

PAGAN & CHRISTIAN CREEDS: THEIR ORIGIN AND MEANING

By EDWARD CARPENTER

1919

“The different religions being lame attempts to represent under various guises this one root-fact of the central universal life, men have at all times clung to the religious creeds and rituals and ceremonials as symbolising in some rude way the redemption and fulfilment of their own most intimate natures—and this whether consciously understanding the interpretations, or whether (as most often) only doing so in an unconscious or quite subconscious way.”

--The Drama of Love and Death, p. 96.

PAGAN AND CHRISTIAN CREEDS: THEIR ORIGIN AND MEANING

I. INTRODUCTORY

The subject of Religious Origins is a fascinating one, as the great multitude of books upon it, published in late years, tends to show. Indeed the great difficulty to-day in dealing with the subject, lies in the very mass of the material to hand—and that not only on account of the labor involved in sorting the material, but because the abundance itself of facts opens up temptation to a student in this department of Anthropology (as happens also in other branches of general Science) to rush in too hastily with what seems a plausible theory. The more facts, statistics, and so forth, there are available in any investigation, the easier it is to pick out a considerable number which will fit a given theory. The other facts being neglected or ignored, the views put forward enjoy for a time a great vogue. Then inevitably, and at a later time, new or neglected facts alter the outlook, and a new perspective is established.

There is also in these matters of Science (though many scientific men would doubtless deny this) a great deal of "Fashion". Such has been notoriously the case in Political Economy, Medicine, Geology, and even in such definite studies as Physics and Chemistry. In a comparatively recent science, like that with which we are now concerned, one would naturally expect variations. A hundred and fifty years ago, and since the time of Rousseau, the "Noble Savage" was extremely popular; and he lingers still in the story books of our children. Then the reaction from this extreme view set in, and of late years it has been the popular cue (largely, it must be said, among "armchair" travelers and explorers) to represent the religious rites and customs of primitive folk as a senseless mass of superstitions, and the early man as quite devoid of decent feeling and intelligence. Again, when the study of religious origins first began in modern times to be seriously taken up—say in the earlier part of last century—there was a great boom in Sun gods. Every divinity in the Pantheon was an impersonation of the Sun—unless indeed (if feminine) of the Moon. Apollo was a sun god, of course; Hercules was a sun god; Samson was a sungod; Indra and Krishna, and even Christ, the same. C. F. Dupuis in France (*Origine de tous les Cultes*, 1795), F. Nork in Germany (*Biblische Mythologie*, 1842), Richard Taylor in England (*The Devil's Pulpit*, 1830), were among the first in modern times to put forward this view. A little later the PHAL-LIC explanation of everything came into fashion. The deities were all polite names for the organs and powers of procreation. R. P. Knight (*Ancient Art and Mythology*, 1818) and Dr. Thomas Inman (*Ancient Faiths and Ancient Names*, 1868) popularized this idea in England; so did Nork in Germany. Then again there was a period of what is sometimes called Euhemerism—the theory that the gods and goddesses had actually once been men and women, historical characters round whom a halo of romance and remoteness had gathered. Later still, a school has arisen which thinks little of sun gods, and pays more attention to Earth and Nature spirits, to gnomes and demons and vegetation-sprites, and to the processes of Magic by which these (so it was supposed) could be enlisted in man's service if friendly, or exorcised if hostile.

It is easy to see of course that there is some truth in ALL these explanations; but naturally each school for the time being makes the most of its own contention. Mr. J. M. Robertson (*Pagan Christs and Christianity and Mythology*), who has done such fine work in this field, relies chiefly on the solar and astronomical origins, though he does not altogether deny the others; Dr. Frazer, on the other hand—whose great work, *The Golden Bough*, is a monumental collection of primitive customs, and will be an inexhaustible quarry for all future students—is apparently very little concerned with theories about the Sun and the stars, but concentrates his attention on the collection of innumerable details of rites, chiefly magical, connected with food and vegetation. Still later writers, like S. Reinach, Jane Harrison and E. A. Crowley, being mainly occupied with customs of very primitive peoples, like the Pelasgian Greeks or the Australian aborigines, have confined themselves (necessarily) even more to Magic and Witchcraft.

Meanwhile the Christian Church from these speculations has kept itself severely apart—as of course representing a unique and divine revelation little concerned or interested in such heathenisms; and moreover (in this country at any rate) has managed to persuade the general public of its own divine uniqueness to such a degree that few people, even nowadays, realize that it has sprung from just the same root as Paganism, and that it shares by far the most part of its doctrines and rites with the latter. Till quite lately it was thought (in Britain) that only secularists and unfashionable people took any interest in sun gods; and while it was true that learned professors might point to a belief in Magic as one of the first sources of Religion, it was easy in reply to say that this obviously had nothing to do with Christianity! The Secularists, too, rather spoil their case by assuming, in their wrath against the Church, that all priests since the beginning of the world have been frauds and charlatans, and that all the rites of religion were merely devil's devices invented by them for the purpose of preying upon the superstitions of the ignorant, to their own enrichment. They (the Secularists) overleaped themselves by grossly exaggerating a thing that no doubt is partially true.

Thus the subject of religious origins is somewhat complex, and yields many aspects for consideration. It is only, I think, by keeping a broad course and admitting contributions to the truth from various sides, that valuable results can be obtained. It is absurd to suppose that in this or any other science neat systems can be found which will cover all the facts. Nature and History do not deal in such things, or supply them for a sop to Man's vanity.

It is clear that there have been three main lines, so far, along which human speculation and study have run. One connecting religious rites and observations with the movements of the Sun and the planets in the sky, and leading to the invention of and belief in Olympian and remote gods dwelling in heaven and ruling the Earth from a distance; the second connecting religion with the changes of the season, on the Earth and with such practical things as the growth of vegetation and food, and leading to or mingled with a vague belief in earth-spirits and magical methods of influencing such spirits; and the third connecting religion with man's own body and the tremendous force of sex residing in it—emblem of undying life and all fertility and power. It is clear also—and all

investigation confirms it—that the second-mentioned phase of religion arose on the whole BEFORE the first-mentioned—that is, that men naturally thought about the very practical questions of food and vegetation, and the magical or other methods of encouraging the same, before they worried themselves about the heavenly bodies and the laws of THEIR movements, or about the sinister or favorable influences the stars might exert. And again it is extremely probable that the third-mentioned aspect—that which connected religion with the procreative desires and phenomena of human physiology—really came FIRST. These desires and physiological phenomena must have loomed large on the primitive mind long before the changes of the seasons or of the sky had been at all definitely observed or considered. Thus we find it probable that, in order to understand the sequence of the actual and historical phases of religious worship, we must approximately reverse the order above-given in which they have been STUDIED, and conclude that in general the Phallic cults came first, the cult of Magic and the propitiation of earth-divinities and spirits came second, and only last came the belief in definite God-figures residing in heaven.

At the base of the whole process by which divinities and demons were created, and rites for their propitiation and placation established, lay Fear—fear stimulating the imagination to fantastic activity. *Primus in orbe deos fecit Timor*. And fear, as we shall see, only became a mental stimulus at the time of, or after, the evolution of self-consciousness. Before that time, in the period of SIMPLE consciousness, when the human mind resembled that of the animals, fear indeed existed, but its nature was more that of a mechanical protective instinct. There being no figure or image of SELF in the animal mind, there were correspondingly no figures or images of beings who might threaten or destroy that self. So it was that the imaginative power of fear began with Self-consciousness, and from that imaginative power was unrolled the whole panorama of the gods and rites and creeds of Religion down the centuries.

The immense force and domination of Fear in the first self-conscious stages of the human mind is a thing which can hardly be exaggerated, and which is even difficult for some of us moderns to realize. But naturally as soon as Man began to think about himself—a frail phantom and waif in the midst of tremendous forces of whose nature and mode of operation he was entirely ignorant—he was BESET with terrors; dangers loomed upon him on all sides. Even to-day it is noticed by doctors that one of the chief obstacles to the cure of illness among some black or native races is sheer superstitious terror; and Thanatomania is the recognized word for a state of mind (“obsession of death”) which will often cause a savage to perish from a mere scratch hardly to be called a wound. The natural defence against this state of mind was the creation of an enormous number of taboos—such as we find among all races and on every conceivable subject—and these taboos constituted practically a great body of warnings which regulated the lives and thoughts of the community, and ultimately, after they had been weeded out and to some degree simplified, hardened down into very stringent Customs and Laws. Such taboos naturally in the beginning tended to include the avoidance not only of acts which might reasonably be considered dangerous, like touching a corpse, but also things much more remote and fanciful in their relation to

danger, like merely looking at a mother-in-law, or passing a lightning-struck tree; and (what is especially to be noticed) they tended to include acts which offered any special PLEASURE or temptation—like sex or marriage or the enjoyment of a meal. Taboos surrounded these things too, and the psychological connection is easy to divine: but I shall deal with this general subject later.

It may be guessed that so complex a system of regulations made life anything but easy to early peoples; but, preposterous and unreasonable as some of the taboos were, they undoubtedly had the effect of compelling the growth of self-control. Fear does not seem a very worthy motive, but in the beginning it curbed the violence of the purely animal passions, and introduced order and restraint among them. Simultaneously it became itself, through the gradual increase of knowledge and observation, transmuted and etherealized into something more like wonder and awe and (when the gods rose above the horizon) into reverence. Anyhow we seem to perceive that from the early beginnings (in the Stone Age) of self-consciousness in Man there has been a gradual development—from crass superstition, senseless and accidental, to rudimentary observation, and so to belief in Magic; thence to Animism and personification of nature-powers in more or less human form, as earth-divinities or sky-gods or embodiments of the tribe; and to placation of these powers by rites like Sacrifice and the Eucharist, which in their turn became the foundation of Morality. Graphic representations made for the encouragement of fertility—as on the walls of Bushmen's rock-dwellings or the ceilings of the caverns of Altamira— became the nurse of pictorial Art; observations of plants or of the weather or the stars, carried on by tribal medicine-men for purposes of witchcraft or prophecy, supplied some of the material of Science; and humanity emerged by faltering and hesitating steps on the borderland of those finer perceptions and reasonings which are supposed to be characteristic of Civilization.

The process of the evolution of religious rites and ceremonies has in its main outlines been the same all over the world, as the reader will presently see—and this whether in connection with the numerous creeds of Paganism or the supposedly unique case of Christianity; and now the continuity and close intermixture of these great streams can no longer be denied—nor IS it indeed denied by those who have really studied the subject. It is seen that religious evolution through the ages has been practically One thing—that there has been in fact a World-religion, though with various phases and branches.

And so in the present day a new problem arises, namely how to account for the appearance of this great Phenomenon, with its orderly phases of evolution, and its own spontaneous growths in all corners of the globe—this phenomenon which has had such a strange sway over the hearts of men, which has attracted them with so weird a charm, which has drawn out their devotion, love and tenderness, which has consoled them in sorrow and affliction, and yet which has stained their history with such horrible sacrifices and persecutions and cruelties. What has been the instigating cause of it?

The answer which I propose to this question, and which is developed to some extent in the following chapters, is a psychological one. It is that the phenomenon proceeds from, and is a necessary accompaniment of, the growth of human Consciousness itself—its growth, namely, through the three great stages of its unfoldment. These stages are (1) that of the simple or animal consciousness, (2) that of SELF-consciousness, and (3) that of a third stage of consciousness which has not as yet been effectively named, but whose indications and precursive signs we here and there perceive in the rites and prophecies and mysteries of the early religions, and in the poetry and art and literature generally of the later civilizations. Though I do not expect or wish to catch Nature and History in the careful net of a phrase, yet I think that in the sequence from the above-mentioned first stage to the second, and then again in the sequence from the second to the third, there will be found a helpful explanation of the rites and aspirations of human religion. It is this idea, illustrated by details of ceremonial and so forth, which forms the main thesis of the present book. In this sequence of growth, Christianity enters as an episode, but no more than an episode. It does not amount to a disruption or dislocation of evolution. If it did, or if it stood as an unique or unclassifiable phenomenon (as some of its votaries contend), this would seem to be a misfortune—as it would obviously rob us of at any rate one promise of progress in the future. And the promise of something better than Paganism and better than Christianity is very precious. It is surely time that it should be fulfilled.

The tracing, therefore, of the part that human self-consciousness has played, psychologically, in the evolution of religion, runs like a thread through the following chapters, and seeks illustration in a variety of details. The idea has been repeated under different aspects; sometimes, possibly, it has been repeated too often; but different aspects in such a case do help, as in a stereoscope, to give solidity to the thing seen. Though the worship of Sun-gods and divine figures in the sky came comparatively late in religious evolution, I have put this subject early in the book (chapters ii and iii), partly because (as I have already explained) it was the phase first studied in modern times, and therefore is the one most familiar to present-day readers, and partly because its astronomical data give great definiteness and “proveability” to it, in rebuttal to the common accusation that the whole study of religious origins is too vague and uncertain to have much value. Going backwards in Time, the two next chapters (iv and v) deal with Totem-sacraments and Magic, perhaps the earliest forms of religion. And these four lead on (in chapters vi to xi) to the consideration of rites and creeds common to Paganism and Christianity. XII and xiii deal especially with the evolution of Christianity itself; xiv and xv explain the inner Meaning of the whole process from the beginning; and xvi and xvii look to the Future.

The appendix on the doctrines of the Upanishads may, I hope, serve to give an idea, intimate even though inadequate, of the third Stage—that which follows on the stage of self-consciousness; and to portray the mental attitudes which are characteristic of that stage. Here in this third stage, it would seem, one comes upon the real FACTS of the inner life—in contradistinction to the fancies and figments of the second stage; and so one reaches the final point of conjunction between Science and Religion.

II. SOLAR MYTHS AND CHRISTIAN FESTIVALS

To the ordinary public—notwithstanding the immense amount of work which has of late been done on this subject—the connection between Paganism and Christianity still seems rather remote. Indeed the common notion is that Christianity was really a miraculous interposition into and dislocation of the old order of the world; and that the pagan gods (as in Milton's Hymn on the Nativity) fled away in dismay before the sign of the Cross, and at the sound of the name of Jesus. Doubtless this was a view much encouraged by the early Church itself—if only to enhance its own authority and importance; yet, as is well known to every student, it is quite misleading and contrary to fact. The main Christian doctrines and festivals, besides a great mass of affiliated legend and ceremonial, are really quite directly derived from, and related to, preceding Nature worships; and it has only been by a good deal of deliberate mystification and falsification that this derivation has been kept out of sight.

In these Nature-worships there may be discerned three fairly independent streams of religious or quasi-religious enthusiasm: (1) that connected with the phenomena of the heavens, the movements of the Sun, planets and stars, and the awe and wonderment they excited; (2) that connected with the seasons and the very important matter of the growth of vegetation and food on the Earth; and (3) that connected with the mysteries of Sex and reproduction. It is obvious that these three streams would mingle and interfuse with each other a good deal; but as far as they were separable the first would tend to create Solar heroes and Sun-myths; the second Vegetation-gods and personifications of Nature and the earth-life; while the third would throw its glamour over the other two and contribute to the projection of deities or demons worshipped with all sorts of sexual and phallic rites. All three systems of course have their special rites and times and ceremonies; but, as, I say, the rites and ceremonies of one system would rarely be found pure and unmixed with those belonging to the two others. The whole subject is a very large one; but for reasons given in the Introduction I shall in this and the following chapter—while not ignoring phases (2) and (3)—lay most stress on phase (1) of the question before us.

At the time of the life or recorded appearance of Jesus of Nazareth, and for some centuries before, the Mediterranean and neighboring world had been the scene of a vast number of pagan creeds and rituals. There were Temples without end dedicated to gods like Apollo or Dionysus among the Greeks, Hercules among the Romans, Mithra among the Persians, Adonis and Attis in Syria and Phrygia, Osiris and Isis and Horus in Egypt, Baal and Astarte among the Babylonians and Carthaginians, and so forth. Societies, large or small, united believers and the devout in the service or ceremonials connected with their respective deities, and in the creeds which they confessed concerning these deities. And an extraordinarily interesting fact, for us, is that notwithstanding great geographical distances and racial differences between the adherents of these various cults, as well as differences in the details of their services, the general outlines of their creeds and ceremonials were—if not identical—so markedly similar as we find them.

I cannot of course go at length into these different cults, but I may say roughly that of all or nearly all the deities above-mentioned it was said and believed that:

- (1) They were born on or very near our Christmas Day.
- (2) They were born of a Virgin-Mother.
- (3) And in a Cave or Underground Chamber.
- (4) They led a life of toil for Mankind.
- (5) And were called by the names of Light-bringer, Healer, Mediator, Savior, Deliverer.
- (6) They were however vanquished by the Powers of Darkness.
- (7) And descended into Hell or the Underworld.
- (8) They rose again from the dead, and became the pioneers of mankind to the Heavenly world.
- (9) They founded Communions of Saints, and Churches into which disciples were received by Baptism.
- (10) And they were commemorated by Eucharistic meals.

Let me give a few brief examples.

Mithra was born in a cave, and on the 25th December. He was born of a Virgin. He traveled far and wide as a teacher and illuminator of men. He slew the Bull (symbol of the gross Earth which the sunlight fructifies). His great festivals were the winter solstice and the Spring equinox (Christmas and Easter). He had twelve companions or disciples (the twelve months). He was buried in a tomb, from which however he rose again; and his resurrection was celebrated yearly with great rejoicings. He was called Savior and Mediator, and sometimes figured as a Lamb; and sacramental feasts in remembrance of him were held by his followers. This legend is apparently partly astronomical and partly vegetational; and the same may be said of the following about Osiris.

Osiris was born (Plutarch tells us) on the 361st day of the year, say the 27th December. He too, like Mithra and Dionysus, was a great traveler. As King of Egypt he taught men civil arts, and "tamed them by music and gentleness, not by force of arms"; he was the discoverer of corn and wine. But he was betrayed by Typhon, the power of darkness, and slain and dismembered. "This happened," says Plutarch, "on the 17th of the month Athyr, when the sun enters into the Scorpion" (the sign of the Zodiac which indicates the oncoming of Winter). His body was placed in a box, but afterwards, on

the 19th, came again to life, and, as in the cults of Mithra, Dionysus, Adonis and others, so in the cult of Osiris, an image placed in a coffin was brought out before the worshipers and saluted with glad cries of "Osiris is risen." "His sufferings, his death and his resurrection were enacted year by year in a great mystery-play at Abydos."

The two following legends have more distinctly the character of Vegetation myths.

Adonis or Tammuz, the Syrian god of vegetation, was a very beautiful youth, born of a Virgin (Nature), and so beautiful that Venus and Proserpine (the goddesses of the Upper and Underworlds) both fell in love with him. To reconcile their claims it was agreed that he should spend half the year (summer) in the upper world, and the winter half with Proserpine below. He was killed by a boar (Typhon) in the autumn. And every year the maidens "wept for Adonis" (see Ezekiel viii. 14). In the spring a festival of his resurrection was held—the women set out to seek him, and having found the supposed corpse placed it (a wooden image) in a coffin or hollow tree, and performed wild rites and lamentations, followed by even wilder rejoicings over his supposed resurrection. At Aphaca in the North of Syria, and halfway between Byblus and Baalbec, there was a famous grove and temple of Astarte, near which was a wild romantic gorge full of trees, the birthplace of a certain river Adonis—the water rushing from a Cavern, under lofty cliffs. Here (it was said) every year the youth Adonis was again wounded to death, and the river ran red with his blood, while the scarlet anemone bloomed among the cedars and walnuts.

The story of Attis is very similar. He was a fair young shepherd or herdsman of Phrygia, beloved by Cybele (or Demeter), the Mother of the gods. He was born of a Virgin—Nana—who conceived by putting a ripe almond or pomegranate in her bosom. He died, either killed by a boar, the symbol of winter, like Adonis, or self-castrated (like his own priests); and he bled to death at the foot of a pine tree (the pine and pine-cone being symbols of fertility). The sacrifice of his blood renewed the fertility of the earth, and in the ritual celebration of his death and resurrection his image was fastened to the trunk of a pine-tree (compare the Crucifixion). But I shall return to this legend presently. The worship of Attis became very widespread and much honored, and was ultimately incorporated with the established religion at Rome somewhere about the commencement of our Era.

The following two legends (dealing with Hercules and with Krishna) have rather more of the character of the solar, and less of the vegetational myth about them. Both heroes were regarded as great benefactors of humanity; but the former more on the material plane, and the latter on the spiritual.

