Hello everyone! It has been a while since I last posted a thread and I apologize for that. I have been working on this theory for quite some time. Basically, it is the theory of everything. It has some kinks to be worked out, but overall I think you will enjoy it. So sit back and relax, because we are about to go on a very long journey together...

Mysteries of Universe- The Theory of Everything

Since the dawn of the mankind, our species for thousands of years and even today wonder about many philosophical questions. Ranging from; why are we here? How did we get here? What is next in our journey as a species? Is there life after death? Is there a God(s)? Who are we?

As complex as the answers may seem to get, no one for certain can tell us how or why to any of these questions. But I hope to be able to add a theory that seems to combine and to connect the impossible and the improbable. But first, in order to begin this wonderful journey, we must start where "our" universe began.

According to the widely accepted Big Bang Theory:

The Big Bang Model is a broadly accepted theory for the origin and evolution of our universe. It postulates that 12 to 14 billion years ago, the portion of the universe we can see today was only a few millimeters across. It has since expanded from this hot dense state into the vast and much cooler cosmos we currently inhabit. We can see remnants of this hot dense matter as the now very cold cosmic microwave background radiation which still pervades the universe and is visible to microwave detectors as a uniform glow across the entire sky.

[NASA](#)

Basically, the theory states that "our" universe originated from. A dot no bigger than a dot on a page contained a massive amount of energy and most of the matter in the known universe that eventually expanded into what we see today. But that is only the beginning. The question now comes in where did this energy and matter come from? Essentially, the matter has always been and the energy always was. We can understand this from the Entropy laws:

The First Law is that energy is not created or destroyed, [the Second Law is conserved: the total amount of disordered energy is increased, even as a visible increase in order is produced. Thus, though an increase in [entropy](#) entails an increase in disorder, it does so only overall, and therefore as long as the amount of energy that becomes ordered is less than the amount of energy that becomes disordered, any amount of order can arise in a closed system without violating the Second Law.] and the Third Law is that absolute zero cannot be achieved--each of these laws is actually entailed from the first, in conjunction with certain other assumptions.

[Entropy- Simply Explained](#)

*Brackets added by me, information from site, for logical following.

Of course this is not an acceptable answer to many. But once one realizes that we are only one dimension of many the understanding for how this is possible quickly becomes understandable. For each dimension there is a security blanket, preventing other dimensions from colliding with it and to keep dimensions stable. Basically, what I am telling you is that we are the remnants of a destroyed Dimension. How did I arrive at this conclusion? Well let's assume for a moment that the dimension collapsed upon itself for some unknown reason. I really have no idea, so just use your imagination. But once a dimension folds unto itself and begins to break down the other dimensions feel the effects of what is happening. Essentially, they too are at risk of breaking down, because all dimensions are connected through some sort of string or wave. In order to preserve themselves from destruction (much like the dimension that collapsed) they begin to contract and, much like when a woman is giving birth, move energy down the line to where the dimension that clasped is located. This energy is enough to keep the other dimensions from falling and maintaining stability.

Eventually, our dimension regained some stability and began to rebuild itself. Drawing everything unto itself. Essentially, regrouping and after the matter re-stabilized into the dot on your page. It began once again to become extremely volatile rearranging itself over and over again. Attempting to gain enough energy to expand and formulate some sort of order from the chaos that just happened. After it rearranged itself it just needed a little more energy to ignite the spark for the big bang and beginning the expansion. The other dimensions provided this energy and thus the dimension began once again giving re-birth to the universe that we are now in, along with giving birth to the Alternative Timelines. The remarkable thing is that we may not even exist in reality. Due to these events of the dimension collapsing, it had to rearrange the properties of the dimension before us into a recycled continuum.

This is essentially, what we are. Recycled material from long ago. Yet, we continue to recycle our material today. In fact everything recycles in our universe! So where did everything come from in our universe? The plants, the animals, everything? Well we answer this by showing a picture first:

[Art of Greg Martin](#)

Our origins are from stars. Nearly everything really, including Human origins, we are nothing more than star dust. This is quite poetic and interesting at the same time. Hydrogen composes around 70% of our bodies and this person actually explained it in the most simplest of terms that I have seen in a long time:

Billions of years ago there were no elements, just protons and electrons - they grouped together to form hydrogen (one of each particle). Then through weak gravitational interactions they began to form into clouds, massive clouds. Which eventually become denser and denser and their gravity becomes stronger and stronger until they crunch down to form a star, which is essentially a massive ball of hydrogen whose gravitational force causes the hydrogen within to fuse together releasing massive amounts of nuclear energy (like an atom bomb) and converting the hydrogen into partly heat and light radiation and partly other elements. Hydrogen + hydrogen = helium, hydrogen + helium = something else and so on and so forth until eventually you get everything from gold to plutonium. This is how the matter which makes up our body (which is still about 70% hydrogen since the universe is 90% unconverted hydrogen) formed, so yes, we did come from stardust.

[Man and Stars](#)

This puts things into perspective:

Not only are we In the Universe, but the Universe is in us.

-Neil Degrasse Tyson

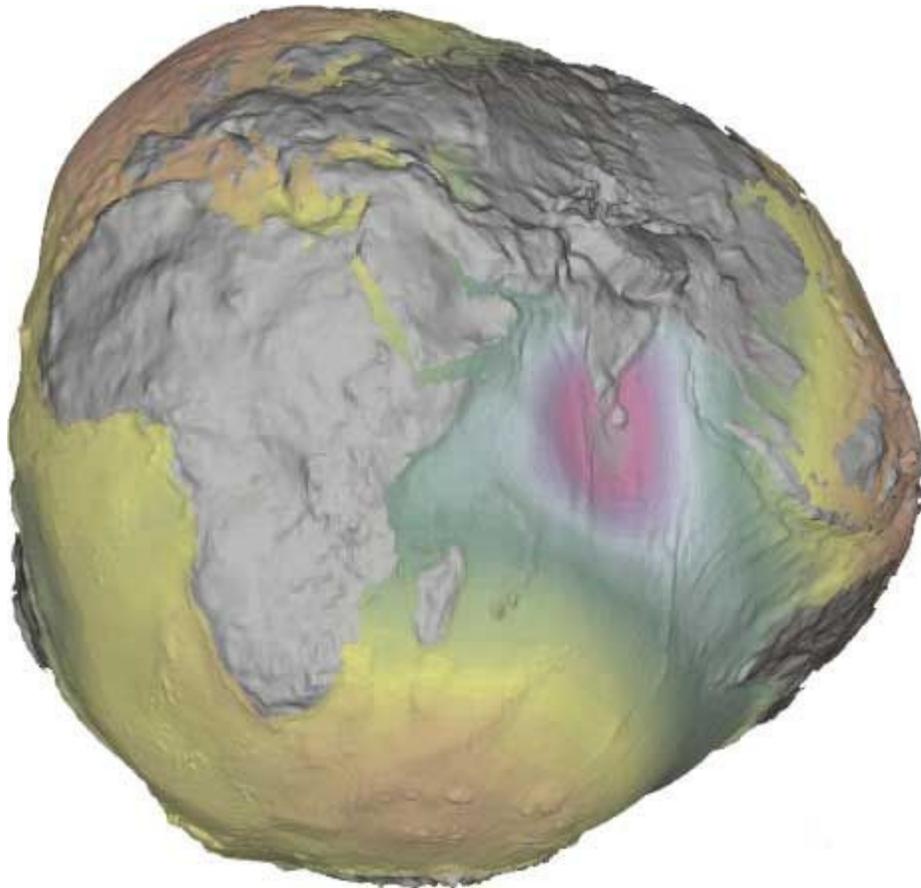

Our universe after all the chaos that rained down gave rise to the stars, which in turn over many more years gave rise to every living thing here on earth.

But what happened before that? How did the earth, come into being?

Well the modern theories of today have a pretty good explanation for that:

From the scientific viewpoint, the Earth would have had to form about 4.54 billion years since the earliest material in the solar system is dated back to about this time period. It is scientifically accepted that the solar system including the earth was the result of a solar nebula that collapsed from the formation of the sun. The dust and gas from the solar nebula took about 10-20 million years to form into the earth starting with the molten centre of the Earth which cooled down to form a crust that allowed water to begin to accumulate. The moon, the main satellite of the Earth is believed to have formed about 4.5 billion years ago when an object that roughly was the size of Mars collided with the Earth causing a significant blow to the Earth. It is theorized that some of the mass became Earth and the remaining chunk begin to orbit the Earth in what is now known as the moon.

[Earth Lives](#)

We can understand how the earth could have been savagely hit by comets and asteroids and gave rise to the moon when we view the earth for what it truly looks like at its core. This is an excellent model demonstrating that the earth is not as it truly appears. The next step is of course life. I will skip the atmosphere part, only because it is a lot of confusion. Which many will not understand and I barely understand myself. However, I will jump at the next best thing and that is the evolution of life on the planet earth. And after the evolution of life on earth. It is going to get very interesting. Because we are going to be delving into evolution, genes, genetics, and a whole bunch more, the MultiVerse (The Alternative Timelines), Aliens, The Wave Theory (My Theory of Time Travel), Cryptozoology, The Brain, The Holographic Universe, Paranormal activity ranging from ghosts, Telepathy, Precognition, Telekinesis, Levitation, and much more, along with explaining dreams, Déjà vu, Collective Event Theory (My theory for how everything is connected) and how the universe, world, and everything will end.

This is just the beginning of an incredible journey my friends. I hope you decide to stay and enjoy the ride until the end. Hopefully, what is presented will astound you, make you think, and make you imagine that the world around us maybe a lot different than what you and I thought.

The Beginning of Life, Evolution, and Genes

We begin with a self replicating molecule. Where has this molecule arisen from? That is clouded with much debate, but once the understanding of what life is we can formulate a much needed hypothesis of where the this molecule arose from.

What makes something alive?

It has to have and maintain cellular Organization. It has to be highly complex and maintain high order. Has to be able to respond to stimuli. Has

to be able to reproduce, grow, and possess molecules that can be passed onto children. Must utilize energy. Must be able to maintain homeostasis. And finally, must be able to adapt, evolve, and most importantly, be able to survive. But now the question is what gave rise to a "living" molecule? Was it non-living molecules? The question is complex in the answer, but the short answer is that everything is alive on a subatomic scale. However, the first self replicating molecules arose from bacteria. Bacteria was the first replicating molecule that was "alive". We call this bacteria, Archaea. Because Archaea would have to survive amazingly hostile conditions and these cells have that ability to survive where nothing else can. These are first replicating cells.

[Image provided by](#)

Archaea though ancient creatures are a relatively recent discovery. Modern science only learned about them in 1977 when they were discovered by Carl Woese and George Fox. Far fewer Archaea are known to science than Bacteria, in fact only 209 species were listed in 1999, but now that more people are aware of, and looking for them many more species are sure to be found.

