FACEBOOK FACT CHECKER WORKED AT WUHAN BIOLAB, RULED OUT VIRUS-LEAK WHILE 'DEBUNKING' ARTICLES

'I have worked in this exact laboratory at various times for the past 2 years'

ZeroHedge - APRIL 16, 2020  64 Comments

**A Facebook fact checker who has 'debunked' articles suggesting that COVID-19 may have leaked from the Wuhan Institute of Virology (WIV) has a giant conflict of interest; she worked at the institute – which is now suspected of accidentally leaking the hyper-virulent virus which has killed over 130,000 people and cast the global economy into chaos.**

Danielle Anderson, who works at Duke University's NUS Medical School lab in Singapore, also contributes to [Science Feedback](#) – which Facebook has been using to slap "False Information" labels on articles claiming that COVID-19 may have originated at the Wuhan institute – **where Anderson worked with bat coronavirus.**

A quick search of [Anderson's publications](#) reveals no fewer than **nine collaborations with Dr. Peng Zhou** – a Wuhan scientist experimenting on bat

personally attest to the strict control and containment measures implemented while working there,” Anderson writes in **BREAKING STORE** one such ‘debunking’ of a *New York Post* article that claims “China [is having] a problem keeping dangerous pathogens in test tubes where they belong” while **Science Feedback cast doubt on the *Post*’s claim that “evidence points to SARS-CoV-2 research being carried out at the Wuhan Institute of Virology.”**

**Except, they were carrying out SARS-CoV-2 research** at that exact lab, according to new reports in the *Wall Street Journal*, the *Daily Mail* and *Fox News*.

An April 9 report in the *Journal* reveals that COVID-19 is genetically identical to a coronavirus found in a horseshoe bat “**collected by hazmat-clad scientists from the Institute of Virology in Wuhan.**”

While a Wednesday report from *Fox News* reveals that **COVID-19 leaked from the Wuhan Institute of Virology, and that “patient zero” was an employee who became infected** before spreading it throughout the community, according to ‘multiple sources who have been briefed on the details.’

And while Anderson was busy covering for her corona-labmates with Facebook debunkings implicating the WIV, **she went on national television to explain that the virus could have only come from outside the lab.**

Studies point to bats as likely hosts of novel coron...

Anderson further peddled the now-debunked wet-market theory in a paper she co-wrote in *The Lancet*, which reads: **“While recognising the tremendous effort by the China CDC team** in the early response to the 2019-nCoV outbreak, the small number of team members trained in animal health was probably one of the reasons for the delay **in identifying an intermediate animal(s), which is likely to have caused the spread of the virus in a region of the market where wildlife animals were traded and subsequently found to be heavily contaminated.** Unfortunately, what animal(s) was involved in transmission remains unknown.”

Any suggestion to the contrary **is now deemed ‘False Information’ by Facebook**, thanks to the highly conflicted Danielle Anderson and crew over at Science Feedback.