Hercules or Heracles was, like other Sun-gods and benefactors of mankind, a great Traveler. He was known in many lands, and everywhere he was invoked as Saviour. He was miraculously conceived from a divine Father; even in the cradle he strangled two serpents sent to destroy him. His many labors for the good of the world were ultimately epitomized into twelve, symbolized by the signs of the Zodiac. He slew the

Nemxan Lion and the Hydra (offspring of Typhon) and the Boar. He overcame the Cretan Bull, and cleaned out the Stables of Augeas; he conquered Death and, descending into Hades, brought Cerberus thence and ascended into Heaven. On all sides he was followed by the gratitude and the prayers of mortals.

As to Krishna, the Indian god, the points of agreement with the general divine career indicated above are too salient to be overlooked, and too numerous to be fully recorded. He also was born of a Virgin (Devaki) and in a Cave, and his birth announced by a Star. It was sought to destroy him, and for that purpose a massacre of infants was ordered. Everywhere he performed miracles, raising the dead, healing lepers, and the deaf and the blind, and championing the poor and oppressed. He had a beloved disciple, Arjuna, (cf. John) before whom he was transfigured. His death is differently related—as being shot by an arrow, or crucified on a tree. He descended into hell; and rose again from the dead, ascending into heaven in the sight of many people. He will return at the last day to be the judge of the quick and the dead.

Such are some of the legends concerning the pagan and pre-Christian deities—only briefly sketched now, in order that we may get something like a true perspective of the whole subject; but to most of them, and more in detail, I shall return as the argument proceeds.

What we chiefly notice so far are two points; on the one hand the general similarity of these stories with that of Jesus Christ; on the other their analogy with the yearly phenomena of Nature as illustrated by the course of the Sun in heaven and the changes of Vegetation on the earth.

(1) The similarity of these ancient pagan legends and beliefs with Christian traditions was indeed so great that it excited the attention and the undisguised wrath of the early Christian fathers. They felt no doubt about the similarity, but not knowing how to explain it fell back upon the innocent theory that the Devil—in order to confound the Christians—had, CENTURIES BEFORE, caused the pagans to adopt certain beliefs and practices! (Very crafty, we may say, of the Devil, but also very innocent of the Fathers to believe it!) Justin Martyr for instance describes the institution of the Lord's Supper as narrated in the Gospels, and then goes on to say: "Which the wicked devils have IMITATED in the mysteries of Mithra, commanding the same thing to be done. For, that bread and a cup of water are placed with certain incantations in the mystic rites of one who is being initiated you either know or can learn." Tertullian also says that "the devil by the mysteries of his idols imitates even the main part of the divine mysteries." . . . "He baptizes his worshippers in water and makes them believe that this purifies them from their crimes." . . . "Mithra sets his mark on the forehead of his soldiers; he celebrates the oblation of bread; he offers an image of the resurrection, and presents at once the crown and the sword; he limits his chief priest to a single marriage; he even has his virgins and ascetics." Cortez, too, it will be remembered complained that the Devil had positively taught to the Mexicans the same things which God had taught to Christendom.

Justin Martyr again, in the Dialogue with Trypho says that the Birth in the Stable was the prototype of the birth of Mithra in the Cave of Zoroastrianism; and boasts that Christ was born when the Sun takes its birth in the Augean Stable, coming as a second Hercules to cleanse a foul world; and St. Augustine says “we hold this (Christmas) day holy, not like the pagans because of the birth of the Sun, but because of the birth of him who made it.” There are plenty of other instances in the Early Fathers of their indignant ascription of these similarities to the work of devils; but we need not dwell over them. There is no need for US to be indignant. On the contrary we can now see that these animadversions of the Christian writers are the evidence of how and to what extent in the spread of Christianity over the world it had become fused with the Pagan cults previously existing.

It was not till the year A.D. 530 or so—five centuries after the supposed birth of Christ—that a Scythian Monk, Dionysius Exiguus, an abbot and astronomer of Rome, was commissioned to fix the day and the year of that birth. A nice problem, considering the historical science of the period! For year he assigned the date which we now adopt, and for day and month he adopted the 25th December—a date which had been in popular use since about 350 B.C., and the very date, within a day or two, of the supposed birth of the previous Sungods. From that fact alone we may fairly conclude that by the year 530 or earlier the existing Nature-worships had become largely fused into Christianity. In fact the dates of the main pagan religious festivals had by that time become so popular that Christianity was OBLIGED to accommodate itself to them.

This brings us to the second point mentioned a few pages back—the analogy between the Christian festivals and the yearly phenomena of Nature in the Sun and the Vegetation.

Let us take Christmas Day first. Mithra, as we have seen, was reported to have been born on the 25th December (which in the Julian Calendar was reckoned as the day of the Winter Solstice AND of the Nativity of the Sun); Plutarch says (Isis and Osiris, c. 12) that Osiris was born on the 361st day of the year, when a Voice rang out proclaiming the Lord of All. Horus, he says, was born on the 362nd day. Apollo on the same.

Why was all this? Why did the Druids at Yule Tide light roaring fires? Why was the cock supposed to crow all Christmas Eve (“The bird of dawning singeth all night long”)? Why was Apollo born with only one hair (the young Sun with only one feeble ray)? Why did Samson (name derived from Shemesh, the sun) lose all his strength when he lost his hair? Why were so many of these gods—Mithra, Apollo, Krishna, Jesus, and others, born in caves or underground chambers? Why, at the Easter Eve festival of the Holy Sepulchre at Jerusalem is a light brought from the grave and communicated to the candles of thousands who wait outside, and who rush forth rejoicing to carry the new glory over the world? Why indeed? except that older than all history and all written records has been the fear and wonderment of the children of men over the failure of the Sun’s strength in Autumn—the decay of their God; and the anxiety

lest by any means he should not revive or reappear?

Think for a moment of a time far back when there were absolutely NO Almanacs or Calendars, either nicely printed or otherwise, when all that timid mortals could see was that their great source of Light and Warmth was daily failing, daily sinking lower in the sky. As everyone now knows there are about three weeks at the fag end of the year when the days are at their shortest and there is very little change. What was happening? Evidently the god had fallen upon evil times. Typhon, the prince of darkness, had betrayed him; Delilah, the queen of Night, had shorn his hair; the dreadful Boar had wounded him; Hercules was struggling with Death itself; he had fallen under the influence of those malign constellations—the Serpent and the Scorpion. Would the god grow weaker and weaker, and finally succumb, or would he conquer after all? We can imagine the anxiety with which those early men and women watched for the first indication of a lengthening day; and the universal joy when the Priest (the representative of primitive science) having made some simple observations, announced from the Temple steps that the day WAS lengthening—that the Sun was really born again to a new and glorious career.

Let us look at the elementary science of those days a little closer. How without Almanacs or Calendars could the day, or probable day, of the Sun's rebirth be fixed? Go out next Christmas Evening, and at midnight you will see the brightest of the fixed stars, Sirius, blazing in the southern sky—not however due south from you, but somewhat to the left of the Meridian line. Some three thousand years ago (owing to the Precession of the Equinoxes) that star at the winter solstice did not stand at midnight where you now see it, but almost exactly ON the meridian line. The coming of Sirius therefore to the meridian at midnight became the sign and assurance of the Sun having reached the very lowest point of his course, and therefore of having arrived at the moment of his re-birth. Where then was the Sun at that moment? Obviously in the underworld beneath our feet. Whatever views the ancients may have had about the shape of the earth, it was evident to the mass of people that the Sungod, after illuminating the world during the day, plunged down in the West, and remained there during the hours of darkness in some cavern under the earth. Here he rested and after bathing in the great ocean renewed his garments before reappearing in the East next morning.

But in this long night of his greatest winter weakness, when all the world was hoping and praying for the renewal of his strength, it is evident that the new birth would come—if it came at all—at midnight. This then was the sacred hour when in the underworld (the Stable or the Cave or whatever it might be called) the child was born who was destined to be the Savior of men. At that moment Sirius stood on the southern meridian (and in more southern lands than ours this would be more nearly overhead); and that star—there is little doubt—is the Star in the East mentioned in the Gospels.

To the right, as the supposed observer looks at Sirius on the midnight of Christmas Eve, stands the magnificent Orion, the mighty hunter. There are three stars in his belt which, as is well known, lie in a straight line pointing to Sirius. They are not so bright as Sirius, but they are sufficiently bright to attract attention. A long tradition gives them the name of the Three Kings. Dupuis says: "Orion a trois belles etoiles vers le milieu, qui sont de seconde grandeur et posees en ligne droite, l'une pres de l'autre, le peuple les appelle les trois rois. On donne aux trois rois Magis les noms de Magalat, Galgalat, Saraim; et Athos, Satos, Paratoras. Les Catholiques les appellent Gaspard, Melchior, et Balthasar." The last-mentioned group of names comes in the Catholic Calendar in connection with the feast of the Epiphany (6th January); and the name "Trois Rois" is commonly to-day given to these stars by the French and Swiss peasants.

Immediately after Midnight then, on the 25th December, the Beloved Son (or Sun-god) is born. If we go back in thought to the period, some three thousand years ago, when at that moment of the heavenly birth Sirius, coming from the East, did actually stand on the Meridian, we shall come into touch with another curious astronomical coincidence. For at the same moment we shall see the Zodiacal constellation of the Virgin in the act of rising, and becoming visible in the East divided through the middle by the line of the horizon.

The constellation Virgo is a Y-shaped group, of which, the star at the foot, is the well-known Spica, a star of the first magnitude. The other principal stars, at the centre, and xxx and xxx at the extremities, are of the second magnitude. The whole resembles more a cup than the human figure; but when we remember the symbolic meaning of the cup, that seems to be an obvious explanation of the name Virgo, which the constellation has borne since the earliest times. [The three stars xxx, xxx and xxx, lie very nearly on the Ecliptic, that is, the Sun's path—a fact to which we shall return presently.]

At the moment then when Sirius, the star from the East, by coming to the Meridian at midnight signalled the Sun's new birth, the Virgin was seen just rising on the Eastern sky—the horizon line passing through her centre. And many people think that this astronomical fact is the explanation of the very widespread legend of the Virgin-birth. I do not think that it is the sole explanation—for indeed in all or nearly all these cases the acceptance of a myth seems to depend not upon a single argument but upon the convergence of a number of meanings and reasons in the same symbol. But certainly the fact mentioned above is curious, and its importance is accentuated by the following considerations.

In the Temple of Denderah in Egypt, and on the inside of the dome, there is or WAS an elaborate circular representation of the Northern hemisphere of the sky and the Zodiac. Here Virgo the constellation is represented, as in our star-maps, by a woman with a spike of corn in her hand (Spica). But on the margin close by there is an annotating and explicatory figure—a figure of Isis with the infant Horus in her arms, and quite resembling in style the Christian Madonna and Child, except that she is sitting and the child is on her knee. This seems to show that—whatever other nations may

have done in associating Virgo with Demeter, Ceres, Diana etc.—the Egyptians made no doubt of the constellation's connection with Isis and Horus. But it is well known as a matter of history that the worship of Isis and Horus descended in the early Christian centuries to Alexandria, where it took the form of the worship of the Virgin Mary and the infant Savior, and so passed into the European ceremonial. We have therefore the Virgin Mary connected by linear succession and descent with that remote Zodiacal cluster in the sky! Also it may be mentioned that on the Arabian and Persian globes of Abenezra and Abuazar a Virgin and Child are figured in connection with the same constellation.

A curious confirmation of the same astronomical connection is afforded by the Roman Catholic Calendar. For if this be consulted it will be found that the festival of the Assumption of the Virgin is placed on the 15th August, while the festival of the Birth of the Virgin is dated the 8th September. I have already pointed out that the stars, xxx, xxx and xxx of Virgo are almost exactly on the Ecliptic, or Sun's path through the sky; and a brief reference to the Zodiacal signs and the star-maps will show that the Sun each year enters the sign of Virgo about the first-mentioned date, and leaves it about the second date. At the present day the Zodiacal signs (owing to precession) have shifted some distance from the constellations of the same name. But at the time when the Zodiac was constituted and these names were given, the first date obviously would signalize the actual disappearance of the cluster Virgo in the Sun's rays—i. e. the Assumption of the Virgin into the glory of the God—while the second date would signalize the reappearance of the constellation or the Birth of the Virgin. The Church of Notre Dame at Paris is supposed to be on the original site of a Temple of Isis; and it is said (but I have not been able to verify this myself) that one of the side entrances—that, namely, on the left in entering from the North (cloister) side—is figured with the signs of the Zodiac EXCEPT that the sign Virgo is replaced by the figure of the Madonna and Child.

So strange is the scripture of the sky! Innumerable legends and customs connect the rebirth of the Sun with a Virgin parturition. Dr. J. G. Frazer in his Part IV of *The Golden Bough* says: "If we may trust the evidence of an obscure scholiast the Greeks [in the worship of Mithras at Rome] used to celebrate the birth of the luminary by a midnight service, coming out of the inner shrines and crying, 'The Virgin has brought forth! The light is waxing!'" In Elie Reclus' little book *Primitive Folk* it is said of the Esquimaux that "On the longest night of the year two angakout (priests), of whom one is disguised as a WOMAN, go from hut to hut extinguishing all the lights, rekindling them from a vestal flame, and crying out, 'From the new sun cometh a new light!'"

All this above-written on the Solar or Astronomical origins of the myths does not of course imply that the Vegetational origins must be denied or ignored. These latter were doubtless the earliest, but there is no reason—as said in the Introduction (ch. i)—why the two elements should not to some extent have run side by side, or been fused with each other. In fact it is quite clear that they must have done so; and to separate them out too rigidly, or treat them as antagonistic, is a mistake. The Cave or Underworld in

which the New Year is born is not only the place of the Sun's winter retirement, but also the hidden chamber beneath the Earth to which the dying Vegetation goes, and from which it re-arises in Spring. The amours of Adonis with Venus and Proserpine, the lovely goddesses of the upper and under worlds, or of Attis with Cybele, the blooming Earth-mother, are obvious vegetation-symbols; but they do not exclude the interpretation that Adonis (Adonai) may also figure as a Sun-god. The Zodiacal constellations of Aries and Taurus (to which I shall return presently) rule in heaven just when the Lamb and the Bull are in evidence on the earth; and the yearly sacrifice of those two animals and of the growing Corn for the good of mankind runs parallel with the drama of the sky, as it affects not only the said constellations but also Virgo (the Earth-mother who bears the sheaf of corn in her hand).

I shall therefore continue (in the next chapter) to point out these astronomical references—which are full of significance and poetry; but with a recommendation at the same time to the reader not to forget the poetry and significance of the terrestrial interpretations.

Between Christmas Day and Easter there are several minor festivals or holy days—such as the 28th December (the Massacre of the Innocents), the 6th January (the Epiphany), the 2nd February (Candlemas Day), the period of Lent (German Lenz, the Spring), the Annunciation of the Blessed Virgin, and so forth—which have been commonly celebrated in the pagan cults before Christianity, and in which elements of Star and Nature worship can be traced; but to dwell on all these would take too long; so let us pass at once to the period of Easter itself.

III. THE SYMBOLISM OF THE ZODIAC

The Vernal Equinox has all over the ancient world, and from the earliest times, been a period of rejoicing and of festivals in honor of the Sungod. It is needless to labor a point which is so well known. Everyone understands and appreciates the joy of finding that the long darkness is giving way, that the Sun is growing in strength, and that the days are winning a victory over the nights. The birds and flowers reappear, and the promise of Spring is in the air. But it may be worth while to give an elementary explanation of the ASTRONOMICAL meaning of this period, because this is not always understood, and yet it is very important in its bearing on the rites and creeds of the early religions. The priests who were, as I have said, the early students and inquirers, had worked out this astronomical side, and in that way were able to fix dates and to frame for the benefit of the populace myths and legends, which were in a certain sense explanations of the order of Nature, and a kind of "popular science."

The Equator, as everyone knows, is an imaginary line or circle girdling the Earth half-way between the North and South poles. If you imagine a transparent Earth with a light at its very centre, and also imagine the SHADOW of this equatorial line to be thrown on the vast concave of the Sky, this shadow would in astronomical parlance coincide with the Equator of the Sky—forming an imaginary circle half-way between the North and South celestial poles.

The Equator, then, may be pictured as cutting across the sky either by day or by night, and always at the same elevation—that is, as seen from any one place. But the Ecliptic (the other important great circle of the heavens) can only be thought of as a line traversing the constellations as they are seen at NIGHT. It is in fact the Sun's path among the fixed stars. For (really owing to the Earth's motion in its orbit) the Sun appears to move round the heavens once a year—travelling, always to the left, from constellation to constellation. The exact path of the sun is called the Ecliptic; and the band of sky on either side of the Ecliptic which may be supposed to include the said constellations is called the Zodiac. How then—it will of course be asked—seeing that the Sun and the Stars can never be seen together—were the Priests ABLE to map out the path of the former among the latter? Into that question we need not go. Sufficient to say that they succeeded; and their success—even with the very primitive instruments they had—shows that their astronomical knowledge and acuteness of reasoning were of no mean order.

To return to our Vernal Equinox. Let us suppose that the Equator and Ecliptic of the sky, at the Spring season, are represented by two lines Eq. and Ecl. crossing each other at the point P. The Sun, represented by the small circle, is moving slowly and in its annual course along the Ecliptic to the left. When it reaches the point P (the dotted circle) it stands on the Equator of the sky, and then for a day or two, being neither North nor South, it shines on the two terrestrial hemispheres alike, and day and night are equal. BEFORE that time, when the sun is low down in the heavens, night has the advantage, and the days are short; AFTERWARDS, when the Sun has travelled more

to the left, the days triumph over the nights. It will be seen then that this point P where the Sun's path crosses the Equator is a very critical point. It is the astronomical location of the triumph of the Sungod and of the arrival of Spring.

How was this location defined? Among what stars was the Sun moving at that critical moment? (For of course it was understood, or supposed, that the Sun was deeply influenced by the constellation through which it was, or appeared to be, moving.) It seems then that at the period when these questions were occupying men's minds—say about three thousand years ago—the point where the Ecliptic crossed the Equator was, as a matter of fact, in the region of the constellation Aries or the he- Lamb. The triumph of the Sungod was therefore, and quite naturally, ascribed to the influence of Aries. THE LAMB BECAME THE SYMBOL OF THE RISEN SAVIOR, AND OF HIS PASSAGE FROM THE UNDERWORLD INTO THE HEIGHT OF HEAVEN. At first such an explanation sounds hazardous; but a thousand texts and references confirm it; and it is only by the accumulation of evidence in these cases that the student becomes convinced of a theory's correctness. It must also be remembered (what I have mentioned before) that these myths and legends were commonly adopted not only for one strict reason but because they represented in a general way the convergence of various symbols and inferences.

Let me enumerate a few points with regard to the Vernal Equinox. In the Bible the festival is called the Passover, and its supposed institution by Moses is related in Exodus, ch. xii. In every house a he-lamb was to be slain, and its blood to be sprinkled on the doorposts of the house. Then the Lord would pass over and not smite that house. The Hebrew word is pasach, to pass. The lamb slain was called the Paschal Lamb. But what was that lamb? Evidently not an earthly lamb—(though certainly the earthly lambs on the hillsides WERE just then ready to be killed and eaten)—but the heavenly Lamb, which was slain or sacrificed when the Lord “passed over” the equator and obliterated the constellation Aries. This was the Lamb of God which was slain each year, and “Slain since the foundation of the world.” This period of the Passover (about the 25th March) was to be the beginning of a new year. The sacrifice of the Lamb, and its blood, were to be the promise of redemption. The door-frames of the houses—symbols of the entrance into a new life—were to be sprinkled with blood. Later, the imagery of the saving power of the blood of the Lamb became more popular, more highly colored. (See St. Paul's epistles, and the early Fathers.) And we have the expression “washed in the blood of the Lamb” adopted into the Christian Church.

In order fully to understand this extraordinary expression and its origin we must turn for a moment to the worship both of Mithra, the Persian Sungod, and of Attis the Syrian god, as throwing great light on the Christian cult and ceremonies. It must be remembered that in the early centuries of our era the Mithra-cult was spread over the whole Western world. It has left many monuments of itself here in Britain. At Rome the worship was extremely popular, and it may almost be said to have been a matter of chance whether Mithraism should overwhelm Christianity, or whether the younger religion by adopting many of the rites of the older one should establish itself (as it did) in

the face of the latter.