Most Archaea are anaerobic (living in the absence of Oxygen) and many live in uncommon and extreme environments, i.e. hot springs, Arctic ice floes, highly saline waters and highly acidic or alkaline soils. Many of the world record holders for extreme environments are Archaea. Their tolerances range from 4(C to 110(C, and from pH -0.06 to 9.5, examples are given in the group synopses. Nearly half of the known Archaea are Methanogenic, meaning that they give off methane as a by-product of their metabolic activity. Though many Archaea (singular Archaeon) live in environments which are hazardous to most other organisms, some live much

closer to us and species of Archaea have been found in animal, including in the human, digestive tract.

[The Ancients](#)

Surprising there have been many similarities found from the ancient archaea cells and today's eukaryote cells ([Definition of Eukaryotes](#)) which is what our genes possess. According to Elizabeth R. Barry and Stephen D. Bell:

The archaeal DNA replication machinery bears striking similarity to that of eukaryotes and is clearly distinct from the bacterial apparatus. In recent years, considerable advances have been made in understanding the biochemistry of the archaeal replication proteins. Furthermore, a number of structures have now been obtained for individual components and higher-order assemblies of archaeal replication factors, yielding important insights into the mechanisms of DNA replication in both archaea and eukaryotes.

[Science](#)

Through some processes I believe that Archaea cells gave rise through a mutation to Bacteria cells. This would have happened when the earth entered into a state that threw off the archaea's cells natural replication process; a change in the atmosphere for example. Eventually, the creation of modern day prokaryotic cells ([Definition here](#)) emerged. And then something remarkable happened. Bacteria evolved into a new strand of cells, the eukaryotes. A highly complex cell that was capable of supporting life on earth creating the dinosaurs, the plants, and eventually the ancestors of man. But wait. What is evolution really? Evolution is a term that has been severely disfigured by religious fundamentalists, laymen and even scientists. Which is sad, because evolution has a basic meaning...

Many people do not understand the true mechanism of evolution. Evolution is not the beginning of life or how life started; but rather it is how life changed over time to create the present day animals that we see today. Evolution at its simplest definition means nothing more than: To Change. As long as change is occurring evolution is occurring. No matter if it is cellular or physical. And it does not necessarily mean progress in the species, it could very well hurt the species or the animal. Change has been occurring for billions of years! We can observe it today in ourselves and following it through our ancestors. The missing link or the beginning ape like creature went extinct probably after the first major evolutionary change into an upright walking animal. We know that animals go extinct all the time and

therefore, we can assume with high probability that this first stump of ape went extinct when its newer generation of apes was able to move about easier and access food easier and do things that the older generation could not do.

It is change through a species, very slowly. For instance and example: A male and female human of today mate with each other and give birth to a child with a slightly different genetic trait. Usually the odd genetic trait would be passed down from father to son. Because of the Y chromosome which is basically a deformed X chromosome. This slightly different genetic marker, in this offspring which will be a boy, we will remember as Offspring T. Offspring T then mates with a "regular" woman and gives birth to two more sons. Each of these boys now carry the genetic oddity of their father in Offspring T. Through many more years this gene no longer becomes an oddity, but will eventually become a regularity, through reproduction of that lineage. This will include different prototypical features and genotypes. Now I want to make something clear this will not affect the entire human population! This will affect this lineage alone. They have essentially branched off into a new genetic factor.

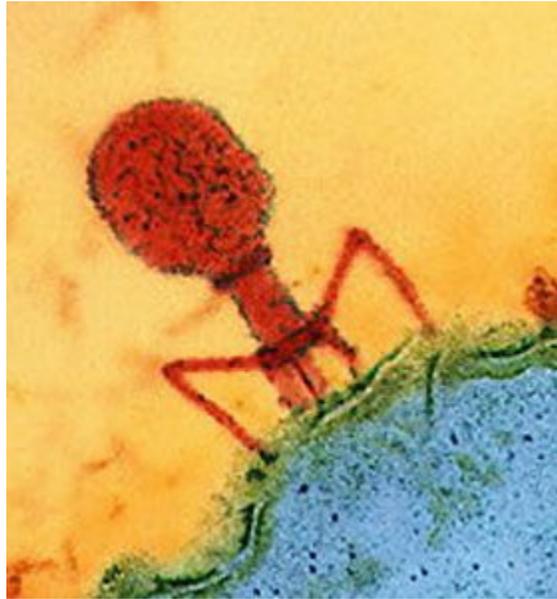

A gene that will give rise to a green skin down the line or stronger bones. Micro evolution does occur, but the change will not be labeled micro, because it is no longer micro when it presents itself. It is at this point very prominent and no longer Micro. Of course you may also say that this is adaptation, but then again you would be wrong, because adaptation does not necessarily require change of the genetic structure to keep the animal alive.

Simply. Evolution is Change. It happens. Its biggest evidence is the fossil record. We have animals alive today that were not around millions of years ago.

What was the ancestor of man, why do we have sex to reproduce, and where did the races come from? The ancestor of man was probably many different classes of the same species that were able to reproduce with each other. This cross breeding allowed for a genetic variety, which is something that is a necessity in today's world.

Sex, is an interesting question, for a variety of reasons 🤔 But the main reason sex is so important was that it allowed for genetic material to be

purged. And if you are wondering what we evolved from besides bacteria; our genes basically give the answer to that: Viruses.

Our DNA is mostly composed of Viruses. Basically viruses are jumping genes (a.k.a Transposons, genes that jump and hook onto other genes or cells and combining with it). We see this today with the HIV virus and how it jumps onto the DNA of our cells and messes it up. We are essentially, at the core of our DNA, a makeup of dead viruses from long ago. Which is truly fascinating. And sex actually arose because of parasites (viruses). In order to combat the parasite we had to find away as a species to destroy the parasites. And that was through sex. Sex purges the genome to protect itself from mutations that threaten the life of the species. A complex process, but a useful tool indeed. And you can find almost anywhere. For instance, with [animals](#) that basically clone themselves through the use of A-sexual reproduction, which is just cloning itself. This process is not very useful if the animal catches a parasite. Cloning brings an end to scientific diversity. Cloning becomes more susceptible to the parasites and eventually dies off completely, because the DNA can no longer code itself properly or the parasite morphs itself into a new animal. Again scary, but highly intriguing...

And now the case of the different ethnicity. The preceding statement is a fallacy and by that I mean the genetic material for whites, blacks, asians, hispanics, and everyone is essentially the same. On a genetic level there is no real difference between any of us. But many people wonder where they

originated from. That is a difficult question that is best answered by a phylogeneticists, which, mind you is more of a philosophy than a science, but it has merits. And very strong merits at that:

Meet the direct decendants of our oldest relatives. The San Bushmen and a special thanks to Spencer Wells for taking this amazing journey and explaining everything in the simplest terms imaginable:

[YouTube Link](#)

If you have time please watch part one and the entire 13 parts series. It is incredible 🙌

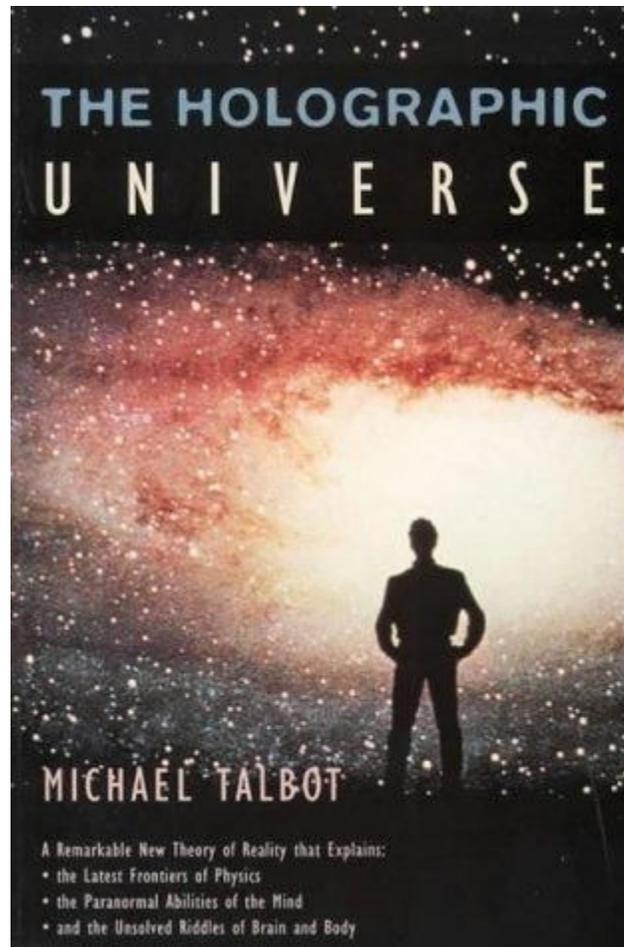

And this concludes the evolutionary and genetic part.

MultiVerse and The Holographic Universe

There is a serious question that needs to be answered and that question comes from the beginning. When the dimension reformed what effects did it have on the universe around us? Are MultiVerses (Not Dimensions) a mistake? Could it be possible that the world of alternative realities is a huge error? Possibly they are. After the dimension regenerated itself it used the recycled material that was once everything in the universe. This would mean that it began the same way that it did long before the collapse, essentially, ushering in a clone of the previous world. We could possibly be an "echo", so to speak, because we actually live in a holographic universe. We could essentially be, in simple terms, a TiVo'ed show from a destroyed time, that as the ability to make changes in certain areas. This is essentially a holographic universe.

In 1982 a remarkable event took place. At the University of Paris a research team led by physicist Alain Aspect performed what may turn out to be one of the most important experiments of the 20th century. You did not hear about

it on the evening news. In fact, unless you are in the habit of reading scientific journals you probably have never even heard Aspect's name, though there are some who believe his discovery may change the face of science.

Aspect's experiment is related to the EPR Experiment, a consciousness experiment which had been devised by Albert Einstein, and his colleagues, Poldlsky and Rosen, in order to disprove Quantum Mechanics on the basis of the Pauli Exclusion Principle contradicting Special Relativity. Aspect and his team discovered that under certain circumstances subatomic particles such as electrons are able to instantaneously communicate with each other regardless of the distance separating them. It doesn't matter whether they are 10 feet or 10 billion miles apart. Somehow each particle always seems to know what the other is doing. The problem with this feat is that it violates Einstein's long-held tenet that no communication can travel faster than the speed of light. Since traveling faster than the speed of light is tantamount to breaking the time barrier, this daunting prospect has caused some physicists to try to come up with elaborate ways to explain away Aspect's findings. But it has inspired others to offer even more radical explanations.

University of London physicist David Bohm, for example, believes Aspect's findings imply that objective reality does not exist, that despite its apparent solidity the universe is at heart a phantasm, a gigantic and splendidly detailed hologram. To understand why Bohm makes this startling assertion, one must first understand a little about holograms. A hologram is a three-dimensional photograph made with the aid of a laser. To make a hologram, the object to be photographed is first bathed in the light of a laser beam. Then a second laser beam is bounced off the reflected light of the first and the resulting interference pattern (the area where the two laser beams commingle) is captured on film. When the film is developed, it looks like a meaningless swirl of light and dark lines. But as soon as the developed film is illuminated by another laser beam, a three-dimensional image of the original object appears.

