Ivermectin – A new way of defeating Covid-19

January 30, 2021 by Robert

On day four I was cured, had my energy back and was able to work from Daylight to Dark.

Ivermectin – A new way of defeating Covid-19

David Christian

I came down with Covid-19 over the Christmas weekend and was sick for almost 2 weeks and couldn't get over it.

A friend of my wife at work told her about a new way of defeating Covid-19.

This friend, like us, owns a farm and raises cattle. As it happens, her husband back in mid December tested positive for Covid-19 and was placed on antibiotics by his doctor. Like me, he couldn't get over it.

While outside treating his cattle with the veterinarian, he explained he had tested positive 2 weeks earlier and was still trying to recover from the Covid-19.

The Vet laughed and said, "I've got something which will knock that Covid bug right out. You will think I am joking but it works."

The Vet told him to use Ivermectin Injection for Cattle and Swine 1% Solution. To use 2-3mL by mixing it in some Juice or Gatorade. Then repeat 3 days later and he would be cured.

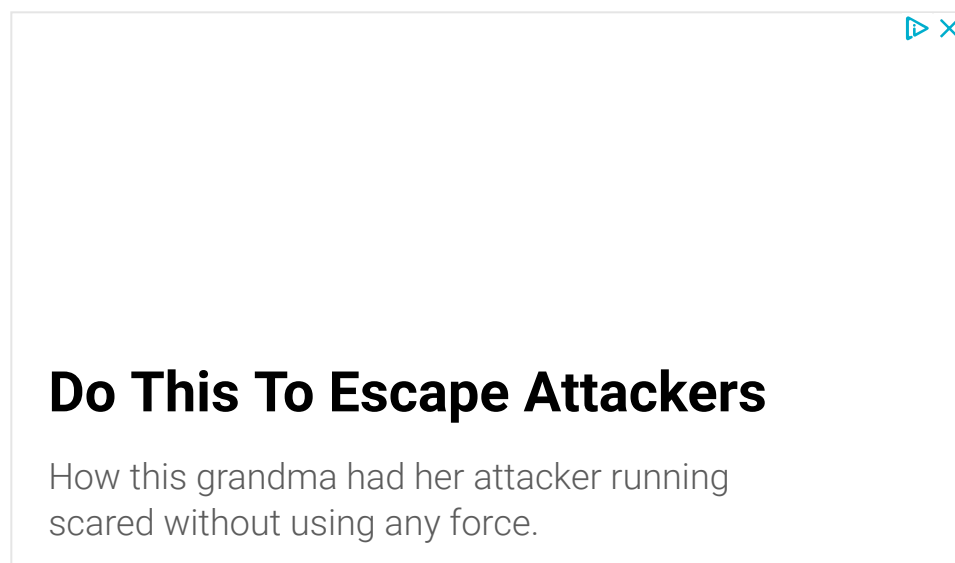

When My wife came home from work and told me this story, I went to our local feed store and bought some Durvet Ivermectin 1% Solution. Cost \$34.95. I took the recommended rate and mixed it with Gatorade.

The next morning I woke up coughing my head off for about 20 minutes. Each time I coughed up green and yellow mucus, and I felt better later that day.

On day three I took my second dose.

On day four I was cured, had my energy back and was able to work from Daylight to Dark. I personally know numerous farmers in the area who have taken this treatment along with Vitamin C and it cured them in 4-5 days by taking it at the first signs of sickness.

The best thing is now we know another way to treat colds and Flu in the event the SHTF happens.

Do This To Escape Attackers

How this grandma had her attacker running scared without using any force.