Now we have already mentioned that in the Mithra cult the slaying of a Bull by the Sungod occupies the same sort of place as the slaying of the Lamb in the Christian cult. It took place at the Vernal Equinox and the blood of the Bull acquired in men's minds a magic virtue. Mithraism was a greatly older religion than Christianity; but its genesis was similar. In fact, owing to the Precession of the Equinoxes, the crossing-place of the Ecliptic and Equator was different at the time of the establishment of Mithra-worship from what it was in the Christian period; and the Sun instead of standing in the He-lamb, or Aries, at the Vernal Equinox stood, about two thousand years earlier (as indicated by the dotted line in the diagram), in this very constellation of the Bull. The bull therefore became the symbol of the triumphant God, and the sacrifice of the bull a holy mystery. (Nor must we overlook here the agricultural appropriateness of the bull as the emblem of Spring-plowings and of service to man.)

The sacrifice of the Bull became the image of redemption. In a certain well-known Mithra-sculpture or group, the Sungod is represented as plunging his dagger into a bull, while a scorpion, a serpent, and other animals are sucking the latter's blood. From one point of view this may be taken as symbolic of the Sun fertilizing the gross Earth by plunging his rays into it and so drawing forth its blood for the sustenance of all creatures; while from another more astronomical aspect it symbolizes the conquest of the Sun over winter in the moment of "passing over" the sign of the Bull, and the depletion of the generative power of the Bull by the Scorpion—which of course is the autumnal sign of the Zodiac and herald of winter. One such Mithraic group was found at Ostia, where there was a large subterranean Temple "to the invincible god Mithras."

In the worship of Attis there were (as I have already indicated) many points of resemblance to the Christian cult. On the 22nd March (the Vernal Equinox) a pinetree was cut in the woods and brought into the Temple of Cybele. It was treated almost as a divinity, was decked with violets, and the effigy of a young man tied to the stem (cf. the Crucifixion). The 24th was called the "Day of Blood"; the High Priest first drew blood from his own arms; and then the others gashed and slashed themselves, and spattered the altar and the sacred tree with blood; while novices made themselves eunuchs "for the kingdom of heaven's sake." The effigy was afterwards laid in a tomb. But when night fell, says Dr. Frazer, sorrow was turned to joy. A light was brought, and the tomb was found to be empty. The next day, the 25th, was the festival of the Resurrection; and ended in carnival and license (the Hilaria). Further, says Dr. Frazer, these mysteries "seem to have included a sacramental meal and a baptism of blood."

"In the baptism the devotee, crowned with gold and wreathed with fillets, descended into a pit, the mouth of which was covered with a wooden grating. A bull, adorned with garlands of flowers, its forehead glittering with gold leaf, was then driven on to the grating and there stabbed to death with a consecrated spear. Its hot reeking blood poured in torrents through the apertures, and was received with devout eagerness by the worshiper on every part of his person and garments, till he emerged from the pit,

drenched, dripping, and scarlet from head to foot, to receive the homage, nay the adoration, of his fellows—as one who had been born again to eternal life and had washed away his sins in the blood of the bull.” And Frazer continuing says: “That the bath of blood derived from slaughter of the bull (tauro-bolium) was believed to regenerate the devotee for eternity is proved by an inscription found at Rome, which records that a certain Sextilius Agesilaus Aedesius, who dedicated an altar to Attis and the mother of the gods (Cybele) was taurobolio criobolio que in aeternum renatus.” “In the procedure of the Taurobolia and Criobolia,” says Mr. J. M. Robertson, “which grew very popular in the Roman world, we have the literal and original meaning of the phrase ‘washed in the blood of the lamb’; the doctrine being that resurrection and eternal life were secured by drenching or sprinkling with the actual blood of a sacrificial bull or ram.” For the POPULARITY of the rite we may quote Franz Cumont, who says:—“Cette douche sacree (taurobolium) pareit avoir ete administree en Cappadoce dans un grand nombre de sanctuaires, et en particulier dans ceux de Ma la grande divinite indigene, et dans ceux: de Anahita.”

Whether Mr. Robertson is right in ascribing to the priests (as he appears to do) so materialistic a view of the potency of the actual blood is, I should say, doubtful. I do not myself see that there is any reason for supposing that the priests of Mithra or Attis regarded baptism by blood very differently from the way in which the Christian Church has generally regarded baptism by water—namely, as a SYMBOL of some inner regeneration. There may certainly have been a little more of the MAGICAL view and a little less of the symbolic, in the older religions; but the difference was probably on the whole more one of degree than of essential disparity. But however that may be, we cannot but be struck by the extraordinary analogy between the tombstone inscriptions of that period “born again into eternity by the blood of the Bull or the Ram,” and the corresponding texts in our graveyards to-day. F. Cumont in his elaborate work, *Textes et Monuments relatifs aux Mysteres de Mithra* (2 vols., Brussels, 1899) gives a great number of texts and epitaphs of the same character as that above-quoted, and they are well worth studying by those interested in the subject. Cumont, it may be noted (vol. i, p. 305), thinks that the story of Mithra and the slaying of the Bull must have originated among some pastoral people to whom the bull was the source of all life. The Bull in heaven—the symbol of the triumphant Sun-god—and the earthly bull, sacrificed for the good of humanity were one and the same; the god, in fact, SACRIFICED HIMSELF OR HIS REPRESENTATIVE. And Mithra was the hero who first won this conception of divinity for mankind—though of course it is in essence quite similar to the conception put forward by the Christian Church.

As illustrating the belief that the Baptism by Blood was accompanied by a real regeneration of the devotee, Frazer quotes an ancient writer who says that for some time after the ceremony the fiction of a new birth was kept up by dieting the devotee on MILK, like a new-born babe. And it is interesting in that connection to find that even in the present day a diet of ABSOLUTELY NOTHING BUT MILK for six or eight weeks is by many doctors recommended as the only means of getting rid of deep-seated illnesses and enabling a patient’s organism to make a completely new start in life.

“At Rome,” he further says (p. 230), “the new birth and the remission of sins by the shedding of bull’s blood appear to have been carried out above all at the sanctuary of the Phrygian Goddess (Cybele) on the Vatican Hill, at or near the spot where the great basilica of St. Peter’s now stands; for many inscriptions relating to the rites were found when the church was being enlarged in 1608 or 1609. From the Vatican as a centre,” he continues, “this barbarous system of superstition seems to have spread to other parts of the Roman empire. Inscriptions found in Gaul and Germany prove that provincial sanctuaries modelled their ritual on that of the Vatican.”

It would appear then that at Rome in the quiet early days of the Christian Church, the rites and ceremonials of Mithra and Cybele, probably much intermingled and blended, were exceedingly popular. Both religions had been recognized by the Roman State, and the Christians, persecuted and despised as they were, found it hard to make any headway against them—the more so perhaps because the Christian doctrines appeared in many respects to be merely faint replicas and copies of the older creeds. Robertson maintains that a he-lamb was sacrificed in the Mithraic mysteries, and he quotes Porphyry as saying that “a place near the equinoctial circle was assigned to Mithra as an appropriate seat; and on this account he bears the sword of the Ram [Aries] which is a sign of Mars [Ares].” Similarly among the early Christians, it is said, a ram or lamb was sacrificed in the Paschal mystery.

Many people think that the association of the Lamb-god with the Cross arose from the fact that the constellation Aries at that time WAS on the heavenly cross (the crossways of the Ecliptic and Equator—see diagram, ch. iii), and in the very place through which the Sungod had to pass just before his final triumph. And it is curious to find that Justin Martyr in his Dialogue with Trypho (a Jew) alludes to an old Jewish practice of roasting a Lamb on spits arranged in the form of a Cross. “The lamb,” he says, meaning apparently the Paschal lamb, “is roasted and dressed up in the form of a cross. For one spit is transfixed right through the lower parts up to the head, and one across the back, to which are attached the legs [forelegs] of the lamb.”

To-day in Morocco at the festival of Eid-el-Kebir, corresponding to the Christian Easter, the Mohammedans sacrifice a young ram and hurry it still bleeding to the precincts of the Mosque, while at the same time every household slays a lamb, as in the Biblical institution, for its family feast.

But it will perhaps be said, “You are going too fast and proving too much. In the anxiety to show that the Lamb-god and the sacrifice of the Lamb were honored by the devotees of Mithra and Cybele in the Rome of the Christian era, you are forgetting that the sacrifice of the Bull and the baptism in bull’s blood were the salient features of the Persian and Phrygian ceremonials, some centuries earlier. How can you reconcile the existence side by side of divinities belonging to such different periods, or ascribe them both to an astronomical origin?” The answer is simple enough. As I have explained before, the Precession of the Equinoxes caused the Sun, at its moment of triumph

over the powers of darkness, to stand at one period in the constellation of the Bull, and at a period some two thousand years later in the constellation of the Ram. It was perfectly natural therefore that a change in the sacred symbols should, in the course of time, take place; yet perfectly natural also that these symbols, having once been consecrated and adopted, should continue to be honored and clung to long after the time of their astronomical appropriateness had passed, and so to be found side by side in later centuries. The devotee of Mithra or Attis on the Vatican Hill at Rome in the year 200 A.D. probably had as little notion or comprehension of the real origin of the sacred Bull or Ram which he adored, as the Christian in St. Peter's to-day has of the origin of the Lamb-god whose vicegerent on earth is the Pope.

It is indeed easy to imagine that the change from the worship of the Bull to the worship of the Lamb which undoubtedly took place among various peoples as time went on, was only a ritual change initiated by the priests in order to put on record and harmonize with the astronomical alteration. Anyhow it is curious that while Mithra in the early times was specially associated with the bull, his association with the lamb belonged more to the Roman period. Somewhat the same happened in the case of Attis. In the Bible we read of the indignation of Moses at the setting up by the Israelites of a Golden Calf, AFTER the sacrifice of the ram-lamb had been instituted—as if indeed the rebellious people were returning to the earlier cult of Apis which they ought to have left behind them in Egypt. In Egypt itself, too, we find the worship of Apis, as time went on, yielding place to that of the Ram-headed god Amun, or Jupiter Ammon. So that both from the Bible and from Egyptian history we may conclude that the worship of the Lamb or Ram succeeded to the worship of the Bull.

Finally it has been pointed out, and there may be some real connection in the coincidence, that in the quite early years of Christianity the FISH came in as an accepted symbol of Jesus Christ. Considering that after the domination of Taurus and Aries, the Fish (Pisces) comes next in succession as the Zodiacal sign for the Vernal Equinox, and is now the constellation in which the Sun stands at that period, it seems not impossible that the astronomical change has been the cause of the adoption of this new symbol.

Anyhow, and allowing for possible errors or exaggerations, it becomes clear that the travels of the Sun through the belt of constellations which forms the Zodiac must have had, from earliest times, a profound influence on the generation of religious myths and legends. To say that it was the only influence would certainly be a mistake. Other causes undoubtedly contributed. But it was a main and important influence. The origins of the Zodiac are obscure; we do not know with any certainty the reasons why the various names were given to its component sections, nor can we measure the exact antiquity of these names; but—pre-supposing the names of the signs as once given—it is not difficult to imagine the growth of legends connected with the Sun's course among them.

Of all the ancient divinities perhaps Hercules is the one whose role as a Sungod is most generally admitted. The helper of gods and men, a mighty Traveller, and invoked everywhere as the Saviour, his labors for the good of the world became ultimately defined and systematized as twelve and corresponding in number to the signs of the Zodiac. It is true that this systematization only took place at a late period, probably in Alexandria; also that the identification of some of the Labors with the actual signs as we have them at present is not always clear. But considering the wide prevalence of the Hercules myth over the ancient world and the very various astronomical systems it must have been connected with in its origin, this lack of exact correspondence is hardly to be wondered at.

The Labors of Hercules which chiefly interest us are: (1) The capture of the Bull, (2) the slaughter of the Lion, (3) the destruction of the Hydra, (4) of the Boar, (5) the cleansing of the stables of Augeas, (6) the descent into Hades and the taming of Cerberus. The first of these is in line with the Mithraic conquest of the Bull; the Lion is of course one of the most prominent constellations of the Zodiac, and its conquest is obviously the work of a Saviour of mankind; while the last four labors connect themselves very naturally with the Solar conflict in winter against the powers of darkness. The Boar (4) we have seen already as the image of Typhon, the prince of darkness; the Hydra (3) was said to be the offspring of Typhon; the descent into Hades (6)—generally associated with Hercules' struggle with and victory over Death—links on to the descent of the Sun into the underworld, and its long and doubtful strife with the forces of winter; and the cleansing of the stables of Augeas (5) has the same signification. It appears in fact that the stables of Augeas was another name for the sign of Capricorn through which the Sun passes at the Winter solstice—the stable of course being an underground chamber—and the myth was that there, in this lowest tract and backwater of the Ecliptic all the malarious and evil influences of the sky were collected, and the Sungod came to wash them away (December was the height of the rainy season in Judaea) and cleanse the year towards its rebirth.

It should not be forgotten too that even as a child in the cradle Hercules slew two serpents sent for his destruction—the serpent and the scorpion as autumnal constellations figuring always as enemies of the Sungod—to which may be compared the power given to his disciples by Jesus “to tread on serpents and scorpions.” Hercules also as a Sungod compares curiously with Samson (mentioned above, ii), but we need not dwell on all the elaborate analogies that have been traced between these two heroes.

The Jesus-story, it will now be seen, has a great number of correspondences with the stories of former Sungods and with the actual career of the Sun through the heavens—so many indeed that they cannot well be attributed to mere coincidence or even to the blasphemous wiles of the Devil! Let us enumerate some of these. There are (1) the birth from a Virgin mother; (2) the birth in a stable (cave or underground chamber); and (3) on the 25th December (just after the winter solstice). There is (4) the Star in the East (Sirius) and (5) the arrival of the Magi (the “Three Kings”); there is (6) the threatened Massacre of the Innocents, and the consequent flight into a distant country (told

also of Krishna and other Sungods). There are the Church festivals of (7) Candlemas (2nd February), with processions of candles to symbolize the growing light; of (8) Lent, or the arrival of Spring; of (9) Easter Day (normally on the 25th March) to celebrate the crossing of the Equator by the Sun; and (10) simultaneously the outburst of lights at the Holy Sepulchre at Jerusalem. There is (11) the Crucifixion and death of the Lamb-God, on Good Friday, three days before Easter; there are (12) the nailing to a tree, (13) the empty grave, (14) the glad Resurrection (as in the cases of Osiris, Attis and others); there are (15) the twelve disciples (the Zodiacal signs); and (16) the betrayal by one of the twelve. Then later there is (17) Midsummer Day, the 24th June, dedicated to the Nativity of John the Baptist, and corresponding to Christmas Day; there are the festivals of (18) the Assumption of the Virgin (15th August) and of (19) the Nativity of the Virgin (8th September), corresponding to the movement of the god through Virgo; there is the conflict of Christ and his disciples with the autumnal asterisms, (20) the Serpent and the Scorpion; and finally there is the curious fact that the Church (21) dedicates the very day of the winter solstice (when any one may very naturally doubt the rebirth of the Sun) to St. Thomas, who doubted the truth of the Resurrection!

These are some of, and by no means all, the coincidences in question. But they are sufficient, I think, to prove—even allowing for possible margins of error—the truth of our general contention. To go into the parallelism of the careers of Krishna, the Indian Sungod, and Jesus would take too long; because indeed the correspondence is so extraordinarily close and elaborate. I propose, however, at the close of this chapter, to dwell now for a moment on the Christian festival of the Eucharist, partly on account of its connection with the derivation from the astronomical rites and Nature-celebrations already alluded to, and partly on account of the light which the festival generally, whether Christian or Pagan, throws on the origins of Religious Magic—a subject I shall have to deal with in the next chapter.

I have already (Ch. II) mentioned the Eucharistic rite held in commemoration of Mithra, and the indignant ascription of this by Justin Martyr to the wiles of the Devil. Justin Martyr clearly had no doubt about the resemblance of the Mithraic to the Christian ceremony. A Sacramental meal, as mentioned a few pages back, seems to have been held by the worshipers of Attis in commemoration of their god; and the 'mysteries' of the Pagan cults generally appear to have included rites—sometimes half-savage, sometimes more aesthetic—in which a dismembered animal was eaten, or bread and wine (the spirits of the Corn and the Vine) were consumed, as representing the body of the god whom his devotees desired to honor. But the best example of this practice is afforded by the rites of Dionysus, to which I will devote a few lines. Dionysus, like other Sun or Nature deities, was born of a Virgin (Semele or Demeter) untainted by any earthly husband; and born on the 25th. December. He was nurtured in a Cave, and even at that early age was identified with the Ram or Lamb, into whose form he was for the time being changed. At times also he was worshiped in the form of a Bull. He travelled far and wide; and brought the great gift of wine to mankind. He was called Liberator, and Saviour. His grave "was shown at Delphi in the inmost shrine of the temple of Apollo. Secret offerings were brought thither, while the women who were cele-

brating the feast woke up the new-born god. . . . Festivals of this kind in celebration of the extinction and resurrection of the deity were held (by women and girls only) amid the mountains at night, every third year, about the time of the shortest day. The rites, intended to express the excess of grief and joy at the death and reappearance of the god, were wild even to savagery, and the women who performed them were hence known by the expressive names of Bacchae, Maenads, and Thyiades. They wandered through woods and mountains, their flying locks crowned with ivy or snakes, brandishing wands and torches, to the hollow sounds of the drum, or the shrill notes of the flute, with wild dances and insane cries and jubilation.

Oxen, goats, even fawns and roes from the forest were killed, torn to pieces, and eaten raw. This in imitation of the treatment of Dionysus by the Titans”—who it was supposed had torn the god in pieces when a child.

Dupuis, one of the earliest writers (at the beginning of last century) on this subject, says, describing the mystic rites of Dionysus: “The sacred doors of the Temple in which the initiation took place were opened only once a year, and no stranger might ever enter. Night lent to these august mysteries a veil which was forbidden to be drawn aside—for whoever it might be. It was the sole occasion for the representation of the passion of Bacchus [Dionysus] dead, descended into hell, and rearsen—in imitation of the representation of the sufferings of Osiris which, according to Herodotus, were commemorated at Sais in Egypt. It was in that place that the partition took place of the body of the god, which was then eaten—the ceremony, in fact, of which our Eucharist is only a reflection; whereas in the mysteries of Bacchus actual raw flesh was distributed, which each of those present had to consume in commemoration of the death of Bacchus dismembered by the Titans, and whose passion, in Chios and Tenedos, was renewed each year by the sacrifice of a man who represented the god. Possibly it is this last fact which made people believe that the Christians (whose *hoc est corpus meum* and sharing of an Eucharistic meal were no more than a shadow of a more ancient rite) did really sacrifice a child and devour its limbs.”

That Eucharistic rites were very very ancient is plain from the Totem-sacraments of savages; and to this subject we shall now turn.

IV. TOTEM-SACRAMENTS AND EUCHARISTS

Much has been written on the origin of the Totem-system—the system, that is, of naming a tribe or a portion of a tribe (say a CLAN) after some ANIMAL—or sometimes—also after some plant or tree or Nature-element, like fire or rain or thunder; but at best the subject is a difficult one for us moderns to understand. A careful study has been made of it by Salamon Reinach in his *Cultes, Mythes et Religions*, where he formulates his conclusions in twelve statements or definitions; but even so—though his suggestions are helpful—he throws very little light on the real origin of the system.

There are three main difficulties. The first is to understand why primitive Man should name his Tribe after an animal or object of nature at all; the second, to understand on what principle he selected the particular name (a lion, a crocodile, a lady bird, a certain tree); the third, why he should make of the said totem a divinity, and pay honor and worship to it. It may be worth while to pause for a moment over these.

(1) The fact that the Tribe was one of the early things for which Man found it necessary to have a name is interesting, because it shows how early the solidarity and psychological actuality of the tribe was recognized; and as to the selection of a name from some animal or concrete object of Nature, that was inevitable, for the simple reason that there was nothing else for the savage to choose from. Plainly to call his tribe “The Wayfarers” or “The Pioneers” or the “Pacifists” or the “Invincibles,” or by any of the thousand and one names which modern associations adopt, would have been impossible, since such abstract terms had little or no existence in his mind. And again to name it after an animal was the most obvious thing to do, simply because the animals were by far the most important features or accompaniments of his own life. As I am dealing in this book largely with certain psychological conditions of human evolution, it has to be pointed out that to primitive man the animal was the nearest and most closely related of all objects. Being of the same order of consciousness as himself, the animal appealed to him very closely as his mate and equal. He made with regard to it little or no distinction from himself. We see this very clearly in the case of children, who of course represent the savage mind, and who regard animals simply as their mates and equals, and come quickly into rapport with them, not differentiating themselves from them.