The three-dimensionality of such images is not the only remarkable characteristic of holograms. If a hologram of a rose is cut in half and then illuminated by a laser, each half will still be found to contain the entire image of the rose. Indeed, even if the halves are divided again, each snippet of film will always be found to contain a smaller but intact version of the original image. Unlike normal photographs, every part of a hologram

contains all the information possessed by the whole. The "whole in every part" nature of a hologram provides us with an entirely new way of understanding organization and order. For most of its history, Western science has labored under the bias that the best way to understand a physical phenomenon, whether a frog or an atom, is to dissect it and study its respective parts. A hologram teaches us that some things in the universe may not lend themselves to this approach. If we try to take apart something constructed holographically, we will not get the pieces of which it is made, we will only get smaller wholes. This insight suggested to Bohm another way of understanding Aspect's discovery. Bohm believes the reason subatomic particles are able to remain in contact with one another regardless of the distance separating them is not because they are sending some sort of mysterious signal back and forth, but because their separateness is an illusion. He argues that at some deeper level of reality such particles are not individual entities, but are actually extensions of the same fundamental something.

This fundamental connectedness would correlate with The Fifth Element, and its mathematical proof of all aspects of the universe being energetically connected - Hal Puthoff's assertion in his work on Zero-Point Energy of all charges in the universe being connected and that further mass is in all likelihood an illusion as well -- and both of these modern day theories of physics being in accordance with ancient traditions and philosophies, which claim the same connectedness of the diverse parts of the universe.

[Holographic Universe](#)

This is an extraordinary find and this is so important, because it essentially, helps out the Multi-Verse.

[YouTube Link](#)

How so? The Multi-Verse states that even though there is an invisible barrier between each of the alternative realities, but each reality is penetrated by sub atomic particles that travel in and out of each reality. This is part of the problem and a reason why Alternative realities could be an error. Sub atomic particles have to travel through different realities and as such encounter different variations of the same thing and risk destroying that oddity that it

does not understand virtually causing more harm than good. This is a chaotic mess, that the sub atomic particles are trying to bring order too. This reality is only one of many. Infact, each alternative reality is a part of the "actual" reality. In essence my friends, each alternative reality is a fragment of the once "whole" universe. The holographic reality is, at its core, part real and part imaginary. As the theory states over and over again. The reason this is so important is that each sub atomic particle traveling into the other realities is trying to maintain and create stability. To regain the original dimension that was once shattered, but not destroyed completely. Trying to maintain stability in chaotic Multi-Verses.

An impressive body of evidence suggests that the brain uses holographic principles to perform its operations. Pribram's theory, in fact, has gained increasing support among neurophysiologists. Argentinian-Italian researcher Hugo Zucarelli recently extended the holographic model into the world of acoustic phenomena. Puzzled by the fact that humans can locate the source of sounds without moving their heads, even if they only possess hearing in one ear, Zucarelli discovered that holographic principles can explain this ability.

Zucarelli has also developed the technology of holophonic sound, a recording technique able to reproduce acoustic situations with an almost uncanny realism. Pribram's belief that our brains mathematically construct "hard" reality by relying on input from a frequency domain has also received a good deal of experimental support. It has been found that each of our senses is sensitive to a much broader range of frequencies than was previously suspected. Researchers have discovered, for instance, that our visual systems are sensitive to sound frequencies, that our sense of smell is in part dependent on what are now called "cosmic frequencies", and that even the cells in our bodies are sensitive to a broad range of frequencies. Such findings suggest that it is only in the holographic domain of consciousness that such frequencies are sorted out and divided up into conventional perceptions. But the most mind-boggling aspect of Pribram's holographic model of the brain is what happens when it is put together with Bohm's theory.

For if the concreteness of the world is but a secondary reality and what is "there" is actually a holographic blur of frequencies, and if the brain is also a hologram and only selects some of the frequencies out of this blur and

mathematically transforms them into sensory perceptions, what becomes of objective reality? Put quite simply, it ceases to exist. As the religions of the East have long upheld, the material world is Maya, an illusion, and although we may think we are physical beings moving through a physical world, this too is an illusion. We are really "receivers" floating through a kaleidoscopic sea of frequency, and what we extract from this sea and transmogrify into physical reality is but one channel from many extracted out of the superhologram. This striking new picture of reality, the synthesis of Bohm and Pribram's views, has come to be called the Holographic Paradigm, and although many scientists have greeted it with skepticism, it has galvanized others. A small but growing group of researchers believe it may be the most accurate model of reality science has arrived at thus far.

[Holographic Universe](#)

In order to make the transition into a completed puzzle severe changes are being made that are affecting us and quite possibly have been affecting us for some time. In fact gravity maybe a leak from one universe to the next. However, there are not infinite universes but many.

The Realm of the Bleed Through

What do Ghosts, The Brain, Dreams, Déjà vu, Telepathy, Precognition, Telekinesis, Levitation, Aliens, The Wave Theory (My Theory of Time Travel), and Cryptozoology all have in common? They are all bleed outs from the alternative realities. In fact some of our oldest bacteria may have originated from these bleed outs. According to my theory of Time Travel which is known as the Wave Theory. A person, animal, or any object is subject to three possibilities:

According to M and String theory, the smallest molecules are composed of strings that give off different vibrations and this is how they are able to travel from alternate reality to alternate reality and so forth. This is one example of a bleed through, a rather small one that has the potential to create big problems. The human body is nothing more than particles built upon

each other. The same holds true for these particles as the smallest molecules, they are strings as well. At the very core of everything are waves that have the ability to flow with other waves if they are on the same frequencies. It is at this point in time when the person voluntary is able to turn there frequencies to a specific flow that it picks up the string and follows it causing time travel. It has been mentioned that the holographic universe has been shown to be revealed to people such as this point in time:

In his book Gifts of Unknown Things, biologist Lyall Watson describes his encounter with an Indonesian shaman woman who, by performing a ritual dance, was able to make an entire grove of trees instantly vanish into thin air. Watson relates that as he and another astonished onlooker continued to watch the woman, she caused the trees to reappear, then click off again and on again several times in succession

[Link](#)

This is an example of a bleed through. Those tree's did not just disappear they went somewhere and then returned.

There are many examples of this throughout history the first civilizations describe objects that could not have been from there time, but closely resemble today's technology. Such as the stories of the ancient nuclear wars, ancient machines, the Egyptian artifacts portraying airplanes, the old stories of White men coming from the heavens, and many more stories of ancient times.

Another example of bleed through are ghosts. Apparent apparitions that appear out of nowhere and quickly disappear. Ghosts could be people from the other side appearing on our side due to the Wave Theory. Perhaps they are picking up signals and following them subconsciously. And maybe this is even possible in our sleep.

What are dreams?

A dream is a succession of images, sounds or emotions which the mind experiences during sleep. The content and purpose of dreams are not fully understood, though they have been a topic of speculation and interest throughout recorded history.

[Link](#)

[YouTube Link](#)

According to oneirology (which is the study of dreams). There are two classifications, Authentic dreams and Illusory dreaming.

Authentic dreams are defined by their tendency to occur "within the realm of experience" and reflect actual memories or experiences the dreamer can relate to. Authentic dreams are believed to be the side effect of synaptic efficacy refreshment that occurs without errors. Research suggests that the brain stimulation that occurs during dreaming authentic dreams is significant in reinforcing neurological pathways, serving as a method for the mind to "rehearse" certain things during sleep.

[Defined](#)

Defined as dreams that contain impossible, incongruent, or bizarre content as the types of dreams hypothesized to stem from memory circuits accumulating efficacy errors. In theory, old memories having undergone synaptic efficacy refreshment multiple times throughout one's lifetime result in accumulating errors that manifest as illusory dreams when stimulated. Qualities of illusory dreaming have been linked to delusions observed in mental disorders.[2] Illusory dreams are believed to most likely stem from

older memories that experience this accumulation of errors in contrast to authentic dreams that stem from more recent experiences.

[Link](#)

When we sleep our brain waves are under going amazing transitions and perhaps in REM sleep, the state in which we dream, we directly affect the Strings of our sub atomic particles. And we are viewing a collage of different alternate realities trying to form into one. We are essentially, seeing the universes dilemma. Dreams are powerful tools in that they allow us to see what is happening in our minds and the universe. Why is this important? Well, the brain is the guide to the body. It tells us that what we are processing from stimuli is reality. Yet, we can also become stimulated in our dreams which have no direct contact with us. We can rarely feel pain, yet we can feel many other pleasures in dreams. I believe that eventually we will not be able to tell the difference between dreaming and our perceived notion of reality. This will make the transition into the completed universe much easier, because we will already be in REM sleep, when our brain can easily flow from reality to reality. Our dreams are our gateway to our true selves and to our true reality.

[YouTube Link](#)

Déjà vu, is from our original universe. We instantly recognize people and know them without even having met them before or recognize places and know where things are without having been there before. And sometimes it is a misfire of synapses. But the overall scope of Déjà vu is much more massive than once thought. It is a powerful tool in helping us realize that what we perceive as reality is not our true reality. The same is held true for Precognition, since we lived this before and we are essentially the echoes of our past, present and future some have the ability to know what is going to happen before it does. Telepathy is basically a concept of being able to follow strings of another persons brain and molecules. They essentially merge and form a communicative barrier where Telepathy is possible. Telekinesis is grabbing onto the strings of an object(s) and manipulating them to fulfill a purpose. Moving them or fixing them in a certain position.

Levitation is the manipulation of gravities strings and since gravity could be a leak on its own, it demonstrates how our realities are rejoining together much faster than any of us could have expected. Cryptozoology also maybe a bleed out, by bringing in animals from other realities. Perhaps it is not just humans, but every animal who can dream can also manipulate the strings. And finally, we have aliens.

Are aliens other life forms in our galaxy? And if so, what does that mean? I personally think aliens are actually other realities bleeding through completely and perhaps another reality is able to do this and is much more technologically advanced than our reality. If so, this proposes a question. Was it one of the realities that caused our universe to fracture? These things become excellent questions, but in the end we cannot control any of it. These are things that we cannot understand, yet they are there. Is there life on other planets in our galaxy? Probably yes. Will we see them? Probably not.

Larry Dossey, M.D., author of *Space, Time & Medicine* writes: Today nearly everyone is familiar with holograms, three-dimensional images projected into space with the aid of a laser. Now, two of the world's most

eminent thinkers -- University of London physicist David Bohm, a former protege of Einstein's and one of the world's most respected quantum physicists, and Stanford neurophysiologist Karl Pribram, one of the architects of our modern understanding-of-the brain -- believe that the universe itself may be a giant hologram, quite literally a kind of image or construct created, at least in part, by the human mind. This remarkable new way of looking at the universe explains not only many of the unsolved puzzles of physics, but also such mysterious occurrences as telepathy, out-of-body and near-death experiences, "lucid" dreams, and even religious and mystical experiences such as feelings of cosmic unity and miraculous healings.