(2) As to the particular animal or other object selected in order to give a name to the Tribe, this would no doubt be largely accidental. Any unusual incident might superstitiously precipitate a name. We can hardly imagine the Tribe scratching its congregated head in the deliberate effort to think out a suitable emblem for itself. That is not the way in which nicknames are invented in a school or anywhere else to-day. At the same time the heraldic appeal of a certain object of nature, animate or inanimate, would be deeply and widely felt. The strength of the lion, the fleetness of the deer, the food-value of a bear, the flight of a bird, the awful jaws of a crocodile, might easily mesmerize a whole tribe. Reinach points out, with great justice, that many tribes placed themselves under the protection of animals which were supposed (rightly or wrongly) to act

as guides and augurs, foretelling the future. "Diodorus," he says, "distinctly states that the hawk, in Egypt, was venerated because it foretold the future." [Birds generally act as weather-prophets.] "In Australia and Samoa the kangaroo, the crow and the owl premonish their fellow clansmen of events to come. At one time the Samoan warriors went so far as to rear owls for their prophetic qualities in war." [The jackal, or 'pathfinder'—whose tracks sometimes lead to the remains of a food-animal slain by a lion, and many birds and insects, have a value of this kind.] "The use of animal totems for purposes of augury is, in all likelihood, of great antiquity. Men must soon have realized that the senses of animals were acuter than their own; nor is it surprising that they should have expected their totems—that is to say, their natural allies—to forewarn them both of unsuspected dangers and of those provisions of nature, WELLS especially, which animals seem to scent by instinct." And again, beyond all this, I have little doubt that there are subconscious affinities which unite certain tribes to certain animals or plants, affinities whose origin we cannot now trace, though they are very real—the same affinities that we recognize as existing between individual PERSONS and certain objects of nature. W. H. Hudson—himself in many respects having this deep and primitive relation to nature—speaks in a very interesting and autobiographical volume of the extraordinary fascination exercised upon him as a boy, not only by a snake, but by certain trees, and especially by a particular flowering-plant "not more than a foot in height, with downy soft pale green leaves, and clusters of reddish blossoms, something like valerian." . . . "One of my sacred flowers," he calls it, and insists on the "inexplicable attraction" which it had for him. In various ways of this kind one can perceive how particular totems came to be selected by particular peoples.

(3) As to the tendency to divinize these totems, this arises no doubt partly out of question (2). The animal or other object admired on account of its strength or swiftness, or adopted as guardian of the tribe because of its keen sight or prophetic quality, or infinitely prized on account of its food-value, or felt for any other reason to have a peculiar relation and affinity to the tribe, is by that fact SET APART. It becomes taboo. It must not be killed—except under necessity and by sanction of the whole tribe—nor injured; and all dealings with it must be fenced round with regulations. It is out of this taboo or system of taboos that, according to Reinach, religion arose. "I propose (he says) to define religion as: A SUM OF SCRUPLES (TABOOS) WHICH IMPEDE THE FREE EXERCISE OF OUR FACULTIES." Obviously this definition is gravely deficient, simply because it is purely negative, and leaves out of account the positive aspect of the subject. In Man, the positive content of religion is the instinctive sense—whether conscious or subconscious—of an inner unity and continuity with the world around. This is the stuff out of which religion is made. The scruples or taboos which "impede the freedom" of this relation are the negative forces which give outline and form to the relation. These are the things which generate the RITES AND CEREMONIALS of religion; and as far as Reinach means by religion MERELY rites and ceremonies he is correct; but clearly he only covers half the subject. The tendency to divinize the totem is at least as much dependent on the positive sense of unity with it, as on the negative scruples which limit the relation in each particular case. But I shall return to this subject presently, and more than once, with the view of clarifying it. Just now it will be best to illustrate

the nature of Totems generally, and in some detail.

As would be gathered from what I have just said, there is found among all the more primitive peoples, and in all parts of the world, an immense variety of totem-names. The Dinkas, for instance, are a rather intelligent well-grown people inhabiting the upper reaches of the Nile in the vicinity of the great swamps. According to Dr. Seligman their clans have for totems the lion, the elephant, the crocodile, the hippopotamus, the fox, and the hyena, as well as certain birds which infest and damage the corn, some plants and trees, and such things as rain, fire, etc. "Each clan speaks of its totem as its ancestor, and refrains [as a rule] from injuring or eating it." The members of the Crocodile clan call themselves "brothers of the crocodile." The tribes of Bechuana-land have a very similar list of totem-names—the buffalo, the fish, the porcupine, the wild vine, etc. They too have a Crocodile clan, but they call the crocodile their FATHER! The tribes of Australia much the same again, with the differences suitable to their country; and the Red Indians of North America the same. Garcilasso, della Vega, the Spanish historian, son of an Inca princess by one of the Spanish conquerors of Peru and author of the well-known book *Commentarias Reales*, says in that book (i, 57), speaking of the pre-Inca period, "An Indian (of Peru) was not considered honorable unless he was descended from a fountain, river or lake, or even from the sea, or from a wild animal, as a bear, lion, tiger, eagle, or the bird they call cuntur (condor), or some other bird of prey." According to Lewis Morgan, the North American Indians of various tribes had for totems the wolf, bear, beaver, turtle, deer, snipe, heron, hawk, crane, loon, turkey, muskrat; pike, catfish, carp; buffalo, elk, reindeer, eagle, hare, rabbit, snake; reed-grass, sand, rock, and tobacco-plant.

So we might go on rather indefinitely. I need hardly say that in more modern and civilized life, relics of the totem system are still to be found in the forms of the heraldic creatures adopted for their crests by different families, and in the bears, lions, eagles, the sun, moon and stars and so forth, which still adorn the flags and are flaunted as the insignia of the various nations. The names may not have been **ORIGINALLY** adopted from any definite belief in blood-relationship with the animal or other object in question; but when, as Robertson says (*Pagan Christs*, p. 104), a "savage learned that he was 'a Bear' and that his father and grandfather and forefathers were so before him, it was really impossible, after ages in which totem- names thus passed current, that he should fail to assume that his folk were **DESCENDED** from a bear."

As a rule, as may be imagined, the savage tribesman will on no account **EAT** his tribal totem-animal. Such would naturally be deemed a kind of sacrilege. Also it must be remarked that some totems are hardly suitable for eating. Yet it is important to observe that occasionally, and guarding the ceremony with great precautions, it has been an almost universal custom for the tribal elders to call a feast at which an animal (either the totem or some other) **IS** killed and commonly eaten—and this in order that the tribesmen may absorb some virtue belonging to it, and may confirm their identity with the tribe and with each other. The eating of the bear or other animal, the sprinkling with its blood, and the general ritual in which the participants shared its flesh, or dressed

and disguised themselves in its skin, or otherwise identified themselves with it, was to them a symbol of their community of life with each other, and a means of their renewal and salvation in the holy emblem. And this custom, as the reader will perceive, became the origin of the Eucharists and Holy Communion of the later religions.

Professor Robertson-Smith's celebrated Camel affords an instance of this. It appears that St. Nilus (fifth century) has left a detailed account of the occasional sacrifice in his time of a spotless white camel among the Arabs of the Sinai region, which closely resembles a totemic communion-feast. The uncooked blood and flesh of the animal had to be entirely consumed by the faithful before daybreak. "The slaughter of the victim, the sacramental drinking of the blood, and devouring in wild haste of the pieces of still quivering flesh, recall the details of the Dionysiac and other festivals." Robertson-Smith himself says:—"The plain meaning is that the victim was devoured before its life had left the still warm blood and flesh . . . and that thus in the most literal way, all those who shared in the ceremony absorbed part of the victim's life into themselves. One sees how much more forcibly than any ordinary meal such a rite expresses the establishment or confirmation of a bond of common life between the worshipers, and also, since the blood is shed upon the altar itself, between the worshipers and their god. In this sacrifice, then, the significant factors are two: the conveyance of the living blood to the godhead, and the absorption of the living flesh and blood into the flesh and blood of the worshippers. Each of these is effected in the simplest and most direct manner, so that the meaning of the ritual is perfectly transparent."

It seems strange, of course, that men should eat their totems; and it must not by any means be supposed that this practice is (or was) universal; but it undoubtedly obtains in some cases. As Miss Harrison says (*Themis*, p. 123); "you do not as a rule eat your relations," and as a rule the eating of a totem is tabu and forbidden, but (Miss Harrison continues) "at certain times and under certain restrictions a man not only may, but **MUST**, eat of his totem, though only sparingly, as of a thing sacrosanct." The ceremonial carried out in a communal way by the tribe not only identifies the tribe with the totem (animal), but is held, according to early magical ideas, and when the animal is desired for food, to favor its manipulation. The human tribe partakes of the mana or life-force of the animal, and is strengthened; the animal tribe is sympathetically renewed by the ceremonial and multiplies exceedingly. The slaughter of the sacred animal and (often) the simultaneous outpouring of human blood seals the compact and confirms the magic. This is well illustrated by a ceremony of the 'Emu' tribe referred to by Dr. Frazer:—

"In order to multiply Emus which are an important article of food, the men of the Emu totem in the Arunta tribe proceed as follows: They clear a small spot of level ground, and opening veins in their arms they let the blood stream out until the surface of the ground for a space of about three square yards is soaked with it. When the blood has dried and caked, it forms a hard and fairly impermeable surface, on which they paint the sacred design of the emu totem, especially the parts of the bird which they like best to eat, namely, the fat and the eggs. Round this painting the men sit and sing.

Afterwards performers wearing long head-dresses to represent the long neck and small head of the emu, mimic the appearance of the bird as it stands aimlessly peering about in all directions.”

Thus blood sacrifice comes in; and—(whether this has ever actually happened in the case of the Central Australians I know not)—we can easily imagine a member of the Emu tribe, and disguised as an actual emu, having been ceremonially slaughtered as a firstfruits and promise of the expected and prayed-for emu-crop; just as the same certainly HAS happened in the case of men wearing beast-masks of Bulls or Rams or Bears being sacrificed in propitiation of Bull-gods, Ram-gods or Bear-gods or simply in pursuance of some kind of magic to favor the multiplication of these food-animals.

“In the light of totemistic ways of thinking we see plainly enough the relation of man to food-animals. You need or at least desire flesh food, yet you shrink from slaughtering ‘your brother the ox’; you desire his mana, yet you respect his tabu, for in you and him alike runs the common life-blood. On your own individual responsibility you would never kill him; but for the common weal, on great occasions, and in a fashion conducted with scrupulous care, it is expedient that he die for his people, and that they feast upon his flesh.”

In her little book *Ancient Art and Ritual* Jane Harrison describes the dedication of a holy Bull, as conducted in Greece at Elis, and at Magnesia and other cities. “There at the annual fair year by year the stewards of the city bought a Bull ‘the finest that could be got,’ and at the new moon of the month at the beginning of seed-time [? April] they dedicated it for the city’s welfare. . . . The Bull was led in procession at the head of which went the chief priest and priestess of the city. With them went a herald and sacrificer, and two bands of youths and maidens. So holy was the Bull that nothing unlucky might come near him. The herald pronounced aloud a prayer for ‘the safety of the city and the land, and the citizens, and the women and children, for peace and wealth, and for the bringing forth of grain and all other fruits, and of cattle.’ All this longing for fertility, for food and children, focuses round the holy Bull, whose holiness is his strength and fruitfulness.” The Bull is sacrificed. The flesh is divided in solemn feast among those who take part in the procession. “The holy flesh is not offered to a god, it is eaten—to every man his portion—by each and every citizen, that he may get his share of the strength of the Bull, of the luck of the State.” But at Athens the Bouphonia, as it was called, was followed by a curious ceremony. “The hide was stuffed with straw and sewed up, and next the stuffed animal was set on its feet and yoked to a plough as though it were ploughing. The Death is followed by a Resurrection. Now this is all important. We are accustomed to think of sacrifice as the death, the giving up, the renouncing of something. But SACRIFICE does not mean ‘death’ at all. It means MAKING HOLY, sanctifying; and holiness was to primitive man just special strength and life. What they wanted from the Bull was just that special life and strength which all the year long they had put into him, and nourished and fostered. That life was in his blood. They could not eat that flesh nor drink that blood unless they killed him. So he must die. But it was not to give him up to the gods that they killed him, not to ‘sacrifice’ him

in our sense, but to have him, keep him, eat him, live BY him and through him, by his grace.”

We have already had to deal with instances of the ceremonial eating of the sacred he-Lamb or Ram, immolated in the Spring season of the year, and partaken of in a kind of communal feast—not without reference (at any rate in later times) to a supposed Lamb-god. Among the Ainos in the North of Japan, as also among the Gilyaks in Eastern Siberia, the Bear is the great food-animal, and is worshipped as the supreme giver of health and strength. There also a similar ritual of sacrifice occurs. A perfect Bear is caught and caged. He is fed up and even pampered to the day of his death. “Fish, brandy and other delicacies are offered to him. Some of the people prostrate themselves before him; his coming into a house brings a blessing, and if he sniffs at the food that brings a blessing too.” Then he is led out and slain. A great feast takes place, the flesh is divided, cupfuls of the blood are drunk by the men; the tribe is united and strengthened, and the Bear-god blesses the ceremony—the ideal Bear that has given its life for the people.

That the eating of the flesh of an animal or a man conveys to you some of the qualities, the life-force, the mana, of that animal or man, is an idea which one often meets with among primitive folk. Hence the common tendency to eat enemy warriors slain in battle against your tribe. By doing so you absorb some of their valor and strength. Even the enemy scalps which an Apache Indian might hang from his belt were something magical to add to the Apache’s power. As Gilbert Murray says, “you devoured the holy animal to get its mana, its swiftness, its strength, its great endurance, just as the savage now will eat his enemy’s brain or heart or hands to get some particular quality residing there.” Even—as he explains on the earlier page—mere CONTACT was often considered sufficient—“we have holy pillars whose holiness consists in the fact that they have been touched by the blood of a bull.” And in this connection we may note that nearly all the Christian Churches have a great belief in the virtue imparted by the mere ‘laying on of hands.’

In quite a different connection—we read that among the Spartans a warrior-boy would often beg for the love of the elder warrior whom he admired (i. e. the contact with his body) in order to obtain in that way a portion of the latter’s courage and prowess. That through the mediation of the lips one’s spirit may be united to the spirit of another person is an idea not unfamiliar to the modern mind; while the exchange of blood, clothes, locks of hair, etc., by lovers is a custom known all over the world.

To suppose that by eating another you absorb his or her soul is somewhat naive certainly. Perhaps it IS more native, more primitive. Yet there may be SOME truth even in that idea. Certainly the food that one eats has a psychological effect, and the flesh-eaters among the human race have a different temperament as a rule from the fruit and vegetable eaters, while among the animals (though other causes may come in here) the Carnivora are decidedly more cruel and less gentle than the Herbivora.

To return to the rites of Dionysus, Gilbert Murray, speaking of Orphism—a great wave of religious reform which swept over Greece and South Italy in the sixth century B.C.—says: “A curious relic of primitive superstition and cruelty remained firmly imbedded in Orphism, a doctrine irrational and unintelligible, and for that very reason wrapped in the deepest and most sacred mystery: a belief in the SACRIFICE OF DIONYSUS HIMSELF, AND THE PURIFICATION OF MAN BY HIS BLOOD. It seems possible that the savage Thracians, in the fury of their worship on the mountains, when they were possessed by the god and became ‘wild beasts,’ actually tore with their teeth and hands any hares, goats, fawns or the like that they came across. . . . The Orphic congregations of later times, in their most holy gatherings, solemnly partook of the blood of a bull, which was by a mystery the blood of Dionysus- Zagreus himself, the Bull of God, slain in sacrifice for the purification of man.”

Such instances of early communal feasts, which fulfilled the double part of confirming on the one hand the solidarity of the tribe, and on the other of bringing the tribe, by the shedding of the blood of a divine Victim into close relationship with the very source of its life, are plentiful to find. “The sacramental rite,” says Professor Robertson-Smith, “is also an atoning rite, which brings the community again into harmony with its alienated god—atonement being simply an act of communion designed to wipe out all memory of previous estrangement.” With this subject I shall deal more specially in chapter vii below. Meanwhile as instances of early Eucharists we may mention the following cases, remembering always that as the blood is regarded as the Life, the drinking or partaking of, or sprinkling with, blood is always an acknowledgment of the common life; and that the juice of the grape being regarded as the blood of the Vine, wine in the later ceremonials quite easily and naturally takes the place of the blood in the early sacrifices.

Thus P. Andrada La Crozius, a French missionary, and one of the first Christians who went to Nepal and Thibet, says in his History of India: “Their Grand Lama celebrates a species of sacrifice with BREAD and WINE, in which, after taking a small quantity himself, he distributes the rest among the Lamas present at this ceremony.” “The old Egyptians celebrated the resurrection of Osiris by a sacrament, eating the sacred cake or wafer after it had been consecrated by the priest, and thereby becoming veritable flesh of his flesh.” As is well known, the eating of bread or dough sacramentally (sometimes mixed with blood or seed) as an emblem of community of life with the divinity, is an extremely ancient practice or ritual. Dr. Frazer says of the Aztecs, that “twice a year, in May and December, an image of the great god Huitzilopochtli was made of dough, then broken in pieces and solemnly eaten by his worshipers.” And Lord Kingsborough in his Mexican Antiquities (vol. vi, p. 220) gives a record of a “most Holy Supper” in which these people ate the flesh of their god. It was a cake made of certain seeds, “and having made it, they blessed it in their manner, and broke it into pieces, which the high priest put into certain very clean vessels, and took a thorn of maguey which resembles a very thick needle, with which he took up with the utmost reverence single morsels, which he put into the mouth of each individual in the manner of a communion.” Acostas confirms this and similar accounts. The Peruvians partook of a sacrament

consisting of a pudding of coarsely ground maize, of which a portion had been smeared on the idol. The priest sprinkled it with the blood of the victim before distributing it to the people." Priest and people then all took their shares in turn, "with great care that no particle should be allowed to fall to the ground—this being looked upon as a great sin."

Moving from Peru to China (instead of 'from China to Peru') we find that "the Chinese pour wine (a very general substitute for blood) on a straw image of Confucius, and then all present drink of it, and taste the sacrificial victim, in order to participate in the grace of Confucius." [Here again the Corn and Wine are blended in one rite.] And of Tartary Father Grueber thus testifies: "This only I do affirm, that the devil so mimics the Catholic Church there, that although no European or Christian has ever been there, still in all essential things they agree so completely with the Roman Church, as even to celebrate the Host with bread and wine: with my own eyes I have seen it." These few instances are sufficient to show the extraordinarily wide diffusion of Totem-sacraments and Eucharistic rites all over the world.

V. FOOD AND VEGETATION MAGIC

I have wandered, in pursuit of Totems and the Eucharist, some way from the astronomical thread of Chapters II and III, and now it would appear that in order to understand religious origins we must wander still farther. The chapters mentioned were largely occupied with Sungods and astronomical phenomena, but now we have to consider an earlier period when there were no definite forms of gods, and when none but the vaguest astronomical knowledge existed. Sometimes in historical matters it is best and safest to move thus backwards in Time, from the things recent and fairly well known to things more ancient and less known. In this way we approach more securely to some understanding of the dim and remote past.

It is clear that before any definite speculations on heaven-dwelling gods or divine beings had arisen in the human mind—or any clear theories of how the sun and moon and stars might be connected with the changes of the seasons on the earth—there were still certain obvious things which appealed to everybody, learned or unlearned alike. One of these was the return of Vegetation, bringing with it the fruits or the promise of the fruits of the earth, for human food, and also bringing with it increase of animal life, for food in another form; and the other was the return of Light and Warmth, making life easier in all ways. Food delivering from the fear of starvation; Light and Warmth delivering from the fear of danger and of cold. These were three glorious things which returned together and brought salvation and renewed life to man. The period of their return was 'Spring,' and though Spring and its benefits might fade away in time, still there was always the HOPE of its return—though even so it may have been a long time in human evolution before man discovered that it really did always return, and (with certain allowances) at equal intervals of time.

Long then before any Sun or Star gods could be called in, the return of the Vegetation must have enthralled man's attention, and filled him with hope and joy. Yet since its return was somewhat variable and uncertain the question, What could man do to assist that return?, naturally became a pressing one. It is now generally held that the use of Magic—sympathetic magic—arose in this way. Sympathetic magic seems to have been generated by a belief that your own actions cause a similar response in things and persons around you. Yet this belief did not rest on any philosophy or argument, but was purely instinctive and sometimes of the nature of a mere corporeal reaction. Every schoolboy knows how in watching a comrade's high jump at the Sports he often finds himself lifting a knee at the moment 'to help him over'; at football matches quarrels sometimes arise among the spectators by reason of an ill-placed kick coming from a too enthusiastic on-looker, behind one; undergraduates running on the tow-path beside their College boat in the races will hurry even faster than the boat in order to increase its speed; there is in each case an automatic bodily response increased by one's own desire. A person ACTS the part which he desires to be successful. He thinks to transfer his energy in that way. Again, if by chance one witnesses a painful accident, a crushed foot or what-not, it commonly happens that one feels a pain in the same part oneself—a sympathetic pain. What more natural than to suppose that the pain really is trans-

ferred from the one person to the other? and how easy the inference that by tormenting a wretched scape-goat or crucifying a human victim in some cases the sufferings of people may be relieved or their sins atoned for?

Simaetha, it will be remembered, in the second Idyll of Theocritus, curses her faithless lover Delphis, and as she melts his waxen image she prays that HE TOO MAY MELT. All this is of the nature of Magic, and is independent of and generally more primitive than Theology or Philosophy. Yet it interests us because it points to a firm instinct in early man—to which I have already alluded—the instinct of his unity and continuity with the rest of creation, and of a common life so close that his lightest actions may cause a far-reaching reaction in the world outside.

Man, then, independently of any belief in gods, may assist the arrival of Spring by magic ceremonies. If you want the Vegetation to appear you must have rain; and the rain-maker in almost all primitive tribes has been a MOST important personage. Generally he based his rites on quite fanciful associations, as when the rain-maker among the Mandans wore a raven's skin on his head (bird of the storm) or painted his shield with red zigzags of lightning; but partly, no doubt, he had observed actual facts, or had had the knowledge of them transmitted to him—as, for instance that when rain is impending loud noises will bring about its speedy downfall, a fact we moderns have had occasion to notice on battlefields. He had observed perhaps that in a storm a specially loud clap of thunder is generally followed by a greatly increased downpour of rain. He had even noticed (a thing which I have often verified in the vicinity of Sheffield) that the copious smoke of fires will generate rain-clouds—and so quite naturally he concluded that it was his smoking SACRIFICES which had that desirable effect. So far he was on the track of elementary Science. And so he made “bull-roarers” to imitate the sound of wind and the blessed rain-bringing thunder, or clashed great bronze cymbals together with the same object. Bull-voices and thunder-drums and the clashing of cymbals were used in this connection by the Greeks, and are mentioned by Aeschylus; but the bull-roarer, in the form of a rhombus of wood whirled at the end of a string, seems to be known, or to have been known, all over the world. It is described with some care by Mr. Andrew Lang in his *Custom and Myth* (pp. 29-44), where he says “it is found always as a sacred instrument employed in religious mysteries, in New Mexico, Australia, New Zealand, ancient Greece, and Africa.”

Sometimes, of course, the rain-maker was successful; but of the inner causes of rain he knew next to nothing; he was more ignorant even than we are! His main idea was a more specially ‘magical’ one—namely, that the sound itself would appeal to the SPIRITS of rain and thunder and cause them to give a response. For of course the thunder (in Hebrew Bath-Kol, “the daughter of the Voice”) was everywhere regarded as the manifestation of a spirit. To make sounds like thunder would therefore naturally call the attention of such a spirit; or he, the rain-maker, might make sounds like rain. He made gourd-rattles (known in ever so many parts of the world) in which he rattled dried seeds or small pebbles with a most beguiling and rain-like insistence; or sometimes, like the priests of Baal in the Bible, he would cut himself with knives till the blood fell

upon the ground in great drops suggestive of an oncoming thunder-shower. "In Mexico the rain-god was propitiated with sacrifices of children. If the children wept and shed abundant tears, they who carried them rejoiced, being convinced that rain would also be abundant." Sometimes he, the rain-maker, would WHISTLE for the wind, or, like the Omaha Indians, flap his blankets for the same purpose.

In the ancient myth of Demeter and Persephone—which has been adopted by so many peoples under so many forms—Demeter the Earth-mother loses her daughter Persephone (who represents of course the Vegetation), carried down into the underworld by the evil powers of Darkness and Winter. And in Greece there was a yearly ceremonial and ritual of magic for the purpose of restoring the lost one and bringing her back to the world again. Women carried certain charms, "fir-cones and snakes and unnamable objects made of paste, to ensure fertility; there was a sacrifice of pigs, who were thrown into a deep cleft of the earth, and their remains afterwards collected and scattered as a charm over the fields." Fir-cones and snakes from their very forms were emblems of male fertility; snakes, too, from their habit of gliding out of their own skins with renewed brightness and color were suggestive of resurrection and re-vivification; pigs and sows by their exceeding fruitfulness would in their hour of sacrifice remind old mother Earth of what was expected from her! Moreover, no doubt it had been observed that the scattering of dead flesh over the ground or mixed with the seed, did bless the ground to a greater fertility; and so by a strange mixture of primitive observation with a certain child-like belief that by means of symbols and suggestions Nature could be appealed to and induced to answer to the desires and needs for her children this sort of ceremonial Magic arose. It was not exactly Science, and it was not exactly Religion; but it was a naive, and perhaps not altogether mistaken, sense of the bond between Nature and Man.

For we can perceive that earliest man was not yet consciously differentiated from Nature. Not only do we see that the tribal life was so strong that the individual seldom regarded himself as different or separate or opposed to the rest of the tribe; but that something of the same kind was true with regard to his relation to the Animals and to Nature at large. This outer world was part of himself, was also himself. His sub-conscious sense of unity was so great that it largely dominated his life. That brain-cleverness and brain-activity which causes modern man to perceive such a gulf between him and the animals, or between himself and Nature, did not exist in the early man. Hence it was no difficulty to him to believe that he was a Bear or an Emu. Sub-consciously he was wiser than we are. He knew that he was a bear or an emu, or any other such animal as his totem-creed led him to fix his mind upon. Hence we find that a familiarity and common consent existed between primitive man and many of his companion animals such as has been lost or much attenuated in modern times. Elisee Reclus in his very interesting paper *La Grande Famille* gives support to the idea that the so-called domestication of animals did not originally arise from any forcible subjugation of them by man, but from a natural amity with them which grew up in the beginning from common interests, pursuits and affections. Thus the chetah of India (and probably the puma of Brazil) from far-back times took to hunting in the company of his two-legged

and bow-and-arrow-armed friend, with whom he divided the spoil. W. H. Hudson declares that the Puma, wild and fierce though it is, and capable of killing the largest game, will never even to-day attack man, but when maltreated by the latter submits to the outrage, unresisting, with mournful cries and every sign of grief. The Llama, though domesticated in a sense, has never allowed the domination of the whip or the bit, but may still be seen walking by the side of the Brazilian peasant and carrying his burdens in a kind of proud companionship. The mutual relations of Women and the Cow, or of Man and the Horse (also the Elephant) reach so far into the past that their origin cannot be traced. The Swallow still loves to make its home under the cottage eaves and still is welcomed by the inmates as the bringer of good fortune. Elisee Reclus assures us that the Dinka man on the Nile calls to certain snakes by name and shares with them the milk of his cows.

And so with Nature. The communal sense, or subconscious perception, which made primitive men feel their unity with other members of their tribe, and their obvious kinship with the animals around them, brought them also so close to general Nature that they looked upon the trees, the vegetation, the rain, the warmth of the sun, as part of their bodies, part of themselves. Conscious differentiation had not yet set in. To cause rain or thunder you had to make rain- or thunder-like noises; to encourage Vegetation and the crops to leap out of the ground, you had to leap and dance. "In Swabia and among the Transylvanian Saxons it is a common custom (says Dr. Frazer) for a man who has some hemp to leap high in the field in the belief that this will make the hemp grow tall." Native May-pole dances and Jacks in the Green have hardly yet died out—even in this most civilized England. The bower of green boughs, the music of pipes, the leaping and the twirling, were all an encouragement to the arrival of Spring, and an expression of Sympathetic Magic. When you felt full of life and energy and virility in yourself you naturally leapt and danced, so why should you not sympathetically do this for the energizing of the crops? In every country of the world the vernal season and the resurrection of the Sun has been greeted with dances and the sound of music. But if you wanted success in hunting or in warfare then you danced before-hand mimic dances suggesting the successful hunt or battle. It was no more than our children do to-day, and it all was, and is, part of a natural-magic tendency in human thought.

Let me pause here for a moment. It is difficult for us with our academical and somewhat school-boardy minds to enter into all this, and to understand the sense of (unconscious or sub-conscious) identification with the world around which characterized the primitive man—or to look upon Nature with his eyes. A Tree, a Snake, a Bull, an Ear of Corn. WE know so well from our botany and natural history books what these things are. Why should our minds dwell on them any longer or harbor a doubt as to our perfect comprehension of them?

And yet (one cannot help asking the question): Has any one of us really ever SEEN a Tree? I certainly do not think that I have—except most superficially. That very penetrating observer and naturalist, Henry D. Thoreau, tells us that he would often make an appointment to visit a certain tree, miles away—but what or whom he saw when he got

there, he does not say. Walt Whitman, also a keen observer, speaks of a tulip-tree near which he sometimes sat—"the Apollo of the woods—tall and graceful, yet robust and sinewy, inimitable in hang of foliage and throwing-out of limb; as if the beauteous, vital, leafy creature could walk, if it only would"; and mentions that in a dream-trance he actually once saw his "favorite trees step out and promenade up, down and around VERY CURIOUSLY." Once the present writer seemed to have a partial vision of a tree. It was a beech, standing somewhat isolated, and still leafless in quite early Spring. Suddenly I was aware of its skyward-reaching arms and up-turned finger-tips, as if some vivid life (or electricity) was streaming through them far into the spaces of heaven, and of its roots plunged in the earth and drawing the same energies from below. The day was quite still and there was no movement in the branches, but in that moment the tree was no longer a separate or separable organism, but a vast being ramifying far into space, sharing and uniting the life of Earth and Sky, and full of a most amazing activity.

The reader of this will probably have had some similar experiences. Perhaps he will have seen a full-foliaged Lombardy poplar swaying in half a gale in June—the wind and the sun streaming over every little twig and leaf, the tree throwing out its branches in a kind of ecstasy and bathing them in the passionately boisterous caresses of its two visitants; or he will have heard the deep glad murmur of some huge sycamore with ripening seed clusters when after weeks of drought the steady warm rain brings relief to its thirst; and he will have known that these creatures are but likenesses of himself, intimately and deeply-related to him in their love and hunger longing, and, like himself too, unfathomed and unfathomable.

It would be absurd to credit early man with conscious speculations like these, belonging more properly to the twentieth century; yet it is incontrovertible, I think, that in SOME ways the primitive peoples, with their swift subconscious intuitions and their minds unclouded by mere book knowledge, perceived truths to which we moderns are blind. Like the animals they arrived at their perceptions without (individual) brain effort; they knew things without thinking. When they did THINK of course they went wrong. Their budding science easily went astray. Religion with them had as yet taken no definite shape; science was equally protoplasmic; and all they had was a queer jumble of the two in the form of Magic. When at a later time Science gradually defined its outlook and its observations, and Religion, from being a vague subconscious feeling, took clear shape in the form of gods and creeds, then mankind gradually emerged into the stage of evolution IN WHICH WE NOW ARE. OUR scientific laws and doctrines are of course only temporary formulae, and so also are the gods and the creeds of our own and other religions; but these things, with their set and angular outlines, have served in the past and will serve in the future as stepping-stones towards another kind of knowledge of which at present we only dream, and will lead us on to a renewed power of perception which again will not be the laborious product of thought but a direct and instantaneous intuition like that of the animals—and the angels.

To return to our Tree. Though primitive man did not speculate in modern style on these things, I yet have no reasonable doubt that he felt (and FEELS, in those cases where we can still trace the workings of his mind) his essential relationship to the creatures of the forest more intimately, if less analytically, than we do to-day. If the animals with all their wonderful gifts are (as we readily admit) a veritable part of Nature—so that they live and move and have their being more or less submerged in the spirit of the great world around them—then Man, when he first began to differentiate himself from them, must for a long time have remained in this SUBconscious unity, becoming only distinctly CONSCIOUS of it when he was already beginning to lose it. That early dawn of distinct consciousness corresponded to the period of belief in Magic. In that first mystic illumination almost every object was invested with a halo of mystery or terror or adoration. Things were either tabu, in which case they were dangerous, and often not to be touched or even looked upon—or they were overflowing with magic grace and influence, in which case they were holy, and any rite which released their influence was also holy. William Blake, that modern prophetic child, beheld a Tree full of angels; the Central Australian native believes bushes to be the abode of spirits which leap into the bodies of passing women and are the cause of the conception of children; Moses saw in the desert a bush (perhaps the mimosa) like a flame of fire, with Jehovah dwelling in the midst of it, and he put off his shoes for he felt that the place was holy; Osiris was at times regarded as a Tree-spirit; and in inscriptions is referred to as “the solitary one in the acacia”—which reminds us curiously of the “burning bush.” The same is true of others of the gods; in the old Norse mythology Ygdrasil was the great branching World-Ash, abode of the soul of the universe; the Peepul or Bo-tree in India is very sacred and must on no account be cut down, seeing that gods and spirits dwell among its branches. It is of the nature of an Aspen, and of little or no practical use, but so holy that the poorest peasant will not disturb it. The Burmese believe the things of nature, but especially the trees, to be the abode of spirits. “To the Burman of to-day, not less than to the Greek of long ago, all nature is alive. The forest and the river and the mountains are full of spirits, whom the Burmans call Nats. There are all kinds of Nats, good and bad, great and little, male and female, now living round about us. Some of them live in the trees, especially in the huge figtree that shades half-an-acre without the village; or among the fern-like fronds of the tamarind.”

There are also in India and elsewhere popular rites of MARRIAGE of women (and men) to Trees; which suggest that trees were regarded as very near akin to human beings! The Golden Bough mentions many of these, including the idea that some trees are male and others female. The well-known Assyrian emblem of a Pine cone being presented by a priest to a Palm-tree is supposed by E. B. Tylor to symbolize fertilization—the Pine cone being masculine and the Palm feminine. The ceremony of the god Krishna's marriage to a Basil plant is still celebrated in India down to the present day; and certain trees are clasped and hugged by pregnant women—the idea no doubt being that they bestow fertility on those who embrace them. In other cases apparently it is the trees which are benefited, since it is said that men sometimes go naked into the Clove plantations at night in order by a sort of sexual intercourse to fertilize them.

One might go on multiplying examples in this direction quite indefinitely. There is no end to them. They all indicate—what was instinctively felt by early man, and is perfectly obvious to all to-day who are not blinded by “civilization” (and Herbert Spencer!) that the world outside us is really most deeply akin to ourselves, that it is not dead and senseless but intensely alive and instinct with feeling and intelligence resembling our own. It is this perception, this conviction of our essential unity with the whole of creation, which lay from the first at the base of all Religion; yet at first, as I have said, was hardly a conscious perception. Only later, when it gradually became more conscious, did it evolve itself into the definite forms of the gods and the creeds—but of that process I will speak more in detail presently.

The Tree therefore was a most intimate presence to the Man. It grew in the very midst of his Garden of Eden. It had a magical virtue, which his tentative science could only explain by chance analogies and assimilations. Attractive and beloved and worshipped by reason of its many gifts to mankind—its grateful shelter, its abounding fruits, its timber, and other invaluable products—why should it not become the natural emblem of the female, to whom through sex man’s worship is ever drawn? If the Snake has an unmistakable resemblance to the male organ in its active state, the foliage of the tree or bush is equally remindful of the female. What more clear than that the conjunction of Tree and Serpent is the fulfilment in nature of that sex-mystery which is so potent in the life of man and the animals? and that the magic ritual most obviously fitted to induce fertility in the tribe or the herds (or even the crops) is to set up an image of the Tree and the Serpent combined, and for all the tribe-folk in common to worship and pay it reverence. In the Bible with more or less veiled sexual significance we have this combination in the Eden-garden, and again in the brazen Serpent and Pole which Moses set up in the wilderness (as a cure for the fiery serpents of lust); illustrations of the same are said to be found in the temples of Egypt and of South India, and even in the ancient temples of Central America. In the myth of Hercules the golden apples of the Hesperides garden are guarded by a dragon. The Etruscans, the Persians and the Babylonians had also legends of the Fall of man through a serpent tempting him to taste of the fruit of a holy Tree. And De Gubernatis, pointing out the phallic meaning of these stories, says “the legends concerning the tree of golden apples or figs which yields honey or ambrosia, guarded by dragons, in which the life, the fortune, the glory, the strength and the riches of the hero have their beginning, are numerous among every people of Aryan origin: in India, Persia, Russia, Poland, Sweden, Germany, Greece and Italy.”

Thus we see the natural-magic tendency of the human mind asserting itself. To some of us indeed this tendency is even greater in the case of the Snake than in that of the Tree. W. H. Hudson, in *Far Away and Long Ago*, speaks of “that sense of something supernatural in the serpent, which appears to have been universal among peoples in a primitive state of culture, and still survives in some barbarous or semi-barbarous countries.” The fascination of the Snake—the fascination of its mysteriously gliding movement, of its vivid energy, its glittering eye, its intensity of life, combined with its fatal dart of Death—is a thing felt even more by women than by men—and for a reason

(from what we have already said) not far to seek. It was the Woman who in the story of the Fall was the first to listen to its suggestions. No wonder that, as Professor Murray says, the Greeks worshiped a gigantic snake (Meilichios) the lord of Death and Life, with ceremonies of appeasement, and sacrifices, long before they arrived at the worship of Zeus and the Olympian gods.

Or let us take the example of an Ear of Corn. Some people wonder—hearing nowadays that the folk of old used to worship a Corn-spirit or Corn-god—wonder that any human beings could have been so foolish. But probably the good people who wonder thus have never REALLY LOOKED (with their town-dazed eyes) at a growing spike of wheat. Of all the wonderful things in Nature I hardly know any that thrills one more with a sense of wizardry than just this very thing—to observe, each year, this disclosure of the Ear within the Blade—first a swelling of the sheath, then a transparency and a whitey-green face within a hooded shroud, and then the perfect spike of grain disengaging itself and spiring upward towards the sky—”the resurrection of the wheat with pale visage appearing out of the ground.”

If this spectacle amazes one to-day, what emotions must it not have aroused in the breasts of the earlier folk, whose outlook on the world was so much more direct than ours—more ‘animistic’ if you like! What wonderment, what gratitude, what deliverance from fear (of starvation), what certainty that this being who had been ruthlessly cut down and sacrificed last year for human food had indeed arisen again as a savior of men, what readiness to make some human sacrifice in return, both as an acknowledgment of the debt, and as a gift of something which would no doubt be graciously accepted!—(for was it not well known that where blood had been spilt on the ground the future crop was so much more generous?)—what readiness to adopt some magic ritual likely to propitiate the unseen power—even though the outline and form of the latter were vague and uncertain in the extreme! Dr. Frazer, speaking of the Egyptian Osiris as one out of many corn-gods of the above character, says: “The primitive conception of him as the corn-god comes clearly out in the festival of his death and resurrection, which was celebrated the month of Athyr. That festival appears to have been essentially a festival of sowing, which properly fell at the time when the husbandman actually committed the seed to the earth. On that occasion an effigy of the corn-god, moulded of earth and corn, was buried with funeral rites in the ground in order that, dying there, he might come to life again with the new crops. The ceremony was in fact a charm to ensure the growth of the corn by sympathetic magic, and we may conjecture that as such it was practised in a simple form by every Egyptian farmer on his fields long before it was adopted and transfigured by the priests in the stately ritual of the temple.”

The magic in this case was of a gentle description; the clay image of Osiris sprouting all over with the young green blade was pathetically poetic; but, as has been suggested, bloodthirsty ceremonies were also common enough. Human sacrifices, it is said, had at one time been offered at the grave of Osiris. We bear that the Indians in Ecuador used to sacrifice men’s hearts and pour out human blood on their fields when

they sowed them; the Pawnee Indians used a human victim the same, allowing his blood to drop on the seed-corn. It is said that in Mexico girls were sacrificed, and that the Mexicans would sometimes GRIND their (male) victim, like corn, between two stones. ("I'll grind his bones to make me bread.") Among the Khonds of East India—who were particularly given to this kind of ritual—the very TEARS of the sufferer were an incitement to more cruelties, for tears of course were magic for Rain.