But then why does the creation and evolution of ourselves matter? It matters, because it is all a build up of one cosmic truth. We are all connected. Everything is connected on a scale that no one can see or touch. The evolution of man is necessary in understanding the ever growing change of getting back "home", so to speak. We can now formulate thoughts that have meaning and purpose. We can communicate and most importantly, we can dream. We had to get to this change, because there was nothing before us. Now is the dawn of a new era where we can possibly find meaning.

So what do all of these things mean? They could mean that the fabric holding the alternative realities together is failing and the pieces of the once destroyed universe are beginning to form into a complete puzzle. A puzzle that has been broken for far to long and one that needs to re-establish itself, because it is volatile. It is seeking stillness in a very chaotic way.

The next section is the end of our journey and what a fun one it has been my friends. This is how the world, universe and everything will end, but before that we must examine the events leading up to the end.

The End

The Connective Event theory, is a theory that connects everyone and everything with each other. For instance:

Joe walks into a store. He buys a glass of Milk and walks of the store. He opens the door for Maggie, giving her a few extra seconds in her day. Maggie orders a cup of coffee, thanks the waitress, and gives her a tip, because Maggie was once a worker there and she knows the pay is not very good. Maggie walks out of the store, heads down the street to buy a newspaper. A man accidentally bumps into her and Maggie drops her change on the ground. Maggie has lost 3 minutes of her day after picking up the change and buying the newspaper. She begins to head across the street when a car suddenly hits her, killing her instantly. Maggie is an organ donor and her organs are given to a child who has renal failure, amazingly the child would have died without the Kidney within two days. The kid grows up to be the President of the United States of America and forming peace out of

chaos.

Now there are multiple choices that could have been made here: For one the type of milk that Joe bought, he could have chosen from Strawberry milk to any sort of milk or any drink for that matter as long as the drink is in the store, he could have chosen to take it. This event does not change anything and has no affect on the larger picture of destiny which is Maggie dying and the child becoming President of the United States with her Kidney.

This is problem. If we have lived this before and are, at our core, echoes of the past universe. Does this mean that we have no control of our destiny? Is it already placed out before us to guide us into the transition of returning home? The answer seems extraordinary likely. We are being guided down a path of destiny to return to our "reality". Of course we are able to change little things here and there, but the overall picture is not changeable. Many people state that when they are close to death and reflecting upon what has happened throughout there lives, they talk about how strange it seems that everything connects like a pattern to get them here. Something that I do here, will inevitably affect someone's decision with something somewhere.

This network of destiny is a grand scale and of grand design by the universe in order to fix itself. How will it all end for us? In a long deep sleep. This deep sleep is best explained by death. Death will allow our sub atomic particles to travel into a new realm. But the problem is that our sub atomic

particles cannot rejoin in the original universe, because the pieces of the puzzle are not ready to be joined together. So we either enter another alternate reality or continue on the realm we are on.

[YouTube Link](#)

[YouTube Link](#)

Through constant traveling of our sub atomic particles with other sub atomic particles the gradual merge will be fulfilled. And when it does everything will cease to exist, but then restart on the originally destroyed universe. Everything will be leading up to this event. After the end of ourselves, we will have a new beginning on a universe that we understand.

What is the point of life? Why does the beginning have such a remarkable story of evolution and hostile earth like environments? It is essentially a way of the universe to show us that we are much more important than we believe we are. Our genes have taken an incredible journey to document everything that we have endured and gone through to get to where we are at now. It is the journey of man. The journey of our fractal selves on an imperfect world. It is a journey that will help us arrive at the place where we belong. Somehow and someday it will guide us home.

How will it all end? With the merger of the alternative realities completely bleeding through and forcing the sub atomic particles to restart everything. But this time it will all be a completed puzzle; rather than everything thrown everyone. All of us will become whole again and start a completely different and new journey.

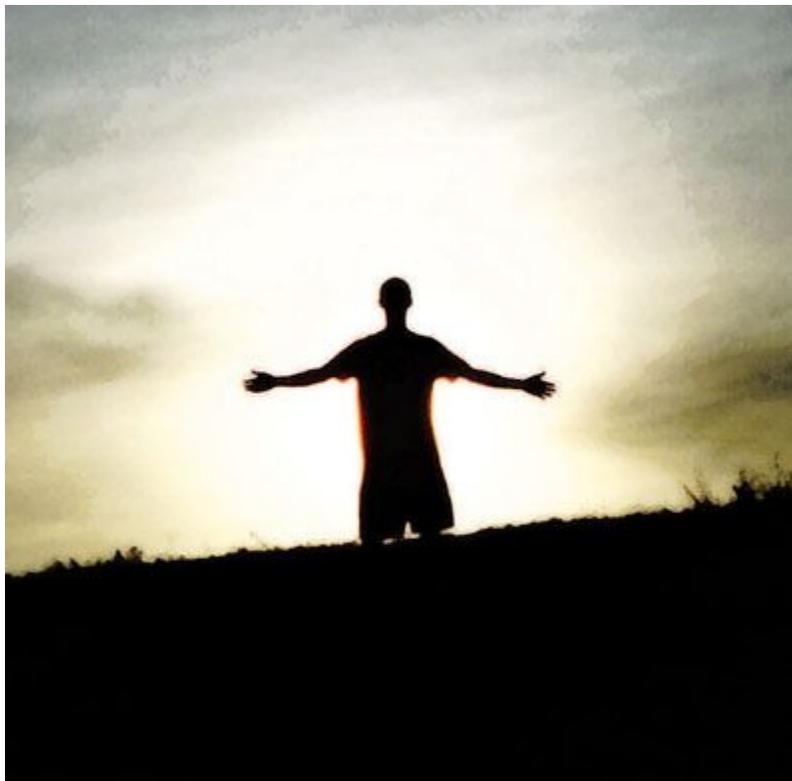

So is there life after death? Yes, there is and there always will be. Remember that we are nothing more than recycled molecules. In fact everything is recycled.

Is there a God(s)? Possibly, in fact there probably is. He/she or they reside on the top chain of the dimensions. They are the parent dimensions giving life to the other dimensions.

Is there a soul? Yes, this is a fundamental part of this. Our being is composed of energy that we cannot see and it is energy that cannot be sensed in the physical sense. It is the energy that drives us forever and gives life back to us. Sub atomic particles are not the soul, but rather tools used to help the soul travel.

And finally, the most important question of all.

Who are we?

I believe that if we are honest with ourselves, that the most fascinating problem in the world is, 'Who am I?' What do you mean, what do you feel, when you use the word I, because it's so mysterious, its so elusive. What you are in your inmost being escapes your examination in rather the same way that you can't look directly into your own eyes without using a mirror. And that is why there is always a profound element of mystery in the problem of who we are.

- Alan Watts

The most complicated and most personal question. How many of you ATS'ers and others who read this can answer this question? I was asked this question and I could not answer it. How do you start to answer such a question. Three simple words that carry much more meaning than any other words. Even more than the most common three word phrase, 'I love you.' These words are so personal and mystical at the same time that they have caused many great thinkers to ponder the question. Who am I? In my understanding, to find out who I am I had to look into others. And find myself with in them. It is not long after that, that I began to realize that 'I am' is more of a 'we are'. We are mirrors for each other. I first had to discover how others and myself interacted, believed, trusted, and grew upon each other. Then I was able to reflect upon myself who I really was. Who am I? Who is TheMythLives? Well I have no idea yet. I have all the pieces of my puzzle here, but no understanding of who I really am. Not yet anyway, but perhaps one day.

Each human discovers who she or he is in an ongoing series of revelations. Humans often have the illusion of inventing themselves from nothing. They often claim to be the authors of their own destiny, but they spend most of their time as passengers in an ancient vehicle on a journey that they have difficulty comprehending. As humans journey through life, they continue to

discover who they are and what it means. If they have choices in the direction of their journey, reasonable decisions are achieved by diligent effort, learning and practice.

The process of individuation depends on the opportunities provided by the local environment and by practicing innate abilities and following innate tendencies. The journey through life is expressed and understood by telling stories. Human stories have inner and outer forms. The inner story teller is an almost continuous narrative process in the mind. This private monologue can be referred to as selftalk. Manifest stories are the daily conversations that dominate human social life. If you had to choose one feature of humans that separate them from all other animals it would be story-telling.

[Self](#)

[YouTube Link](#)

We are all one and the same. On a genetic, philosophical, and universal view point. Connected through complicated means and complicated beliefs. We are the story of mankind and the universe. We carry our origins in our genes and in our souls. We are waiting to become one once again with our true reality. We carry our hopes and our dreams together. We are one. We are a family.

My last question to you my friends is this:

Even though you maybe a fractal of your true self. Do you know who you are?

Thank you for reading this and going on this amazing journey with me 🙌
This journey was inspired by a dear friend of mine who passed away and he

was a member of this site. We got talking about the universe and how things could all be connected on a grand scale. He agreed with my ideas and made me promise that I would release them one day. Some of the thoughts are not complete and you can tell the ones that are not, in fact it seems to enter the realm of FRINGE much more so, than reality. However, I tried my best to apply it with today's knowledge and understanding of science and the possibility of FRINGE science. And I do not fully believe everything that is listed above. It is just a theory at its most basic core. But a promise is a promise no matter how crazy, small or big. I could not have done it alone my friends and I thank you for once again taking this incredible journey with me. If you have any questions at all let me know. And once again take care and be well..... Until next time!

Holy smokes! I can't wait to go thru this stuff! Just wanted to say thanks ahead of time for your effort. I just finished reading Science And The Akashic Field by Ervin Laszlo that takes the next step from, but still incorporating, the TOE. These progressions brings new assurance to the notion of "oneness."

I will return for some feedback! Thanks for providing me with something useful to dig into this evening! 🙌

Peace and WHODAT!!!!

I *raced* here to get in the first flag, and I'll be darned if somebody didn't beat me to it. And I got a sneak preview. Nana nana.!

Fantastic information, and this looks like an ATS great thread should look. Well researched and interesting. 🍷

Back later to read comments and hopefully add to the discussion.

I already posted a portion of this before...

Anyway I will be posting some helpful physics links here...

[oyc.yale.edu...](#)

About the Course This course provides a thorough introduction to the principles and methods of physics for students who have good preparation in physics and mathematics. Emphasis is placed on problem solving and quantitative reasoning. This course covers Newtonian mechanics, special relativity, gravitation, thermodynamics, and waves.

Here are the courses...

[ocw.mit.edu...](#)

These both come complete with exams and solutions as well as video

lectures.

I hope you guys like that.

Along with some tutorials on math for those who are mathematically challenged....

www.mathtv.com...

Here is a series of videos from Caltech called the Mechanical Universe.

There are only 4 here out of the entire 52.