And so on. We have referred to the Bull many times, both in his astronomical aspect as pioneer of the Spring-Sun, and in his more direct role as plougher of the fields, and provider of food from his own body. "The tremendous mana of the wild bull," says Gilbert Murray, "occupies almost half the stage of pre-Olympic ritual." Even to us there is something mesmeric and overwhelming in the sense of this animal's glory of strength and fury and sexual power. No wonder the primitives worshiped him, or that they devised rituals which should convey his power and vitality by mere contact, or that in sacramental feasts they ate his flesh and drank his blood as a magic symbol and means of salvation.

VI. MAGICIANS, KINGS AND GODS

It is perhaps necessary, at the commencement of this chapter, to say a few more words about the nature and origin of the belief in Magic. Magic represented on one side, and clearly enough, the beginnings of Religion—i.e. the instinctive sense of Man's inner continuity with the world around him, TAKING SHAPE: a fanciful shape it is true, but with very real reaction on his practical life and feelings. On the other side it represented the beginnings of Science. It was his first attempt not merely to FEEL but to UNDERSTAND the mystery of things.

Inevitably these first efforts to understand were very puerile, very superficial. As E. B. Tylor says of primitive folk in general, "they mistook an imaginary for a real connection." And he instances the case of the inhabitants of the City of Ephesus, who laid down a rope, seven furlongs in length, from the City to the temple of Artemis, in order to place the former under the protection of the latter! WE should lay down a telephone wire, and consider that we established a much more efficient connection; but in the beginning, and quite naturally, men, like children, rely on surface associations. Among the Dyaks of Borneo when the men are away fighting, the WOMEN must use a sort of telepathic magic in order to safeguard them—that is, they must themselves rise early and keep awake all day (lest darkness and sleep should give advantage to the enemy); they must not OIL their hair (lest their husbands should make any SLIPS); they must eat sparingly and put aside rice at every meal (so that the men may not want for food). And so on. Similar superstitions are common. But they gradually lead to a little thought, and then to a little more, and so to the discovery of actual and provable influences. Perhaps one day the cord connecting the temple with Ephesus was drawn TIGHT and it was found that messages could be, by tapping, transmitted along it. That way lay the discovery of a fact. In an age which worshiped fertility, whether in mankind or animals, TWINS were ever counted especially blest, and were credited with a magic power. (The Constellation of the Twins was thought peculiarly lucky.) Perhaps after a time it was discovered that twins sometimes run in families, and in such cases really do bring fertility with them. In cattle it is known nowadays that there are more twins of the female sex than of the male sex.

Observations of this kind were naturally made by the ablest members of the tribe—who were in all probability the medicine-men and wizards—and brought in consequence power into their hands. The road to power in fact—and especially was this the case in societies which had not yet developed wealth and property—lay through Magic. As far as magic represented early superstition and religion it laid hold of the HEARTS of men—their hopes and fears; as far as it represented science and the beginnings of actual knowledge, it inspired their minds with a sense of power, and gave form to their lives and customs. We have no reason to suppose that the early magicians and medicine-men were peculiarly wicked or bent on mere self-aggrandizement—any more than we have to think the same of the average country vicar or country doctor of to-day. They were merely men a trifle wiser or more instructed than their flocks. But though probably in most cases their original intentions were decent enough, they were not

proof against the temptations which the possession of power always brings, and as time went on they became liable to trade more and more upon this power for their own advancement. In the matter of Religion the history of the Christian priesthood through the centuries shows sufficiently to what misuse such power can be put; and in the matter of Science it is a warning to us of the dangers attending the formation of a scientific priesthood, such as we see growing up around us to-day. In both cases—whether Science or Religion—vanity, personal ambition, lust of domination and a hundred other vices, unless corrected by a real devotion to the public good, may easily bring as many evils in their train as those they profess to cure.

The Medicine-man, or Wizard, or Magician, or Priest, slowly but necessarily gathered power into his hands, and there is much evidence to show that in the case of many tribes at any rate, it was HE who became ultimate chief and leader and laid the foundations of Kingship. The Basileus was always a sacred personality, and often united in himself as head of the clan the offices of chief in warfare and leader in priestly rites—like Agamemnon in Homer, or Saul or David in the Bible. As a magician he had influence over the fertility of the earth and, like the blameless king in the Odyssey, under his sway

“the dark earth beareth in season
Barley and wheat, and the trees are laden with fruitage, and alway
Yean unfailing the flocks, and the sea gives fish in abundance.”

As a magician too he was trusted for success in warfare; and Schoolcraft, in a passage quoted by Andrew Lang, says of the Dacotah Indians “the war-chief who leads the party to war is always one of these medicine-men.” This connection, however, by which the magician is transformed into the king has been abundantly studied, and need not be further dwelt upon here.

And what of the transformation of the king into a god—or of the Magician or Priest directly into the same? Perhaps in order to appreciate this, one must make a further digression.

For the early peoples there were, as it would appear, two main objects in life: (1) to promote fertility in cattle and crops, for food; and (2) to placate or ward off Death; and it seemed very obvious—even before any distinct figures of gods, or any idea of prayer, had arisen—to attain these objects by magic ritual. The rites of Baptism, of Initiation (or Confirmation) and the many ceremonies of a Second Birth, which we associate with fully-formed religions, did belong also to the age of Magic; and they all implied a belief in some kind of re-incarnation—in a life going forward continually and being renewed in birth again and again. It is curious that we find such a belief among the lowest savages even to-day. Dr. Frazer, speaking of the Central Australian tribes, says the belief is firmly rooted among them “that the human soul undergoes an endless series of re-incarnations—the living men and women of one generation being

nothing but the spirits of their ancestors come to life again, and destined themselves to be reborn in the persons of their descendants. During the interval between two re-incarnations the souls live in their nanja spots, or local totem-centres, which are always natural objects such as trees or rocks. Each totem-clan has a number of such totem-centres scattered over the country. There the souls of the dead men and women of the totem, but no others, congregate, and are born again in human form when a favorable opportunity presents itself."

And what the early people believed of the human spirit, they believed of the corn-spirits and the tree and vegetation spirits also. At the great Spring-ritual among the primitive Greeks "the tribe and the growing earth were renovated together: the earth arises afresh from her dead seeds, the tribe from its dead ancestors." And the whole process projects itself in the idea of a spirit of the year, who "in the first stage is living, then dies with each year, and thirdly rises again from the dead, raising the whole dead world with him. The Greeks called him in this stage 'The Third One' [Tritos Soter] or 'the Saviour'; and the renovation ceremonies were accompanied by a casting-off of the old year, the old garments, and everything that is polluted by the infection of death." Thus the multiplication of the crops and the renovation of the tribe, and at the same time the evasion and placation of death, were all assured by similar rites and befitting ceremonial magic.

In all these cases, and many others that I have not mentioned—of the magical worship of Bulls and Bears and Rams and Cats and Emus and Kangaroos, of Trees and Snakes, of Sun and Moon and Stars, and the spirit of the Corn in its yearly and miraculous resurrection out of the ground—there is still the same idea or moving inspiration, the sense mentioned in the foregoing chapter, the feeling (hardly yet conscious of its own meaning) of intimate relationship and unity with all this outer world, the instinctive conviction that the world can be swayed by the spirit of Man, if the man can only find the right ritual, the right word, the right spell, wherewith to move it. An aura of emotion surrounded everything—of terror, of tabu, of fascination, of desire. The world, to these people, was transparent with presences related to themselves; and though hunger and sex may have been the dominant and overwhelmingly practical needs of their life, yet their outlook on the world was essentially poetic and imaginative.

Moreover it will be seen that in this age of magic and the belief in spirits, though there was an intense sense of every thing being alive, the gods, in the more modern sense of the world, hardly existed—that is, there was no very clear vision, to these people, of supra-mundane beings, sitting apart and ordaining the affairs of earth, as it were from a distance. Doubtless this conception was slowly evolving, but it was only incipient. For the time being—though there might be orders and degrees of spirits (and of gods)—every such being was only conceived of, and could only be conceived of, as actually a part of Nature, dwelling in and interlaced with some phenomenon of Earth and Sky, and having no separate existence.

How was it then, it will be asked, that the belief in separate and separable gods and goddesses—each with his or her well-marked outline and character and function, like

the divinities of Greece, or of India, or of the Egyptian or Christian religions, ultimately arose? To this question Jane Harrison (in her *Themis* and other books) gives an ingenious answer, which as it chimes in with my own speculations (in the *Art of Creation* and elsewhere) I am inclined to adopt. It is that the figures of the supranatural gods arose from a process in the human mind similar to that which the photographer adopts when by photographing a number of faces on the same plate, and so superposing their images on one another, he produces a so-called "composite" photograph or image. Thus, in the photographic sphere, the portraits of a lot of members of the same family superposed upon one another may produce a composite image or ideal of that family type, or the portraits of a number of Aztecs or of a number of Apache Indians the ideals respectively of the Aztec or of the Apache types. And so in the mental sphere of each member of a tribe the many images of the well-known Warriors or Priests or wise and gracious Women of that tribe did inevitably combine at last to composite figures of gods and goddesses—on whom the enthusiasm and adoration of the tribe was concentrated. Miss Harrison has ingeniously suggested how the leading figures in the magic rituals of the past—being the figures on which all eyes would be concentrated; and whose importance would be imprinted on every mind—lent themselves to this process. The suffering Victim, bound and scourged and crucified, recurring year after year as the centre-figure of a thousand ritual processions, would at last be dramatized and idealized in the great race-consciousness into the form of a Suffering God—a Jesus Christ or a Dionysus or Osiris—dismembered or crucified for the salvation of mankind. The Priest or Medicine-Man—or rather the succession of Priests or Medicine-Men—whose figures would recur again and again as leaders and ordainers of the ceremonies, would be glorified at last into the composite-image of a God in whom were concentrated all magic powers. "Recent researches," says Gilbert Murray, "have shown us in abundance the early Greek medicine-chiefs making thunder and lightning and rain." Here is the germ of a Zeus or a Jupiter. The particular medicine-man may fail; that does not so much matter; he is only the individual representative of the glorified and composite being who exists in the mind of the tribe (just as a present-day King may be unworthy, but is surrounded all the same by the age-long glamour of Royalty). "The real xxx, tremendous, infallible, is somewhere far away, hidden in clouds perhaps, on the summit of some inaccessible mountain. If the mountain is once climbed the god will move to the upper sky. The medicine-chief meanwhile stays on earth, still influential. He has some connection with the great god more intimate than that of other men . . . he knows the rules for approaching him and making prayers to him." Thus did the Medicine-man, or Priest, or Magician (for these are but three names for one figure) represent one step in the evolution of the god.

And farther back still in the evolutionary process we may trace (as in chapter iv above) the divinization or deification of four-footed animals and birds and snakes and trees and the like, from the personification of the collective emotion of the tribe towards these creatures. For people whose chief food was bear-meat, for instance, whose totem was a bear, and who believed themselves descended from an ursine ancestor, there would grow up in the tribal mind an image surrounded by a halo of emotions—emotions of hungry desire, of reverence, fear, gratitude and so forth—an image of a

divine Bear in whom they lived and moved and had their being. For another tribe or group in whose yearly ritual a Bull or a Lamb or a Kangaroo played a leading part there would in the same way spring tip the image of a holy bull, a divine lamb, or a sacred kangaroo. Another group again might come to worship a Serpent as its presiding genius, or a particular kind of Tree, simply because these objects were and had been for centuries prominent factors in its yearly and seasonal Magic. As Reinach and others suggest, it was the Taboo (bred by Fear) which by first forbidding contact with the totem-animal or priest or magician-chief gradually invested him with Awe and Divinity.

According to this theory the god—the full-grown god in human shape, dwelling apart and beyond the earth—did not come first, but was a late and more finished product of evolution. He grew up by degrees and out of the preceding animal-worships and totem-systems. And this theory is much supported and corroborated by the fact that in a vast number of early cults the gods are represented by human figures with animal heads. The Egyptian religion was full of such divinities—the jackal-headed Anubis, the ram-headed Ammon, the bull-fronted Osiris, or Muth, queen of darkness, clad in a vulture's skin; Minos and the Minotaur in Crete; in Greece, Athena with an owl's head, or Herakles masked in the hide and jaws of a monstrous lion. What could be more obvious than that, following on the tribal worship of any totem-animal, the priest or medicine-man or actual king in leading the magic ritual should don the skin and head of that animal, and wear the same as a kind of mask—this partly in order to appear to the people as the true representative of the totem, and partly also in order to obtain from the skin the magic virtues and mana of the beast, which he could then duly impart to the crowd? Zeus, it must be remembered, wears the aegis, or goat-skin—said to be the hide of the goat Amaltheia who suckled him in his infancy; there are a number of legends which connected the Arcadian Artemis with the worship of the bear, Apollo with the wolf, and so forth. And, most curious as showing similarity of rites between the Old and New Worlds, there are found plenty of examples of the wearing of beast-masks in religious processions among the native tribes of both North and South America. In the Atlas of Spix and Martius (who travelled together in the Amazonian forests about 1820) there is an understanding and characteristic picture of the men (and some women) of the tribe of the Tecunas moving in procession through the woods mostly naked, except for wearing animal heads and masks—the masks representing Cranes of various kinds, Ducks, the Opossum, the Jaguar, the Parrot, etc., probably symbolic of their respective clans.

By some such process as this, it may fairly be supposed, the forms of the Gods were slowly exhaled from the actual figures of men and women, of youths and girls, who year after year took part in the ancient rituals. Just as the Queen of the May or Father Christmas with us are idealized forms derived from the many happy maidens or white-bearded old men who took leading parts in the May or December mummings and thus gained their apotheosis in our literature and tradition—so doubtless Zeus with his thunderbolts and arrows of lightning is the idealization into Heaven of the Priestly rain-maker and storm-controller; Ares the god of War, the similar idealization of the leading

warrior in the ritual war-dance preceding an attack on a neighboring tribe; and Mercury of the foot-running Messenger whose swiftness in those days (devoid of steam or electricity) was so precious a tribal possession.

And here it must be remembered that this explanation of the genesis of the gods only applies to the SHAPES and FIGURES of the various deities. It does not apply to the genesis of the widespread belief in spirits or a Great Spirit generally; that, as I think will become clear, has quite another source. Some people have jeered at the 'animistic' or 'anthropomorphic' tendency of primitive man in his contemplation of the forces of Nature or his imaginations of religion and the gods. With a kind of superior pity they speak of "the poor Indian whose untutored mind sees God in clouds and hears him in the wind." But I must confess that to me the "poor Indian" seems on the whole to show more good sense than his critics, and to have aimed his rude arrows at the philosophic mark more successfully than a vast number of his learned and scientific successors. A consideration of what we have said above would show that early people felt their unity with Nature so deeply and intimately that—like the animals themselves—they did not think consciously or theorize about it. It was just their life to be—like the beasts of the field and the trees of the forest—a part of the whole flux of things, non-differentiated so to speak. What more natural or indeed more logically correct than for them to assume (when they first began to think or differentiate themselves) that these other creatures, these birds, beasts and plants, and even the sun and moon, were of the same blood as themselves, their first cousins, so to speak, and having the same interior nature? What more reasonable (if indeed they credited THEMSELVES with having some kind of soul or spirit) than to credit these other creatures with a similar soul or spirit? Im Thurn, speaking of the Guiana Indians, says that for them "the whole world swarms with beings." Surely this could not be taken to indicate an untutored mind—unless indeed a mind untutored in the nonsense of the Schools—but rather a very directly perceptive mind. And again what more reasonable (seeing that these people themselves were in the animal stage of evolution) than that they should pay great reverence to some ideal animal—first cousin or ancestor—who played an important part in their tribal existence, and make of this animal a totem emblem and a symbol of their common life?

And, further still, what more natural than that when the tribe passed to some degree beyond the animal stage and began to realize a life more intelligent and emotional—more specially human in fact—than that of the beasts of the field, that it should then in its rituals and ceremonies throw off the beast-mask and pay reverence to the interior and more human spirit. Rising to a more enlightened consciousness of its own intimate quality, and still deeply penetrated with the sense of its kinship to external nature, it would inevitably and perfectly logically credit the latter with an inner life and intelligence, more distinctly human than before. Its religion in fact would become MORE 'anthropomorphic' instead of less so; and one sees that this is a process that is inevitable; and inevitable notwithstanding a certain parenthesis in the process, due to obvious elements in our 'Civilization' and to the temporary and fallacious domination of a leaden-eyed so-called 'Science.' According to this view the true evolution of Religion

and Man's outlook on the world has proceeded not by the denial by man of his unity with the world, but by his seeing and understanding that unity more deeply. And the more deeply he understands himself the more certainly he will recognize in the external world a Being or beings resembling himself.

W. H. Hudson—whose mind is certainly not of a quality to be jeered at—speaks of Animism as “the projection of ourselves into nature: the sense and apprehension of an intelligence like our own, but more powerful, in all visible things”; and continues, “old as I am this same primitive faculty which manifested itself in my early boyhood, still persists, and in those early years was so powerful that I am almost afraid to say how deeply I was moved by it.” Nor will it be quite forgotten that Shelley once said:—

The moveless pillar of a mountain's weight
Is active living spirit. Every grain
Is sentient both in unity and part,
And the minutest atom comprehends
A world of loves and hatreds.

The tendency to animism and later to anthropomorphism is I say inevitable, and perfectly logical. But the great value of the work done by some of those investigators whom I have quoted has been to show that among quite primitive people (whose interior life and ‘soul-sense’ was only very feeble) their projections of intelligence into Nature were correspondingly feeble. The reflections of themselves projected into the world beyond could not reach the stature of eternal ‘gods,’ but were rather of the quality of ephemeral phantoms and ghosts; and the ceremonials and creeds of that period are consequently more properly described as, Magic than as Religion. There have indeed been great controversies as to whether there has or has not been, in the course of religious evolution, a PRE-animistic stage. Probably of course human evolution in this matter must have been perfectly continuous from stages presenting the very feeblest or an absolutely deficient animistic sense to the very highest manifestations of anthropomorphism; but as there is a good deal of evidence to show that ANIMALS (notably dogs and horses) see ghosts, the inquiry ought certainly to be enlarged so far as to include the pre-human species. Anyhow it must be remembered that the question is one of CONSCIOUSNESS—that is, of how far and to what degree consciousness of self has been developed in the animal or the primitive man or the civilized man, and therefore how far and to what degree the animal or human creature has credited the outside world with a similar consciousness. It is not a question of whether there IS an inner life and SUB-consciousness common to all these creatures of the earth and sky, because that, I take it, is a fact beyond question; they all emerge or have emerged from the same matrix, and are rooted in identity; but it is a question of how far they are AWARE of this, and how far by separation (which is the genius of evolution) each individual creature has become conscious of the interior nature both of itself and of the other creatures AND of the great whole which includes them all.

Finally, and to avoid misunderstanding, let me say that Anthropomorphism, in man's conception of the gods, is itself of course only a stage and destined to pass away. In so far, that is, as the term indicates a belief in divine beings corresponding to our PRESENT conception of ourselves—that is as separate personalities having each a separate and limited character and function, and animated by the separatist motives of ambition, possession, power, vain, glory, superiority, patronage, self-greed, self-satisfaction, etc.—in so far as anthropomorphism is the expression of that kind of belief it is of course destined, with the illusion from which it springs, to pass away. When man arrives at the final consciousness in which the idea of such a self, superior or inferior or in any way antagonistic to others, ceases to operate, then he will return to his first and primal condition, and will cease to need ANY special religion or gods, knowing himself and all his fellows to be divine and the origin and perfect fruition of all.

VII. RITES OF EXPIATION AND REDEMPTION

There is a passage in Richard Jefferies' imperishably beautiful book *The Story of my Heart*—a passage well known to all lovers of that prose-poet—in which he figures himself standing “in front of the Royal Exchange where the wide pavement reaches out like a promontory,” and pondering on the vast crowd and the mystery of life. “Is there any theory, philosophy, or creed,” he says, “is there any system of culture, any formulated method, able to meet and satisfy each separate item of this agitated pool of human life? By which they may be guided, by which they may hope, by which look forward? Not a mere illusion of the craving heart—something real, as real as the solid walls of fact against which, like seaweed, they are dashed; something to give each separate personality sunshine and a flower in its own existence now; something to shape this million-handed labor to an end and outcome that will leave more sunshine and more flowers to those who must succeed? Something real now, and not in the spirit-land; in this hour now, as I stand and the sun burns. . . . Full well aware that all has failed, yet, side by side with the sadness of that knowledge, there lives on in me an unquenchable belief, thought burning like the sun, that there is yet something to be found.... It must be dragged forth by the might of thought from the immense forces of the universe.”

In answer to this passage we may say “No,—a thousand times No! there is no theory, philosophy, creed, system or formulated method which will meet or ever satisfy the demand of each separate item of the human whirlpool.” And happy are we to know there is no such thing! How terrible if one of these bloodless ‘systems’ which strew the history of religion and philosophy and the political and social paths of human endeavor HAD been found absolutely correct and universally applicable—so that every human being would be compelled to pass through its machine-like maw, every personality to be crushed under its Juggernath wheels! No, thank Heaven! there is no theory or creed or system; and yet there is something—as Jefferies prophetically felt and with a great longing desired—that CAN satisfy; and that, the root of all religion, has been hinted at in the last chapter. It is the CONSCIOUSNESS of the world-life burning, blazing, deep down within us: it is the Soul's intuition of its roots in Omnipresence and Eternity.

The gods and the creeds of the past, as shown in the last chapter—whatever they may have been, animistic or anthropomorphic or transcendental, whether grossly brutish or serenely ideal and abstract—are essentially projections of the human mind; and no doubt those who are anxious to discredit the religious impulse generally will catch at this, saying “Yes, they are mere forms and phantoms of the mind, ephemeral dreams, projected on the background of Nature, and having no real substance or solid value. The history of Religion (they will say) is a history of delusion and illusion; why waste time over it? These divine grizzly Bears or Aesculapian Snakes, these cat-faced Pashts, this Isis, queen of heaven, and Astarte and Baal and Indra and Agni and Kali and Demeter and the Virgin Mary and Apollo and Jesus Christ and Satan and the Holy Ghost, are only shadows cast outwards onto a screen; the constitution of the human mind makes them all tend to be anthropomorphic; but that is all; they each and all

inevitably pass away. Why waste time over them?"

And this is in a sense a perfectly fair way of looking at the matter. These gods and creeds ARE only projections of the human mind. But all the same it misses, does this view, the essential fact. It misses the fact that there is no shadow without a fire, that the very existence of a shadow argues a light somewhere (though we may not directly see it) as well as the existence of a solid form which intercepts that light. Deep, deep in the human mind there is that burning blazing light of the world-consciousness—so deep indeed that the vast majority of individuals are hardly aware of its existence. Their gaze turned outwards is held and riveted by the gigantic figures and processions passing across their sky; they are unaware that the latter are only shadows—silhouettes of the forms inhabiting their own minds. The vast majority of people have never observed their own minds; their own mental forms. They have only observed the reflections cast by these. Thus it may be said, in this matter, that there are three degrees of reality. There are the mere shadows—the least real and most evanescent; there are the actual mental outlines of humanity (and of the individual), much more real, but themselves also of course slowly changing; and most real of all, and permanent, there is the light “which lighteth every man that cometh into the world”—the glorious light of the world-consciousness. Of this last it may be said that it never changes. Every thing is known to it—even the very IMPEDIMENTS to its shining. But as it is from the impediments to the shining of a light that shadows are cast, so we now may understand that the things of this world and of humanity, though real in their degree, have chiefly a kind of negative value; they are opaquenesses, clouds, materialisms, ignorances, and the inner light falling upon them gradually reveals their negative character and gradually dissolves them away till they are lost in the extreme and eternal Splendor. I think Jefferies, when he asked that question with which I have begun this chapter, was in some sense subconsciously, if not quite consciously, aware of the answer. His frequent references to the burning blazing sun throughout *The Story of the Heart* seem to be an indication of his real deep-down attitude of mind.

The shadow-figures of the creeds and theogonies pass away truly like ephemeral dreams; but to say that time spent in their study is wasted, is a mistake, for they have value as being indications of things much more real than themselves, namely, of the stages of evolution of the human mind. The fact that a certain god-figure, however grotesque and queer, or a certain creed, however childish, cruel, and illogical, held sway for a considerable time over the hearts of men in any corner or continent of the world is good evidence that it represented a real formative urge at the time in the hearts of those good people, and a definite stage in their evolution and the evolution of humanity. Certainly it was destined to pass away, but it was a step, and a necessary step in the great process; and certainly it was opaque and brutish, but it is through the opaque things of the world, and not through the transparent, that we become aware of the light.

It may be worth while to give instances of how some early rituals and creeds, in themselves apparently barbarous or preposterous, were really the indications of important moral and social conceptions evolving in the heart of man. Let us take, first, the religious customs connected with the ideas of Sacrifice and of Sin, of which such innumerable examples are now to be found in the modern books on Anthropology. If we assume, as I have done more than once, that the earliest state of Man was one in which he did not consciously separate himself from the world, animate and inanimate, which surrounded him, then (as I have also said) it was perfectly natural for him to take some animal which bulked large on his horizon—some food-animal for instance—and to pay respect to it as the benefactor of his tribe, its far-back ancestor and totem-symbol; or, seeing the boundless blessing of the cornfields, to believe in some kind of spirit of the corn (not exactly a god but rather a magical ghost) which, reincarnated every year, sprang up to save mankind from famine. But then no sooner had he done this than he was bound to perceive that in cutting down the corn or in eating his totem-bear or kangaroo he was slaying his own best self and benefactor. In that instant the consciousness of DISUNITY, the sense of sin in some undefined yet no less disturbing and alarming form would come in. If, before, his ritual magic had been concentrated on the simple purpose of multiplying the animal or, vegetable forms of his food, now in addition his magical endeavor would be turned to averting the just wrath of the spirits who animated these forms—just indeed, for the rudest savage would perceive the wrong done and the probability of its retribution. Clearly the wrong done could only be expiated by an equivalent sacrifice of some kind on the part of the man, or the tribe—that is by the offering to the totem-animal or to the corn-spirit of some victim whom these nature powers in their turn could feed upon and assimilate. In this way the nature-powers would be appeased, the sense of unity would be restored, and the first At-one-ment effected.

It is hardly necessary to recite in any detail the cruel and hideous sacrifices which have been perpetrated in this sense all over the world, sometimes in appeasement of a wrong committed or supposed to have been committed by the tribe or some member of it, sometimes in placation or for the averting of death, or defeat, or plague, sometimes merely in fulfilment of some long-standing custom of forgotten origin—the flayings and floggings and burnings and crucifixions of victims without end, carried out in all deliberation and solemnity of established ritual. I have mentioned some cases connected with the sowing of the corn. The Bible is full of such things, from the intended sacrifice of Isaac by his father Abraham, to the actual crucifixion of Jesus by the Jews. The first-born sons were claimed by a god who called himself “jealous” and were only to be redeemed by a substitute. Of the Canaanites it was said that “even their daughters they have BURNT in the fire to their gods”; and of the King of Moab, that when he saw his army in danger of defeat, “he took his eldest son that should have reigned in his stead and offered him for a burnt-offering on the wall!” Dr. Frazer mentions the similar case of the Carthaginians (about B.C. 300) sacrificing two hundred children of good family as a propitiation to Baal and to save their beloved city from the assaults of the Sicilian tyrant Agathocles. And even so we hear that on that occasion three hundred more young folk VOLUNTEERED to die for the fatherland.

The awful sacrifices made by the Aztecs in Mexico to their gods Huitzilopochtli, Texcatlipoca, and others are described in much detail by Sahagun, the Spanish missionary of the sixteenth century. The victims were mostly prisoners of war or young children; they were numbered by thousands. In one case Sahagun describes the huge idol or figure of the god as largely plated with gold and holding his hands palm upward and in a downward sloping position over a cauldron or furnace placed below. The children, who had previously been borne in triumphal state on litters over the crowd and decorated with every ornamental device of feathers and flowers and wings, were placed one by one on the vast hands and ROLLED DOWN into the flames—as if the god were himself offering them. As the procession approached the temple, the members of it wept and danced and sang, and here again the abundance of tears was taken for a good augury of rain.

Bernal Diaz describes how he saw one of these monstrous figures—that of Huitzilopochtli, the god of war, all inlaid with gold and precious stones; and beside it were “braziers, wherein burned the hearts of three Indians, torn from their bodies that very day, and the smoke of them and the savor of incense were the sacrifice.”

Sahagun again (in Book II, ch. 5) gives a long account of the sacrifice of a perfect youth at Easter-time—which date Sahagun connects with the Christian festival of the Resurrection. For a whole year the youth had been held in honor and adored by the people as the very image of the god (Tetzcatlipoca) to whom he was to be sacrificed. Every luxury and fulfilment of his last wish (including such four courtesans as he desired) had been granted him. At the last and on the fatal day, leaving his companions and his worshipers behind, he slowly ascended the Temple staircase; stripping on each step the ornaments from his body; and breaking and casting away his flutes and other musical instruments; till, reaching the summit, he was stretched, curved on his back, and belly upwards, over the altar stone, while the priest with obsidian knife cut his breast open and, snatching the heart out, held it up, yet beating, as an offering to the Sun. In the meantime, and while the heart still lived, his successor for the next year was chosen.

In Book II, ch. 7 of the same work Sahagun describes the similar offering of a woman to a goddess. In both cases (he explains) of young man or young woman, the victims were richly adorned in the guise of the god or goddess to whom they were offered, and at the same time great largesse of food was distributed to all who needed. [Here we see the connection in the general mind between the gift of food (by the gods) and the sacrifice of precious blood (by the people).] More than once Sahagun mentions that the victims in these Mexican ceremonials not infrequently offered THEMSELVES as a voluntary sacrifice; and Prescott says that the offering of one's life to the gods was “sometimes voluntarily embraced, as a most glorious death opening a sure passage into Paradise.”

Dr. Frazer describes the far-back Babylonian festival of the Sacaea in which “a prisoner, condemned to death, was dressed in the king’s robes, seated on the king’s throne, allowed to issue whatever commands he pleased, to eat, drink and enjoy himself, and even to lie with the king’s concubines.” But at the end of the five days he was stripped of his royal robes, scourged, and hanged or impaled. It is certainly astonishing to find customs so similar prevailing among peoples so far removed in space and time as the Aztecs of the sixteenth century A.D. and the Babylonians perhaps of the sixteenth century B.C. But we know that this subject of the yearly sacrifice of a victim attired as a king or god is one that Dr. Frazer has especially made his own, and for further information on it his classic work should be consulted.

Andrew Lang also, with regard to the Aztecs, quotes largely from Sahagun, and summarizes his conclusions in the following passage: “The general theory of worship was the adoration of a deity, first by innumerable human sacrifices, next by the special sacrifice of a MAN for the male gods, of a WOMAN for each goddess. The latter victims were regarded as the living images or incarnations of the divinities in, each case; for no system of worship carried farther the identification of the god with the sacrifice [? victim], and of both with the officiating priest. The connection was emphasized by the priests wearing the newly-flayed skins of the victims—just as in Greece, Egypt and Assyria, the fawn-skin or bull-hide or goat-skin or fish-skin of the victims is worn by the celebrants. Finally, an image of the god was made out of paste, and this was divided into morsels and eaten in a hideous sacrament by those who communicated.”

Revolted as this whole picture is, it represents as we know a mere thumbnail sketch of the awful practices of human sacrifice all over the world. We hold up our hands in horror at the thought of Huitzilopochtli dropping children from his fingers into the flames, but we have to remember that our own most Christian Saint Augustine was content to describe unbaptized infants as crawling for ever about the floor of Hell! What sort of god, we may ask, did Augustine worship? The Being who could condemn children to such a fate was certainly no better than the Mexican Idol.

And yet Augustine was a great and noble man, with some by no means unworthy conceptions of the greatness of his God. In the same way the Aztecs were in many respects a refined and artistic people, and their religion was not all superstition and bloodshed. Prescott says of them that they believed in a supreme Creator and Lord “omnipresent, knowing all thoughts, giving all gifts, without whom Man is as nothing—invisible, incorporeal, one God, of perfect perfection and purity, under whose wings we find repose and a sure defence.” How can we reconcile St. Augustine with his own devilish creed, or the religious belief of the Aztecs with their unspeakable cruelties? Perhaps we can only reconcile them by remembering out of what depths of barbarism and what nightmares of haunting Fear, man has slowly emerged—and is even now only slowly emerging; by remembering also that the ancient ceremonies and rituals of Magic and Fear remained on and were cultivated by the multitude in each nation long after the bolder and nobler spirits had attained to breathe a purer air; by remembering that even to the present day in each individual the Old and the New are for a long peri-

od thus intricately intertangled. It is hard to believe that the practice of human and animal sacrifice (with whatever revolting details) should have been cultivated by nine-tenths of the human race over the globe out of sheer perversity and without some reason which at any rate to the perpetrators themselves appeared commanding and convincing. To-day [1918] we are witnessing in the Great European War a carnival of human slaughter which in magnitude and barbarity eclipses in one stroke all the accumulated ceremonial sacrifices of historical ages; and when we ask the why and wherefore of this horrid spectacle we are told, apparently in all sincerity, and by both the parties engaged, of the noble objects and commanding moralities which inspire and compel it. We can hardly, in this last case, disbelieve altogether in the genuineness of the plea, so why should we do so in the former case? In both cases we perceive that underneath the surface pretexts and moralities Fear is and was the great urging and commanding force.

The truth is that Sin and Sacrifice represent—if you once allow for the overwhelming sway of fear—perfectly reasonable views of human conduct, adopted instinctively by mankind since the earliest times. If in a moment of danger or an access of selfish greed you deserted your brother tribesman or took a mean advantage of him, you ‘sinned’ against him; and naturally you expiated the sin by an equivalent sacrifice of some kind made to the one you had wronged. Such an idea and such a practice were the very foundation of social life and human morality, and must have sprung up as soon as ever, in the course of evolution, man became CAPABLE of differentiating himself from his fellows and regarding his own conduct as that of a ‘separate self.’ It was in the very conception of a separate self that ‘sin’ and disunity first began; and it was by ‘sacrifice’ that unity and harmony were restored, appeasement and atonement effected.

But in those earliest times, as I have already indicated more than once, man felt himself intimately related not only to his brother tribesman, but to the animals and to general Nature. It was not so much that he THOUGHT thus as that he never thought OTHERWISE! He FELT subconsciously that he was a part of all this outer world. And so he adopted for his totems or presiding spirits every possible animal, as we have seen, and all sorts of nature-phenomena, such as rain and fire and water and clouds, and sun, moon and stars—which WE consider quite senseless and inanimate. Towards these apparently senseless things therefore he felt the same compunction as I have described him feeling towards his brother tribesmen. He could sin against them too. He could sin against his totem-animal by eating it; he could sin against his ‘brother the ox’ by consuming its strength in the labor of the plough; he could sin against the corn by cutting it down and grinding it into flour, or against the precious and beautiful pine-tree by laying his axe to its roots and converting it into mere timber for his house. Further still, no doubt he could sin against elemental nature. This might be more difficult to be certain of, but when the signs of elemental displeasure were not to be mistaken—when the rain withheld itself for months, or the storms and lightning dealt death and destruction, when the crops failed or evil plagues afflicted mankind—then there could be little uncertainty that he had sinned; and Fear, which had haunted him like a demon from

the first day when he became conscious of his separation from his fellows and from Nature, stood over him and urged to dreadful propitiations.

In all these cases some sacrifice in reparation was the obvious thing. We have seen that to atone for the cutting-down of the corn a human victim would often be slaughtered. The corn-spirit clearly approved of this, for wherever the blood and remains of the victim were strewn the corn always sprang up more plentifully. The tribe or human group made reparation thus to the corn; the corn-spirit signified approval. The 'sin' was expiated and harmony restored. Sometimes the sacrifice was voluntarily offered by a tribesman; sometimes it was enforced, by lot or otherwise; sometimes the victim was a slave, or a captive enemy; sometimes even an animal. All that did not so much matter. The main thing was that the formal expiation had been carried out, and the wrath of the spirits averted.

It is known that tribes whose chief food-animal was the bear felt it necessary to kill and eat a bear occasionally; but they could not do this without a sense of guilt, and some fear of vengeance from the great Bear-spirit. So they ate the slain bear at a communal feast in which the tribesmen shared the guilt and celebrated their community with their totem and with each other. And since they could not make any reparation directly to the slain animal itself AFTER its death, they made their reparation BEFORE, bringing all sorts of presents and food to it for a long anterior period, and paying every kind of worship and respect to it. The same with the bull and the ox. At the festival of the Bouphonia, in some of the cities of Greece as I have already mentioned, the actual bull sacrificed was the handsomest and most carefully nurtured that could be obtained; it was crowned with flowers and led in procession with every mark of reverence and worship. And when—as I have already pointed out—at the great Spring festival, instead of a bull or a goat or a ram, a HUMAN victim was immolated, it was a custom (which can be traced very widely over the world) to feed and indulge and honor the victim to the last degree for a WHOLE YEAR before the final ceremony, arraying him often as a king and placing a crown upon his head, by way of acknowledgment of the noble and necessary work he was doing for the general good.

What a touching and beautiful ceremony was that—belonging especially to the North of Syria, and lands where the pine is so beneficent and beloved a tree—the mourning ceremony of the death and burial of Attis! when a pine-tree, felled by the axe, was hollowed out, and in the hollow an image (often itself carved out of pinewood) of the young Attis was placed. Could any symbolism express more tenderly the idea that the glorious youth—who represented Spring, too soon slain by the rude tusk of Winter—was himself the very human soul of the pine-tree? At some earlier period, no doubt, a real youth had been sacrificed and his body bound within the pine; but now it was deemed sufficient for the maidens to sing their wild songs of lamentation; and for the priests and male enthusiasts to cut and gash themselves with knives, or to sacrifice (as they did) to the Earth-mother the precious blood offering of their virile organs—symbols of fertility in return for the promised and expected renewal of Nature and the crops in the coming Spring. For the ceremony, as we have already seen, did not end

with death and lamentation, but led on, perfectly naturally, after a day or two to a festival of resurrection, when it was discovered—just as in the case of Osiris—that the pine-tree coffin was empty, and the immortal life had flown. How strange the similarity and parallelism of all these things to the story of Jesus in the Gospels—the sacrifice of a life made in order to bring salvation to men and expiation of sins, the crowning of the victim, and arraying in royal attire, the scourging and the mockery, the binding or nailing to a tree, the tears of Mary, and the resurrection and the empty coffin!—or how not at all strange when we consider in what numerous forms and among how many peoples, this same parable and ritual had as a matter of fact been celebrated, and how it had ultimately come down to bring its message of redemption into a somewhat obscure Syrian city, in the special shape with which we are familiar.

Though the parable or legend in its special Christian form bears with it the consciousness of the presence of beings whom we may call gods, it is important to remember that in many or most of its earlier forms, though it dealt in 'spirits'—the spirit of the corn, or the spirit of the Spring, or the spirits of the rain and the thunder, or the spirits of totem-animals—it had not yet quite risen to the idea of gods. It had not risen to the conception of eternal deities sitting apart and governing the world in solemn conclave—as from the slopes of Olympus or the recesses of the Christian Heaven. It belonged, in fact, in its inception, to the age of Magic. The creed of Sin and Sacrifice, or of Guilt and Expiation—whatever we like to call it—was evolved perfectly naturally out of the human mind when brought face to face with Life and Nature) at some early stage of its self-consciousness. It was essentially the result of man's deep, original and instinctive sense of solidarity with Nature, now denied and belied and to some degree broken up by the growth and conscious insistence of the self-regarding impulses. It was the consciousness of disharmony and disunity, causing men to feel all the more poignantly the desire and the need of reconciliation. It was a realization of union made clear by its very loss. It assumed of course, in a subconscious way as I have already indicated, that the external world was the HABITAT of a mind or minds similar to man's own; but THAT being granted, it is evident that the particular theories current in this or that place about the nature of the world—the theories, as we should say, of science or theology—did not alter the general outlines of the creed; they only colored its details and gave its ritual different dramatic settings. The mental attitudes, for instance, of Abraham sacrificing the ram, or of the Siberian angakout slaughtering a totem-bear, or of a modern and pious Christian contemplating the Saviour on the Cross are really almost exactly the same. I mention this because in tracing the origins or the evolution of religions it is important to distinguish clearly what is essential and universal from that which is merely local and temporary. Some people, no doubt, would be shocked at the comparisons just made; but surely it is much more inspiring and encouraging to think that whatever progress HAS been made in the religious outlook of the world has come about through the gradual mental growth and consent of the peoples, rather than through some unique and miraculous event of a rather arbitrary and unexplained character—which indeed might never be repeated, and concerning which it would perhaps be impious to suggest that it SHOULD be repeated.