[Caltech mechanical Universe1](#)

Physics Lecture 01: Introduction This preview introduces revolutionary ideas and heroes from Copernicus to Newton, and links the physics of the heavens and the earth. This series helps teachers demystify physics by showing students what it looks like. Field trips to hot-air balloon events, symphony concerts, bicycle shops, and other locales make complex concepts more accessible. Inventive computer graphics illustrate abstract concepts such as time, force, and capacitance, while historical reenactments of the studies of Newton, Leibniz, Maxwell, and others trace the evolution of theories. The Mechanical Universe helps meet different students' needs, from the basic requirements of liberal arts students to the rigorous demands of science and engineering majors. This series is also valuable for teacher professional development.

[Caltech mechanical Universe2](#)

Physics Lecture 02: The Law of Falling Bodies Galileo's imaginative experiments proved that all bodies fall with the same constant acceleration. This series helps teachers demystify physics by showing students what it looks like. Field trips to hot-air balloon events, symphony concerts, bicycle shops, and other locales make complex concepts more accessible. Inventive computer graphics illustrate abstract concepts such as time, force, and capacitance, while historical reenactments of the studies of Newton, Leibniz, Maxwell, and others trace the evolution of theories. The Mechanical

Universe helps meet different students' needs, from the basic requirements of liberal arts students to the rigorous demands of science and engineering majors. This series is also valuable for teacher professional development.

[Caltech mechanical Universe3](#)

Physics Lecture 03: Derivatives The function of mathematics in physical science and the derivative as a practical tool. This series helps teachers demystify physics by showing students what it looks like. Field trips to hot-air balloon events, symphony concerts, bicycle shops, and other locales make complex concepts more accessible. Inventive computer graphics illustrate abstract concepts such as time, force, and capacitance, while historical reenactments of the studies of Newton, Leibniz, Maxwell, and others trace the evolution of theories. The Mechanical Universe helps meet different students' needs, from the basic requirements of liberal arts students to the rigorous demands of science and engineering majors. This series is also valuable for teacher professional development.

[Caltech mechanical Universe4](#)

Physics Lecture 04: Inertia Galileo risks his favored status to answer the questions of the universe with his law of inertia. This series helps teachers demystify physics by showing students what it looks like. Field trips to hot-air balloon events, symphony concerts, bicycle shops, and other locales make complex concepts more accessible. Inventive computer graphics illustrate abstract concepts such as time, force, and capacitance, while historical reenactments of the studies of Newton, Leibniz, Maxwell, and others trace the evolution of theories. The Mechanical Universe helps meet different students' needs, from the basic requirements of liberal arts students to the rigorous demands of science and engineering majors. This series is also valuable for teacher professional development.

What do Ghosts, The Brain, Dreams, Déjà vu, Telepathy, Precognition, Telekinesis, Levitation, Aliens, The Wave Theory (My Theory of Time Travel), and Cryptozoology all have in common? They are all bleed outs from the alternative realities.

Can I ask you a few questions about this part here?

You are saying that if a creature of cryptozoology, for instance a Bigfoot, 'bleeds' into our reality from an alternate reality then the creature is part of an alternate ecosystem? What about mythological creatures? Do they all have their own alternate ecosystems? Hard to imagine an ecosystem in which the Sphinx could evolve. Or a minotaur.

And could you elaborate a bit more on how a telepathic experience, for instance between a mother and her baby, could be explained in terms of alternate realities? One of my areas of interest is parapsychology and I don't think that alternate realities can account for psi. It doesn't seem [biocentric](#) enough for me.

I think a Jungian psychophysical approach can unify all of those seemingly separate phenomena without the need for alternate realities.

The Beginning of Life, Evolution, and Genes

What makes something alive?

It has to have and maintain cellular Organization. It has to be highly complex and maintain high order. Has to be able to respond to stimuli. Has to be able to reproduce, grow, and possess molecules that can be passed onto

children. Must utilize energy. Must be able to maintain homeostasis. And finally, must be able to adapt, evolve, and most importantly, be able to survive. But now the question is what gave rise to a "living" molecule? Was it non-living molecules? The question is complex in the answer, but the short answer is that everything is alive on a subatomic scale. However, the first self replicating molecules arose from bacteria. Bacteria was the first replicating molecule that was "alive".

It's weird, for me, to think of survival as a requisite for life. Since everything living dies, nothing alive, ultimately, survives. In fact, it almost seems like the inability to survive happens to be a characteristic of life. Interesting thought, though.

It's also weird to suggest that the first living thing emerged from living bacteria. Confusing.

Still reading/enjoying ...

What about mythological creatures? Do they all have their own alternate ecosystems? Hard to imagine an ecosystem in which the Sphinx could evolve. Or a minotaur.

And could you elaborate a bit more on how a telepathic experience, for instance between a mother and her baby, could be explained in terms of alternate realities?

I will take one at a time for easy following!

You are saying that if a creature of cryptozoology, for instance a Bigfoot, 'bleeds' into our reality from an alternate reality then the creature is part of an alternate ecosystem?

Essentially, it is very plausible that this is true. It could also be a different species completely. Remember, that alternative realities will mimic each other and in the ultimate goal of attempting to mimic the true "reality". However, there are inconsistencies or mutations in the other realities. That may result in some strange creatures that have evolved on that reality.

What about mythological creatures?

Again, I assume it is plausible, because of evolution giving rise to different species of creatures. Of course it is also possible that the majority of creatures talked about are just ideas or people jumping to the wrong conclusions.

Do they all have their own alternate ecosystems? Hard to imagine an ecosystem in which the Sphinx could evolve. Or a minotaur.

well I would assume that they are not all COMPLETELY different. But they probably have some different animals. Remember the alternate realities are trying to sustain themselves and keep balance with each other. Thus, they will closely resemble each other, but be different in their own way.

And could you elaborate a bit more on how a telepathic experience, for instance between a mother and her baby, could be explained in terms of alternate realities?

Well not everything is the result of alternate realities, but they do make up a

good portion of "events". Remember that we are all essentially recycled material of the same cloth. Therefore, we are not different from each other and a mother being able to communicate with her child is perfectly explainable in the realm of science. connection from mother to child, because she is the host and influences the babies needs. They technically become one with each other for a period of time and learn each other. No need for alternative realities there.

Spencer Wells video with the San Bushmen was enormously enjoyable, and it was interesting to see how he engaged with them. I haven't finished watching all 13 segments yet, but am going back now.

Also, don't I remember carbon, somewhere along the way in our evolution, is what arrived upon the scene allowing all the little ooey-gooey things to stick together! Poor carbon. Everybody always neglects it and takes it for granted.

Great thread. Interesting and entertaining! 👍

When you say, 'ultimate goal of attempting to mimic the true "reality", I wonder what you mean by that. Mimic a true holographic reality?

Are you suggesting that a reality can have a goal? Is it alive?

How do inconsistencies or mutations in the other realities come about? I mean if consciousness is the mechanism then these realities you are talking about sound like [reality tunnels](#) to me. Have you read *Prometheus Rising*?

I have been searching around for a thread on this sight that looks like the person posting knows a bit about higher level physics. I am hoping to get your input on this as it directly relates to you later postings of a 'holographic' universe, or a multi-verse, but the truth is, I would just like some honest feedback to see where this does or does not hold water. This thread seems like the perfect place.

Before Newton no one walked around asking "I wonder what keeps me stuck on Earth. Even if birds fly, they do not wander into the Heavens".

People

simply walked the Earth. Then Newton had a moment of Intuition,

Knowledge

without a reasoning process, clear insight into the nature of things and he

saw

there was a force that pushed down on us. I had a similar moment of

intuition.

If you would, please try to suspend as much as you can this one concept: Try to imagine things as they are, that physics perform exactly as they do, except

to get from 'here' to 'there' is not a passage 'through' time. Set aside the idea. I still get from A to B, still walk the Earth, just w/o a concept of how long.

I'll begin by saying that the the first three spatial dimensions we know and can describe w/o issue. The 4th is the only one, in conspiracy w/ other forces, that literally kills us. Time is not perspective. If Einsteins twin/C theory is correct, when my brother comes back he is alive and I am a very real kind of dead. This is not a 'labeling' issue. It would be like saying the Human Species is a mountain range because we live on Earth.

Weak force (A-bombs) cause EMP's and EM Force dissipates. At the edge of an event horizon Time stops. Everyone is wondering why gravity is so weak compared to the other forces (I did read about multidimensional theories regarding Branes), I think Gravity is weak because Time is strong. The other 3 dimensions are not affected by the Forces this way (the properties of the dimension). EM Force doesn't make buildings shorter or wells shallow. But the 4 Forces can destroy/affect matter. Time does too.

We have a concept of space-time today. Why not space-gravity or space-radiation? They are their own forces in the universe. So is Time. Maybe because we see it as linear, because we measure change by it, that time is a 'scale', but it behaves like a whole lot more than that. It behaves like a Fundamental Force of Physics.

I hope that that the idea of Time being a Fundamental Force of Physics (FFP from here on) is new. I'm writing on the occasion it is, the following is the significance I see that this nature of time may have.

Time is measured from a human perspective, not in any true meaningful amount. I mean in the sense that we might measure the half-life of an atom. We measure it for perspective, to plan other events. No one measures Time like we would a FFP. We wouldn't try to. I would like to use this example to break things down: We are familiar with the A-bomb, the splitting of atoms. That is possible because we developed a concept of Strong and Weak nuclear force. That came about because

we developed a concept of Atoms. The concept of an Atom was developed, adopted and accepted before we ever saw one.

Now look at Time. I'm going to 'walk the dog' forward here. Let's say that along with Atoms, Democritus thought of Time as, I'm just calling it this, a building block of the universe. Now, we have Time on the same level as an Atom conceptually. Down the line we develop a concept of Time Force. Then we develop a concept of how to manipulate it. Then we build a machine that can manipulate it.

(I'm going to quickly finish with one follow up post, I'm almost done, I swear.)

I have read about some of the issues we have with Tachyons. Our big problem here, and Sir I am going to get about as basic as you have probably heard in a while, is that Tachyons move faster than light. I don't mathematically know the specifics but basically they can't exist at subluminal

speeds, so most people are saying 'if it isn't broke...' and others are trying to use them to disprove string theory. I've read a bunch of articles that talk about 'Blank' and Time don't mix so it didn't work. Maybe we aren't mixing the right way. If we had no concept of atoms and someone wanted power on the level of Nuclear Fission we'd be thinking in circles about that too.

Time as a FFP gives Physics a whole new set of tools to reseed our garden here. Physics is hoping for a way out with LHC, with Dark Matter etc... We knew something was wrong when the General ToSR and Quantum Mechanics didn't mesh. I think this is what's missing. Our human perspective got in the way. It's another 'space is full of Ether' and 'everything is made of water' issue. If there is something legitimate here, again, please let me know and pitch this thing. I'm not pals with Steven Hawking, I don't have any legitimate contacts in the physics community. I truly look forward to hearing your

thoughts.

Deeds203

P.S. A friend does not see how this could be possible. She mentioned that we pass in 1 direction (but pass through the 3 others on 2 directions per dimension). My final thought goes back to Augustine and his 'explanation' of Time. Time as we understand it developed because Man needed a way to leave 2 separate places and meet together @ specific coordinates. [Hypothetical] If Man evolved with a hive mind, his concept of time would be very different because there would be no distance between us, no reason to coordinate departure. Time would conceptualize to trap food and survive seasons but it's hard to argue our view would be the same.

Not many argue today that Time would exist w/o the Human species. So why is it that Time is so terribly impotent, it's only effect to mark significant events? If we did not exist, Einstein's theory would still hold true. If you view Time as being a dimension and not a FFP, I would ask if you think Time has 0 effect on the degrading or creation of matter. The spatial dimensions do not, Length and Width cannot topple a building, but Gravity and Time can. Radiation and Time can. Nuclear Force and Time can. The other Forces affect everything, literally everything. Light, Mass, what we're made of, what the Sun is made of, etc... So does Time.

Your confusing the alternative realities which are fractures to the true

completed puzzle reality of the past. Mutations take place because of a discrepancy of gene replication.

Are you suggesting that a reality can have a goal? Is it alive?

The reality itself? Yes, it is alive because of the other dimensions. Reality is 'alive' because if it were not consciousness could not take place. We are experiencing a reality that is fractured as of this moment. Due to the dimension collapsing long ago.

It looks to me like you want a reality that is both 'alternate reality' centered and 'consciousness' centered. IMO it should be one or the other. Don't get me wrong I like a lot of what you say but it think all of that can be said more efficiently from a Jungian point of view. I'll use Occam's razor here and claim that the idea of alternate universes is unnecessary. I'll also say that the idea of a collective unconscious IS necessary. But not as sexy. :p

If we visit the alternate ecosystem that Bigfoot evolved in, then I'll change my mind. I have experienced many of the phenomena you named and so I am inclined to understand them but I have not as of yet experienced an alternate universe. I suspect a visit to such a place would be indistinguishable from a phantasmal 'fairy realm' like Avalon or Shangri-La or Eden.

[edit on 27-7-2010 by Student X]

I was watching something on the science channel the other night and apparently, a very new theory about the big bang is currently arising in the science realm. I didn't catch the entire theory, but it's based on that fact that

two different dimensions "collided" and that force created the Big Bang. So, the bang was not really the birth or start of something out of nothing.

Also, you have to keep in mind that time does not move. Thereby, the movement of time is an illusion. There is only one eternal moment and everything within that moment is forever changing at every dimensional level. Thereby, there was no beginning or end to God (or the universe)...because time doesn't move...we move through time.

Originally posted by TheMythLives

Very interesting points; however, universal 'consciousness' is real.

Agreed. 😊

"There is a continuum of cosmic consciousness, against which our individuality builds but accidental fences and into which our several minds plunge as into a mother-sea or reservoir." ~ William James

There is a universal consciousness, and a universal unconsciousness. By the same token, there is a personal consciousness, and a personal unconsciousness. There is a subjective psyche, and an objective psyche. There is the personal, and the transpersonal. As above, so below. 🌀

Gaining the right altered state of consciousness is the way for a shaman or mystic to traverse the collective unconscious and the mythological worlds therein, and I wager it is also the way to travel to your alternate worlds. That would mean that the Alien/Ghost/Angel/Bigfoot/ that comes from one of your alternate worlds is really a psychophysical manifestation of the collective unconscious in symbolic form. An archetype. That is to say, a

dynamic pattern in the collective and/or individual psyche.

Have you read this? [Flying Saucers : A Modern Myth of Things Seen in the Skies](#)

The problem arose when the dimension fell apart and it essentially ripped apart 'consciousness'. We are all alive in the alternative realities, we all have 'consciousness', but it is not our true whole 'consciousness' that was ripped apart long ago. We, as well as the dimension is seeking to reunite with our whole 'consciousness'. Excellent questions and comments! I like them my friend 🍷

Well...the words dimension and alternative reality seem unnecessary. It looks to me like you are describing the mystical unitive/PCE experience and what it is like to fall out of that cosmic state and back into everyday ego-consciousness.

After reading through your whole post, it made me do my own thinking, you definitely opened my eyes to many new possibilities of our existence, but I also got worried. I don't want to think I am nothing but a hologram, and to be honest, living your life is better than thinking about it. But as I was eating I had a thought, when my mind side-tracks, my body is still performing actions, such as eating, tapping my foot or scratching myself, and that made me wonder, was it really me performing these actions, I was focused on what I was thinking then rather my finger scratching myself, something from maybe an alternate universe, enters my body, and just continues these actions for me, like nothing happened, and as soon as I remember what i was doing, I stop... This made me feel weird, I don't like the thought of having something else take control of my body either.

I guess I didn't explain it very well, but just a thought...

No, very interesting indeed 🤖 Made me think also, but I think that you could

be right on a certain scale. Kind of like when you lose your train of thought on something and wind up doing something else. But I think that is just the brain misfiring and of course the brain keeping us alive. I am glad you enjoyed the thread and if you have any other ideas just let me know. Would be interested in hearing them 🙌

Ok my friend. Finished reading and dissecting your posts. It seems like you have some good ideas in theory, but there is a major problem. "Time" is not constant by any means. For instance, Mars takes longer to orbit around the sun, than it does earth. Also black holes do not have time and they destroy light energy. Time does not exist in them. While things do rust and tend to break over a period of time, it is not because of time, but rather external variables than time. Metal oxidizes, because hydrogen molecules rip apart the oxygen molecules off the metal. Not, because of time, but because of environment. The general understanding is that 'time' does not exist in the external world; however, it does exist in an internal fashion. For instance, our cells, know when we are going to die. It is coded in us for when we will pass.

I think Gravity
is weak because Time is strong

Gravity is weak, because the force behind gravity is unknown. In essence our bodies overcome gravity everyday. The atoms inside us are able to fight off gravity and keep us alive and upright. And here is another issue:

Forces can destroy/affect matter

Matter cannot be created nor destroyed, but it can be changed into a gas to make it appear 'destroyed', but it cannot and will never be destroyed. I do not view time as dimension at all. And I am not sure one can really view time at all. Time is in essence a measurement at its heart and core. A measurement of when a meeting is going to take place. But never is time a constant. Even on earth, it is not constant, things evolve faster than other things. The time zones are an excellent example. The other distant galaxies do not have the same time. Time is a concept of human reality to keep us sane. Great theory though. I would still try to get it into a community of scientists. Try everything, just because I gave my opinion on it, do not take that as TRUTH, because I could be wrong. Email Physics today and see what they can tell you.

It was Joni Mitchell who wrote and sang 'We are stardust, We are golden', a beautifully poetic lyric that seemed too magical to be literal. But after reading your thread TML it seems that I have been missing the obvious all this time 😊

I never knew the following either...

Our DNA is mostly composed of Viruses....We are essentially, at the core of our DNA, a makeup of dead viruses from long ago.

...although a brief look around this planet it becomes obvious we are a virus.

Genetics and DNA is something I have never really looked into, mainly because I get the feeling that I could study it forever and never understand it, but I'm certainly going to be keeping an eye open for a good book on the subject.

I really loved the Spencer Wells documentary you posted too, I watched all 13 parts and found it fascinating. It's unbelievable to see that the origins of the human race can still be found living today, as they did thousands of years ago, in Africa. Awesome.

I have also read the book 'Holographic Universe' by Talbot and absolutely loved it. I thought I would get lost in complex terminology and technical terms but I found it an easy read and completely compelling. Definitely one of my favourite subjects 📖

The following video is a talk by one of my favourite writers and speakers Douglas Adams, I think you might like it...

Douglas Adams: Parrots the Universe and Everything

[YouTube Link](#)

I'm sure if Adams was to have made this thread it would have consisted of nothing but the number 42 🤖 Far less interesting, but not necessarily less accurate. Which brings me to one of my favourite Douglas Adams quotes...

“There is a theory which states that if ever for any reason anyone discovers what exactly the Universe is for and why it is here it will instantly disappear and be replaced by something even more bizarre and inexplicable. There is another that states that this has already happened.”

We have spoken about some of your ideas before Myth so I wont go into any more detail regarding them, needless to say I think they are great.

I may post again after reading over it tomorrow, still taking it all in, great job mate 🍷

And never forget, life is just a ride...

Thank you so much for this amazing post! I'm not sure I understand even half of it, but it did resonate with me on some level.

May I ask a few questions?

When we see pictures of the earth taken from space, the earth looks round. I've heard before that the moon might just be a piece of the earth--but then why wouldn't they look like pieces of something broken instead of round spheres?

Where does wisdom come into the "recycling?" Where do the moral aspects of life fit in, such as, "do unto others?" So much of what we hear in the New Age realm has to do with wisdom and values and universal truths. Yet, your theory doesn't incorporate such things. It sounds more impersonal....we just die and go somewhere until we're recycled. What about being a "good human being" etc.?

Why did the original Universe break apart in the first place? What happened?

Thank you kindly for your answers.

I enjoyed reading your theory very much.

reply to [post by TheMythLives](#)

Dude, i think i finally have 20 posts after an insane amount of writing. I'd like to ask you to please give another try here cause i think you may have

lost sight of one primary thing and that is 'suspend any concept of a need for time required to move from point A to point B'.

Your example of it taking longer for Earth to move or Mars to move, or perhaps it was that Time moves slower/faster with respect to the gravity of a planet (based on mass, cause it would, i don't think that was your point), is exactly the concept i was trying to have you suspend.

More like this. Earth and Mars move through the 3 spatial dimensions. It does not take longer for either to arrive anywhere because the start and end points are arbitrary. they simply move through space. Those 'Karatons' may produce a linear effect on the human perspective, and of course we would need a way to coordinate them (the planets) syncing up, but the universe could care less about which took longer to arrive when.

Next, I'm not sure where you got the idea that i was saying that Time was a constant. It is currently viewed as more of a constant. My theory was implying behavior like that of Atoms or Gravity. So in the sense that Atoms are constant and Gravity is all around us, yes. But we can also interact and manipulate both of those, thereby invalidating the label of 'constant'. This will lead me to, what i think was my last miscommunication with you, regarding Karatons.

You said that 'metal rusts over time, it oxidizes not because of time but because of the environment'. Again, please try to remove the concept from before. Because using that concept, the only way that it can oxidize is in conjunction with time. If time were 'frozen' the metal couldn't oxidize. here is the simple parallel in my theory. Again with 'Karatons', saying they give the effect on human perception of linear time, say they were to stop moving, a la absolute zero. Our perception would be that time has frozen, the Karatons would stop interacting with the Atoms, no oxidizing. [Karatons are Time Particles interacting with the atomic particles that are oxidizing the metal]

'The Reason why Gravity is weak is unknown', was sort of a major point of my theory, brother, the high population of Karatons in relation to Gravitons in areas with 'light' gravity, OR an a very FEW Karatons around black holes (producing the perception of eternity) was really my explanation as to why time changes proportional to gravity. Again, this isn't perception. Einstein's twin/c theory has one Twin age at a normal rate, while the other ages

extreme slowly (oddly enough at incredibly high speeds). You mentioned at the end of your post that time is perception, but it really isn't, it bends. Mythlives, that's why we call it spacetime and factor in lightyears/gravity around black holes.

Your view that time is not a dimension does not match the general consensus of science. Time has traditionally been viewed as the 4th dimension as it was utilized with the other 3 spatial dimensions extensively in the ToSR. Google it today, you will get a bunch of tesseract webpages.

I'm down with the "Matter can't be destroyed statement", the backlash should have tempered the severity of my word choice. Matter can be rearranged, possibly converted - but this goes to open and closed systems and is outside the needed areas of discussion to my knowledge. Feel free to bring it up if you think I didn't fully resolve this. I should have said, "Forces can degrade/affect matter" and my Karatons would do just that in this theory.

Please take your time to contemplate my response, there is no rush, I want to get this right. Did I address your concerns. If not, what's left, if so, do you agree with my theory. If not, what's stopping you?

This is no less wacky than dark matter or a holo-verse my friend,

Best Regards

One last thing, in case you do decide to saddle up here amigo. Just so you get this. Remember what I said about Democritus? If Karatons were conceived 2k years ago then it stands to reason we would have developed a functional theory of 'Chronography' (ooh, made that word up, it's a map of

karaton particles as applied to the universe) not in the sense of a record of history.

With a working theory of Karatons we will have invented a machine along the lines of the electron microscope. See Myth? Time can be measured/detected, in this theory, and it is a seriously logical theory. There is no reason for this not to have been developed except for humanities ego centric nature. Earth is the center, the sun is the center, the milky way is the center. Time is just one more aspect of that.

I remember now! My Levitation theory, it goes like this...

Ever felt that feeling, when you are just laying in bed, trying to sleep, mind is clean of thoughts, then you suddenly jump, scared and thinking you were falling. It's that falling feeling that made me think, why does it happen? My theory is that your head is so clear of your thoughts, that you actually do a "String Theory" in ways of levitation, you set your body to zero gravity, you actually don't fly up.. or even down, but its the zero gravity feeling that makes you feel like your falling, imagine being in space and there's no up or down, your just floating with no weight what so ever tugging on you, this feeling you're not used to and so you jump, and you suddenly lose this sensation, and lose your float. I wonder if this is how people manage to levitate, they control this unique experience and train them selves to be able to experience at their own wills?

reply posted on 29-7-2010 @ 04:12 PM by

I enjoyed reading your thread...

You wrote... Quote;

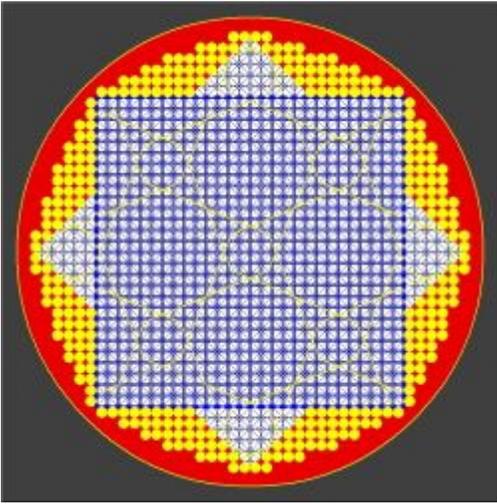

We are all one and the same. On a genetic, philosophical, and universal view point. Connected through complicated means and complicated beliefs. We are the story of mankind and the universe. We carry our origins in our genes and in our souls.

Most of what you have disclosed I would agree with...

Here is a little I would like to share with you, regarding the beginning of the All.

Here is a **100%** accurate Drawing of The Partition Map of The Soul. Parts or Components and an edited form of this drawing below can be found in

Architectural decor all across the World in All cultures and religions, but it is **Not** my intension to discuss religion here.

This Involves a geometric based Processing System and is the base Map only.

If all the components were shown all you would see is a Black Disc.

Colour Codes are used and this format is used in innumerable ways.

For example such a format is used to produce the generations of Souls. These are in the Holes produced by the Partition Map of the First Soul. The Holes that are used are the Square Holes. Each of the Square Holes contain a cloned form of the Partition Map of the First Soul. And if we look into the Square holes of this Second Generation we find in each of Square Holes yet another Cloned Partition Map in each of theses forming the third Generation and so on through innumerable Generations all within the First Soul.

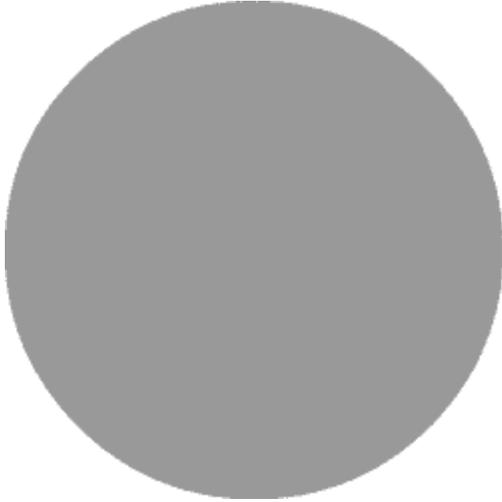

All the Souls (“Processing Systems”) are linked together by the Lattice Work forming the Partition Maps in unlimited Conceptual Layers.

But where all this came from was the Separation of Darkness (Lacking hue claimed by the human species but I say Darkness lacks Contrast) ie a mixture of Black & White.

(Please excuse the Quality of the following animations.)

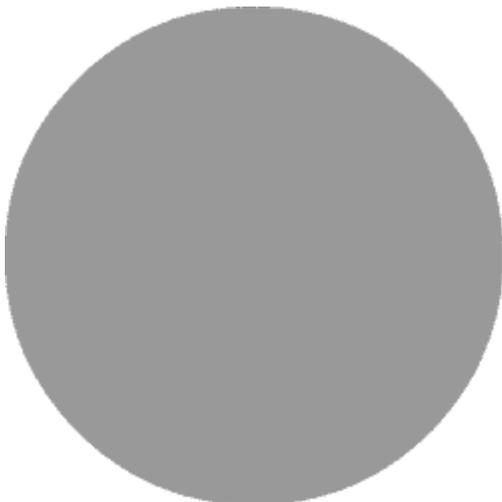

First the Separation of the Components of “Gray” forming a particle of Black.

Animation 001

Second a particle of White.

Animation 002

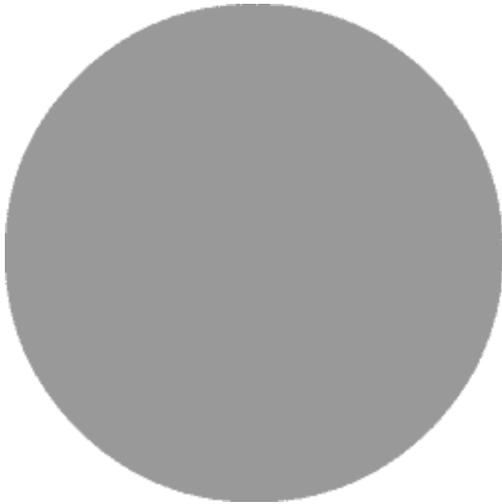

Each of these are stored in a "Plane" which has of course **2** Faces (Outer Faces) One separation forming one Particle in one “Face” and the other Separation in the Other “Face”.

At this stage the Faces are only separated by the existence of the “Plane”.

Now if we take this “Particle” and apply the first Movement of “Awareness” we find a **To & Fro** Action of two different natures.

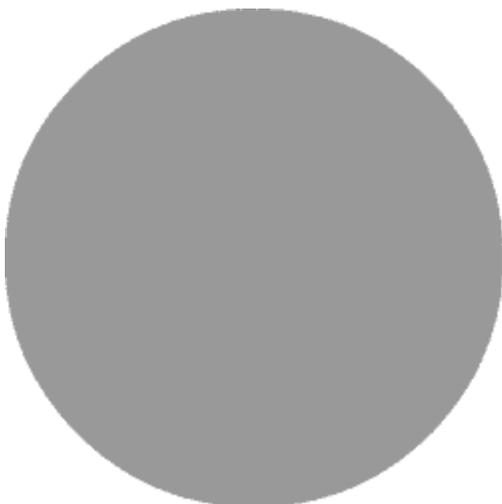

First involving a single Particle.

Animation 003

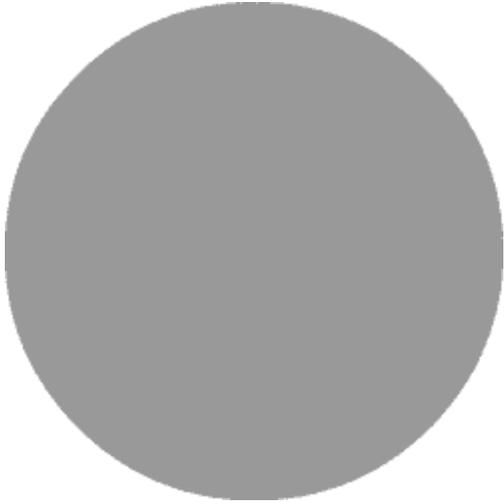

Second involving a "Stream" of particles.

Animation 004

Then the stream passes through the Centre.

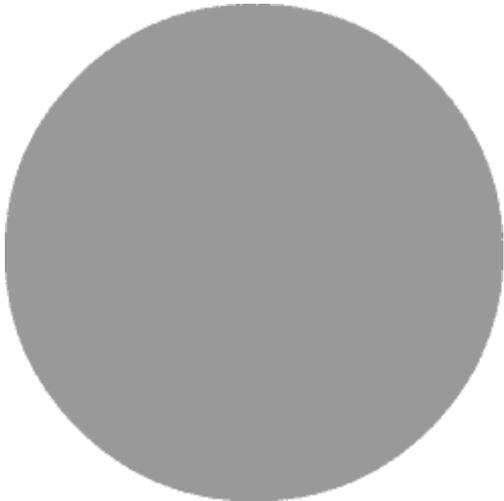

Animation 005.

The Second movement of Awareness, is applied and that is Rotation.

If you watch this animation from about 60 cm or 2 feet away from your screen, you will be able to see a cloud of granules in the Black following the Rotating Line...

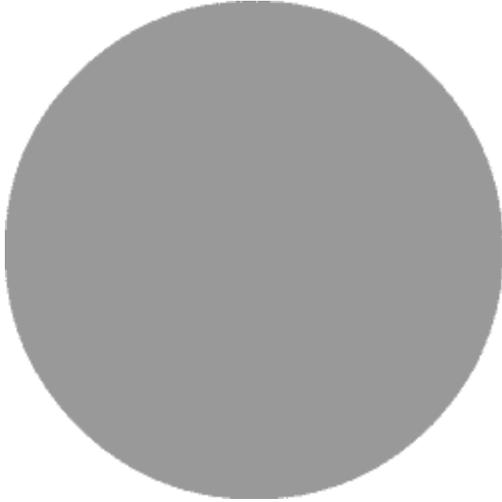

Animation 006

And if we Remove a section, out of the rotating Line and apply 12 Rotors

(24 Lines) we see in the Centre, a Black Disc displaying a Granular texture like Yellow Dust.

Animation 007

What you see here is a "Holographic Transfer Media" seen by the Mind, which is in this animation, devoid of Data.

Information can be introduced into this Granular Texture.

If you close your eyes in a well lit area (from indirect Sun Light) and relax, Preferably lying down, and watch what you see in your vision with your eyes closed.

As you relax deeper your vision will soon be filled with a similar Granular texture, but instead this texture is part of the "Operating System" involving your Soul and can only be seen by the Mind, Awareness, Consciousness, Spirit or LIFE whatever name you wish to give it.

Note carefully the appearance of this texture in your vision.

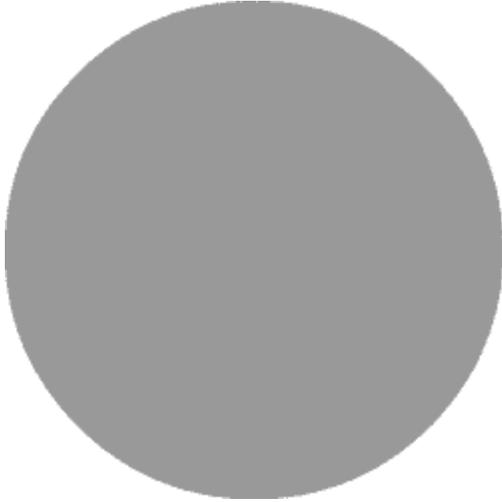

Pay attention to both...

- a.** the Colour Content of the Granules.
- b.** The movement behaviour of the Granules (moving in Eddies and forming shapes).

The Second Rotation (as all things exist in pairs.) involves the hiding of these processes within Line work and how all is stored conceptually in line

Work, whether straight, curved or irregular shaped line work, comprising of the first two, straight and curved.

Animation 008

And you wrote... Quote;

We are waiting to become one once again with our true reality. We carry our hopes and our dreams together. We are one. We are a family.

Indeed we are.

Again quoting you;

My last question to you my friends is this:

Even though you maybe a fractal of your true self. Do you know who you are?

Yes I do.....

Wow, I am pleasantly surprised by how many people have viewed this thread and are enjoying it! I am glad that you all decided to stop by and comment on this magnificent journey. To all of you, I appreciate the kind words 🙏 Now for some questions:

reply to [post by Student X](#)

It looks to me like you want a reality that is both 'alternate reality' centered and 'consciousness' centered.

Very interesting points; however, universal 'consciousness' is real. The problem arose when the dimension fell apart and it essentially ripped apart

'consciousness'. We are all alive in the alternative realities, we all have 'consciousness', but it is not our true whole 'consciousness' that was ripped apart long ago. We, as well as the dimension is seeking to reunite with our whole 'consciousness'. Excellent questions and comments! I like them my friend 🍷

Everyone, I am pleased that you all learned something about things you have not known about before. I also tried to make it as simple as possible to understand and I am glad that my efforts have paid off. Keep the questions coming and keep the comments rolling!

reply posted on 27-7-2010 @ 12:18 PM by

I don't want to bring religion in on this topic, but the concept of heaven is obvious here. If particles are being recycled to fix themselves and each reality is doing this, then the further along the road there exists a reality where all particles are ordered perfectly. The lower ordered realities could be seen as hell. Nice thread though. I bet this will be the religion of a future, technology based society.

And the question about mythical beasts: I think that most of them are symbolical and aren't real.

Great thread! Glad to see it focuses on important things rather than the usual NWO filler.

Also, I have a feeling that the world won't end ever. I think that the Earth is going to keep recycling things too, at least until the sun burns out. Some of our souls transcend and others won't and just stay here for more "fixing". My two cents.

[copyright & usage](#)

reply posted on 27-7-2010 @ 12:50 PM by 

Excellent thread S&F.

The thing that i ask myself is where does it all start? Is there a beginning to all this on a multi universe scale. Is it human nature to have a absolute beginning to everything.

Where did God come from?

From a youtube movie that i can't remember the name of someone suggests a simply endless universe, no start and no end. Endless recycling?

Something just cannot exist out of nothing right?

You may be right about the viruses but sex isn't just to combat viruses its also a mechonism to cope with changing envirnmental factors,not just DNA the dinosaurs wouldn't be able to breathe today

Also I think there is another form of energy, life energy.

Energy can not be created nore destroyed so we came from somewhere

There is some force which says smashing certain molecules together results in life otherwise they would still be just some random melecules thst stuck together,why does this result in life?

I read somewhere, I thought it was a relatively obscure paper at the time, that there are multiple iterations of the universe. It started at a singular point, then the big bang, then expanded until it reached the end of its ability to expand and then rapidly contracted back to a singular point. Then another big bang. And this has been happening for an eternity. Interesting theory.

But being as the Universe is expanding it eventually has to stop. And what happens when it does.

reply to [post by TheMythLives](#)

Well, that sure is an interesting theory, TheMythLives.

I'm not sure I can say I necessarily agree with it but that's just because I see things differently.

Personally, I've always believed "*The Big Bang*" and "*Creation*", from the Bible, as one and the same, however what is told to us is a lie through separation.

Meaning, Government through science, wants us to believe one thing.

And the Church, take your pick, wants us to believe another thing entirely.

Divide and Conquer, my friend, divide people against themselves, and leadership can control the people, through control mechanisms, set into place.

Man wrote the Bible, it was physically written by men, men have agendas.

God however does not.

And man came up with the concept of time, the clock, calendars, and naming seasons.

Even if it might have been inspired by God or even "God", if you believe in that.

Who are we as mankind to force God to our concept of time itself?

What if one of God's days, you know, the 1st day, 2nd day, etc, is a million years?

To man, one day is 24 hours, but possibly God, being an Omniscient being, it is longer?

Who truly knows?

Not I.

I am alive and trust in my ability to survive.

Whether there is a hereafter is yet to be seen.

So, until I see that, I will live how I see fit to best live a fruitful life.

reply to [post by TheMythLives](#)

Interesting thread.... Congratulations... A star for your efforts.

The first part of your OP...

The Big Bang Model is a broadly accepted theory for the origin and evolution of our universe. It postulates that 12 to 14 billion years ago, the portion of the universe we can see today was only a few millimeters across. It has since expanded from this hot dense state into the vast and much cooler cosmos we currently inhabit. We can see remnants of this hot dense matter as the now very cold cosmic microwave background [radiation](#) which still pervades the universe and is visible to microwave detectors as a uniform glow across the entire sky.

What are your thoughts on [where is the universe](#) or where did the "big Bang" take place.

Do you have any suggestions as to where the Universe actually exists.

I know many will say, "here" but where is "here" actually, in the All of things.

Does anyone actually know where we are or where this universe is ???

Something just cannot exist out of nothing right?

Of course it can, it's just very hard for us to imagine how something can simply be...no beginning or end, nothing created it, goes against the pattern that we see all around us of beginning and end, our brain loves patterns. Oh and great thread, still watching videos...from what i have read though it seems to have a slight new agey vibe. Anyway i will get back after watching and reading.

reply to [post by Dotted](#)

But "Nothing" is "Something" or there wouldn't be such a word in Language.

Not as easy a subject as first thought by many in fact a brain teaser...

The "Nothing" is just one "Component" of the **Paradox**.

All things exist in pairs and in this Case the **Paradox** is "Something/Nothing".

The Component called "Nothing" is perhaps the strangest and least understood of all.

Nothing is Something..... which is Nothing.. If you can see what I am getting at ???

So if Nothing existed in the beginning then Something did exist which is Nothing.

If Nothing existed or does exist today it had to be or is somewhere, so if Nothing is Somewhere it must be "Something". 🤖

Often we say for example there is "Nothing" in there.
(where is the "Nothing" in this case ??? IN there!)

Or there is "Nothing" there.
(where is the "Nothing" in this case ??? there!)

Or there is "Nothing" Out there.
(where is the "Nothing" in this case ??? Out there!)

So this is why I say The Subject involving "Nothing" is the Strangest of all and the least understood subject of all to the human species.

Something just cannot exist out of nothing right?

In my theory, the start of everything is not pondered upon. Because I have no idea. However, the beginning of the multi-verse is because the dimension collapses and when it tried to reorganize itself correctly it basically goofed up. Alternate realities are errors and the rest is explained in the thread. About

how the alternate realities are trying to re-organize themselves into the completed puzzle.

Where did God come from? That is a loaded question, because what is God? Is he energy? Possibly so. But he would reside in the parent dimensions where order destroys chaos every time.

Can something exist out of nothing? No, we are all recycled material from the previous "completed" universe. And we are continuously working toward the reunification of our true selves and the true universe.

What are your thoughts on where is the universe or where did the "big Bang" take place.

Do you have any suggestions as to where the Universe actually exists.

I know many will say, "here" but where is "here" actually, in the All of things.

Does anyone actually know where we are or where this universe is ???

Well the first part explained that the big bang was the result of the dimension re-stabilizing itself and creating a copy of the previous 'universe'. Where did it take place? No clue. Somewhere in the universe.

The true universe does not actually 'exist' yet, because it is in fragments, hence the alternate realities. Once those are recombined with each other, the true universe will be together once again.

Again the universe does not exist, yet. Therefore, no one knows where it is at. We all occupy the same space as the alternative realities. We are all

bleeding through and will eventually be reformed.

What source told you that our dimension collapsed? Also are you saying that we are moving towards the collapse or that we will leave this dimension so that it can repair/start it's process over again? What causes a dimension to collapse? did ancient us do it?

No source, that is all my theory of everything. We are moving toward a reboot phase where all the alternate realities come together with each other and form the "true" reality. The true universe that was destroyed and fractured long ago. So in essence, no we will not collapse again, but be reformed. What causes a dimension to collapse? I have no idea, maybe an error or perhaps it was even us experimenting with things that we should not have. It is possible that we created a black hole in the previous complete universe that we ruined ourselves.

Oh and great thread, still watching videos...from what i have read though it seems to have a slight new agey vibe. Anyway i will get back after watching and reading.

Awesome look forward to your thoughts!

Thank you for sharing your thoughts...

Again the universe does not exist, yet. Therefore, no one knows where it is at. We all occupy the same space as the alternative realities. We are all bleeding through and will eventually be reformed.

Interesting thought....

I can sleep at night by accepting the idea the universe is endless and filled

with all kinds of stuff that collides and misses for all of eternity. The big bang would just be two 'really big' masses colliding and causing all kinds of reactions, in an unfathomable ocean of masses. No error, not planned, just the way things happen.