The consciousness then of Sin (or of alienation from the life of the whole), and of restoration or redemption through Sacrifice, seems to have disclosed itself in the human race in very far-back times, and to have symbolized itself in some most ancient rituals; and if we are shocked sometimes at the barbarities which accompanied those rituals, yet we must allow that these barbarities show how intensely the early people felt the solemnity and importance of the whole matter; and we must allow too that the barbarities did sear and burn themselves into rude and ignorant minds with the sense of the NEED of Sacrifice, and with a result perhaps which could not have been compassed in any other way.

For after all we see now that sacrifice is of the very essence of social life. "It is expedient that ONE man should die for the people"; and not only that one man should actually die, but (what is far more important) that each man should be ready and WILLING to die in that cause, when the occasion and the need arises. Taken in its larger meanings and implications Sacrifice, as conceived in the ancient world, was a perfectly reasonable thing. It SHOULD pervade modern life more than it does. All we have or enjoy flows from, or is implicated with, pain and suffering in others, and—if there is any justice in Nature or Humanity—it demands an equivalent readiness to suffer on our part. If Christianity has any real essence, that essence is perhaps expressed in some such ritual or practice of Sacrifice, and we see that the dim beginnings of this idea date from the far-back customs of savages coming down from a time anterior to all recorded history.

VIII. PAGAN INITIATIONS AND THE SECOND BIRTH

We have suggested in the last chapter how the conceptions of Sin and Sacrifice coming down to us from an extremely remote past, and embodied among the various peoples of the world sometimes in crude and bloodthirsty rites, sometimes in symbols and rituals of a gentler and more gracious character, descended at last into Christianity and became a part of its creed and of the creed of the modern world. On the whole perhaps we may trace a slow amelioration in this process and may flatter ourselves that the Christian centuries exhibit a more philosophical understanding of what Sin is, and a more humane conception of what Sacrifice SHOULD be, than the centuries preceding. But I fear that any very decided statement or sweeping generalization to that effect would be—to say the least—rash. Perhaps there IS a very slow amelioration; but the briefest glance at the history of the Christian churches—the horrible rancours and revenges of the clergy and the sects against each other in the fourth and fifth centuries A.D., the heresy-hunting crusades at Beziers and other places and the massacres of the Albigenses in the twelfth and thirteenth centuries, the witch-findings and burnings of the sixteenth and seventeenth, the hideous science-urged and bishop-blessed warfare of the twentieth—horrors fully as great as any we can charge to the account of the Aztecs or the Babylonians—must give us pause. Nor must we forget that if there is by chance a substantial amelioration in our modern outlook with regard to these matters the same had begun already before the advent of Christianity and can by no means be ascribed to any miraculous influence of that religion. Abraham was prompted to slay a ram as a substitute for his son, long before the Christians were thought of; the rather savage Artemis of the old Greek rites was (according to Pausanias) honored by the yearly sacrifice of a perfect boy and girl, but later it was deemed sufficient to draw a knife across their throats as a symbol, with the result of spilling only a few drops of their blood, or to flog the boys (with the same result) upon her altar. Among the Khonds in old days many victims (meriahs) were sacrificed to the gods, “but in time the man was replaced by a horse, the horse by a bull, the bull by a ram, the ram by a kid, the kid by fowls, and the fowls by many flowers.” At one time, according to the Yajur-Veda, there was a festival at which one hundred and twenty-five victims, men and women, boys and girls, were sacrificed; “but reform supervened, and now the victims were bound as before to the stake, but afterwards amid litanies to the immolated (god) Narayana, the sacrificing priest brandished a knife and—severed the bonds of the captives.” At the Athenian festival of the Thargelia, to which I referred in the last chapter, it appears that the victims, in later times, instead of being slain, were tossed from a height into the sea, and after being rescued were then simply banished; while at Leucatas a similar festival the fall of the victim was graciously broken by tying feathers and even living birds to his body.

With the lapse of time and the general progress of mankind, we may, I think, perceive some such slow ameliorations in the matter of the brutality and superstition of the old religions. How far any later ameliorations were due to the direct influence of Christianity might be a difficult question; but what I think we can clearly see—and what especially interests us here—is that in respect to its main religious ideas, and the mat-

ter underlying them (exclusive of the MANNER of their treatment, which necessarily has varied among different peoples) Christianity is of one piece with the earlier pagan creeds and is for the most part a re-statement and renewed expression of world-wide doctrines whose first genesis is lost in the haze of the past, beyond all recorded history.

I have illustrated this view with regard to the doctrine of Sin and Sacrifice. Let us take two or three other illustrations. Let us take the doctrine of Re-birth or Regeneration. The first few verses of St. John's Gospel are occupied with the subject of salvation through rebirth or regeneration. "Except a man be born again, he cannot see the kingdom of God." . . . "Except a man be born of water and the Spirit, he cannot enter into the kingdom of God." Our Baptismal Service begins by saying that "forasmuch as all men are conceived and born in sin; and that our Saviour Christ saith, None can enter into the kingdom of God except he be regenerate and born anew of water and the Holy Ghost"; therefore it is desirable that this child should be baptized, "received into Christ's Holy Church, and be made a lively member of the same." That, is to say, there is one birth, after the flesh, but a second birth is necessary, a birth after the Spirit and into the Church of Christ. Our Confirmation Service is simply a service repeating and confirming these views, at an age (fourteen to sixteen or so) when the boy or girl is capable of understanding what is being done.

But our Baptismal and Confirmation ceremonies combined are clearly the exact correspondence and parallel of the old pagan ceremonies of Initiation, which are or have been observed in almost every primitive tribe over the world. "The rite of the second birth," says Jane Harrison, "is widespread, universal, over half the savage world. With the savage to be twice-born is the rule. By his first birth he comes into the world; by his second he is born into his tribe. At his first birth he belongs to his mother and the women-folk; at his second he becomes a full-fledged man and passes into the society of the warriors of his tribe." . . . "These rites are very various, but they all point to one moral, that the former things are passed away and that the new-born man has entered upon a new life. Simplest of all, and most instructive, is the rite practised by the Kikuyu tribe of British East Africa, who require that every boy, just before circumcision, must be born again. The mother stands up with the boy crouching at her feet; she pretends to go through all the labour pains, and the boy on being reborn cries like a babe and is washed."

Let us pause for a moment. An Initiate is of course one who "enters in." He enters into the Tribe; he enters into the revelation of certain Mysteries; he becomes an associate of a certain Totem, a certain God; a member of a new Society, or Church—a church of Mithra, or Dionysus or Christ. To do any of these things he must be born again; he must die to the old life; he must pass through ceremonials which symbolize the change. One of these ceremonials is washing. As the new-born babe is washed, so must the new-born initiate be washed; and as by primitive man (and not without reason) BLOOD was considered the most vital and regenerative of fluids, the very elixir of life, so in earliest times it was common to wash the initiate with blood. If the initiate had

to be born anew, it would seem reasonable to suppose that he must first die. So, not unfrequently, he was wounded, or scourged, and baptized with his own blood, or, in cases, one of the candidates was really killed and his blood used as a substitute for the blood of the others. No doubt HUMAN sacrifice attended the earliest initiations. But later it was sufficient to be half-drowned in the blood of a Bull as in the Mithra cult, or 'washed in the blood of the Lamb' as in the Christian phraseology. Finally, with a growing sense of decency and aesthetic perception among the various peoples, washing with pure water came in the initiation-ceremonies to take the place of blood; and our baptismal service has reduced the ceremony to a mere sprinkling with water.

To continue the quotation from Miss Harrison: "More often the new birth is stimulated, or imagined, as a death and a resurrection, either of the boys themselves or of some one else in their presence. Thus at initiation among some tribes of South-east Australia, when the boys are assembled an old man dressed in stringy bark-fibre lies down in a grave. He is covered up lightly with sticks and earth, and the grave is smoothed over. The buried man holds in his hand a small bush which seems to be growing from the ground, and other bushes are stuck in the ground round about. The novices are then brought to the edge of the grave and a song is sung. Gradually, as the song goes on, the bush held by the buried man begins to quiver. It moves more and more, and bit by bit the man himself starts up from the grave."

Strange in our own Baptismal Service and just before the actual christening we read these words, "Then shall the Priest say: O merciful God, grant that old Adam in this child may be so BURIED that the new man may be raised up in him: grant that all carnal affections may die in him, and that all things belonging to the Spirit may live and grow in him!" Can we doubt that the Australian medicine-man, standing at the graveside of the re-arisen old black-fellow, pointed the same moral to the young initiates as the priest does to-day to those assembled before him in church—for indeed we know that among savage tribes initiations have always been before all things the occasions of moral and social teaching? Can we doubt that he said, in substance if not in actual words: "As this man has arisen from the grave, so you must also arise from your old childish life of amusement and self-gratification and, ENTER INTO the life of the tribe, the life of the Spirit of the tribe." "In totemistic societies," to quote Miss Harrison again, "and in the animal secret societies that seem to grow out of them, the novice is born again as THE SACRED ANIMAL. Thus among the Carrier Indians when a man wants to become a Lulem or 'Bear,' however cold the season he tears off his clothes, puts on a bear-skin and dashes into the woods, where he will stay for three or four days. Every night his fellow-villagers will go out in search parties to find him. They cry out Yi! Kelulem (come on, Bear), and he answers with angry growls. Usually they fail to find him, but he comes back at last himself. He is met, and conducted to the ceremonial lodge, and there in company with the rest of the Bears dances solemnly his first appearance. Disappearance and reappearance is as common a rite in initiation as stimulated killing and resurrection, and has the same object. Both are rites of transition, of passing from one to another." In the Christian ceremonies the boy or girl puts away childish things and puts on the new man, but instead of putting on a bear-skin he

puts on Christ. There is not so much difference as may appear on the surface. To be identified with your Totem is to be identified with the sacred being who watches over your tribe, who has given his life for your tribe; it is to be born again, to be washed not only with water but with the Holy Spirit of all your fellows. To be baptized into Christ ought to mean to be regenerated in the Holy Spirit of all humanity; and no doubt in cases it does mean this, but too often unfortunately it has only amounted to a pretence of religious sanction given to the meanest and bitterest quarrels of the Churches and the States.

This idea of a New Birth at initiation explains the prevalent pagan custom of subjecting the initiates to serious ordeals, often painful and even dangerous. If one is to be born again, obviously one must be ready to face death; the one thing cannot be without the other. One must be able to endure pain, like the Red Indian braves; to go long periods fasting and without food or drink, like the choupan among the Western Inuits—who, wanders for whole nights over the ice-fields under the moon, scantily clothed and braving the intense cold; to overcome the very fear of death and danger, like the Australian novices who, at first terrified by the sound of the bull-roarer and threats of fire and the knife, learn finally to cast their fears away. By so doing one puts off the old childish things, and qualifies oneself by firmness and courage to become a worthy member of the society into which one is called. The rules of social life are taught—the duty to one's tribe, and to oneself, truth-speaking, defence of women and children, the care of cattle, the meaning of sex and marriage, and even the mysteries of such religious ideas and rudimentary science as the tribe possesses. And by so doing one really enters into a new life. Things of the spiritual world begin to dawn. Julius Firmicus, in describing the mysteries of the resurrection of Osiris, says that when the worshipers had satiated themselves with lamentations over the death of the god then the priest would go round anointing them with oil and whispering, "Be of good cheer, O Neophytes of the new-arisen God, for to us too from our pains shall come salvation."

It would seem that at some very early time in the history of tribal and priestly initiations an attempt was made to impress upon the neophytes the existence and over-shadowing presence of spiritual and ghostly beings. Perhaps the pains endured in the various ordeals, the long fastings, the silences in the depth of the forests or on the mountains or among the ice-floes, helped to rouse the visionary faculty. The developments of this faculty among the black and colored peoples—East-Indian, Burmese, African, American-Indian, etc.—are well known. Miss Alice Fletcher, who lived among the Omaha Indians for thirty years, gives a most interesting account of the general philosophy of that people and their rites of initiation. "The Omahas regard all animate and inanimate forms, all phenomena, as pervaded by a common life, which was continuous with and similar to the will-power they were conscious of in themselves. This mysterious power in all things they called Wakonda, and through it all things were related to man and to each other. In the idea of the continuity of life a relation was maintained between the seen and the unseen, the dead and the living, and also between the fragment of anything and its entirety." Thus an Omaha novice might at any time seek to obtain Wakonda by what was called THE RITE OF THE VISION. He would go out

alone, fast, chant incantations, and finally fall into a trance (much resembling what in modern times has been called COSMIC CONSCIOUSNESS) in which he would perceive the inner relations of all things and the solidarity of the least object with the rest of the universe.

Another rite in connection with initiation, and common all over the pagan world—in Greece, America, Africa, Australia, New Mexico, etc.—was the daubing of the novice all over with clay or chalk or even dung, and then after a while removing the same. The novice must have looked a sufficiently ugly and uncomfortable object in this state; but later, when he was thoroughly WASHED, the ceremony must have afforded a thrilling illustration of the idea of a new birth, and one which would dwell in the minds of the spectators. When the daubing was done as not infrequently happened with white clay or gypsum, and the ritual took place at night, it can easily be imagined that the figures of young men and boys moving about in the darkness would lend support to the idea that they were spirits belonging to some intermediate world—who had already passed through death and were now waiting for their second birth on earth (or into the tribe) which would be signalized by their thorough and ceremonial washing. It will be remembered that Herodotus (viii) gives a circumstantial account of how the Phocians in a battle with the Thessalians smeared six hundred of their bravest warriors with white clay so that, looking like supernatural beings, and falling upon the Thessalians by night, they terrified the latter and put them to instant flight.

Such then—though only very scantily described—were some of the rites of Initiation and Second Birth celebrated in the old Pagan world. The subject is far too large for adequate treatment within the present limits; but even so we cannot but be struck by the appropriateness in many cases of the teaching thus given to the young, the concreteness of the illustrations, the effectiveness of the symbols used, the dramatic character of the rites, the strong enforcement of lessons on the nature and duties of the life into which the candidates were about to enter. Christianity followed on, and inherited these traditions, but one feels that in its ceremonies of Baptism and Confirmation, which of course correspond to the Pagan Initiations, it falls short of the latter. Its ceremonies (certainly as we have them to-day in Protestant countries) are of a very milk-and-watery character; all allusion to and teaching on the immensely important subject of Sex is omitted, the details of social and industrial morality are passed by, and instruction is limited to a few rather commonplace lessons in general morality and religion.

It may be appropriate here, before leaving the subject of the Second Birth, to inquire how it has come about that this doctrine—so remote and metaphysical as it might appear—has been taken up and embodied in their creeds and rituals by quite PRIMITIVE people all over the world, to such a degree indeed that it has ultimately been adopted and built into the foundations of the latter and more intellectual religions, like Hinduism, Mithraism, and the Egyptian and Christian cults. I think the answer to this question must be found in the now-familiar fact that the earliest peoples felt themselves so much a part of Nature and the animal and vegetable world around them that

(whenever they thought about these matters at all) they never for a moment doubted that the things which were happening all round them in the external world were also happening within themselves. They saw the Sun, overclouded and nigh to death in winter, come to its birth again each year; they saw the Vegetation shoot forth anew in spring—the revival of the spirit of the Earth; the endless breeding of the Animals, the strange transformations of Worms and Insects; the obviously new life taken on by boys and girls at puberty; the same at a later age when the novice was transformed into the medicine-man—the choupan into the angakok among the Esquimaux, the Dacotah youth into the wakan among the Red Indians; and they felt in their sub-conscious way the same everlasting forces of rebirth and transformation working within themselves. In some of the Greek Mysteries the newly admitted Initiates were fed for some time after on milk only “as though we were being born again.” (See Sallustius, quoted by Gilbert Murray.) When sub-conscious knowledge began to glimmer into direct consciousness one of the first aspects (and no doubt one of the truest) under which people saw life was just thus: as a series of rebirths and transformations. The most modern science, I need hardly say, in biology as well as in chemistry and the field of inorganic Nature, supports that view. The savage in earliest times FELT the truth of some things which we to-day are only beginning intellectually to perceive and analyze.

Christianity adopted and absorbed—as it was bound to do—this world-wide doctrine of the second birth. Passing over its physiological and biological applications, it gave to it a fine spiritual significance—or rather it insisted especially on its spiritual significance, which (as we have seen) had been widely recognized before. Only—as I suppose must happen with all local religions—it narrowed the application and outlook of the doctrine down to a special case—“As in Adam all die, so in CHRIST shall all be made alive.” The Universal Spirit which can give rebirth and salvation to EVERY child of man to whom it comes, was offered only under a very special form—that of Jesus Christ. In this respect it was no better than the religions which preceded it. In some respects—that is, where it was especially fanatical, blinkered, and hostile to other sects—it was WORSE. But to those who perceive that the Great Spirit may bring new birth and salvation to some under the form of Osiris, equally well as to others under the form of Jesus, or again to some under the form of a Siberian totem-Bear equally as to others under the form of Osiris, these questionings and narrowings fall away as of no importance. We in this latter day can see the main thing, namely that Christianity was and is just one phase of a world-old religion, slowly perhaps expanding its scope, but whose chief attitudes and orientations have been the same through the centuries.

Many other illustrations might be taken of the truth of this view, but I will confine myself to two or three more. There is the instance of the Eucharist and its exceedingly wide-spread celebration (under very various forms) among the pagans all over the world—as well as among Christians. I have already said enough on this subject, and need not delay over it. By partaking of the sacramental meal, even in its wildest and crudest shapes, as in the mysteries of Dionysus, one was identified with and united to the god; in its milder and more spiritual aspects as in the Mithraic, Egyptian, Hindu and Christian cults, one passed behind the veil of maya and this ever-changing world, and

entered into the region of divine peace and power.

Or again the doctrine of the Saviour. That also is one on which I need not add much to what has been said already. The number of pagan deities (mostly virgin-born and done to death in some way or other in their efforts to save mankind) is so great as to be difficult to keep account of. The god Krishna in India, the god Indra in Nepaul and Thibet, spilt their blood for the salvation of men; Buddha said, according to Max Muller, "Let all the sins that were in the world fall on me, that the world may be delivered"; the Chinese Tien , the Holy One—"one with God and existing with him from all eternity"—died to save the world; the Egyptian Osiris was called Saviour, so was Horus; so was the Persian Mithras; so was the Greek Hercules who overcame Death though his body was consumed in the burning garment of mortality, out of which he rose into heaven. So also was the Phrygian Attis called Saviour, and the Syrian Tammuz or Adonis likewise—both of whom, as we have seen, were nailed or tied to a tree, and afterwards rose again from their biers, or coffins. Prometheus, the greatest and earliest benefactor of the human race, was NAILED BY THE HANDS and feet, and with arms extended, to the rocks of Mount Caucasus. Bacchus or Dionysus, born of the virgin Semele to be the Liberator of mankind (Dionysus Eleutherios as he was called), was torn to pieces, not unlike Osiris. Even in far Mexico Quetzalcoatl, the Saviour, was born of a virgin, was tempted, and fasted forty days, was done to death, and his second coming looked for so eagerly that (as is well known) when Cortes appeared, the Mexicans, poor things, greeted HIM as the returning god! In Peru and among the American Indians, North and South of the Equator, similar legends are, or were, to be found.

Briefly sketched as all this is, it is enough to prove quite abundantly that the doctrine of the Saviour is world-wide and world-old, and that Christianity merely appropriated the same and (as the other cults did) gave it a special color. Probably the wide range of this doctrine would have been far better and more generally known, had not the Christian Church, all through, made the greatest of efforts and taken the greatest precautions to extinguish and snuff out all evidence of pagan claims on the subject. There is much to show that the early Church took this line with regard to pre-Christian saviours; and in later times the same policy is remarkably illustrated by the treatment in the sixteenth century of the writings of Sahagun the Spanish missionary—to whose work I have already referred. Sahagun was a wonderfully broad-minded and fine man who, while he did not conceal the barbarities of the Aztec religion, was truthful enough to point out redeeming traits in the manners and customs of the people and some resemblances to Christian doctrine and practice. This infuriated the bigoted Catholics of the newly formed Mexican Church. They purloined the manuscripts of Sahagun's Historia and scattered and hid them about the country, and it was only after infinite labor and an appeal to the Spanish Court that he got them together again. Finally, at the age of eighty, having translated them into Spanish (from the original Mexican) he sent them in two big volumes home to Spain for safety; but there almost immediately THEY DISAPPEARED, and could not be found! It was only after TWO CENTURIES that they ultimately turned up (1790) in a Convent at Tolosa in Navarre. Lord Kingsborough published them in England in 1830.

I have thus dwelt upon several of the main doctrines of Christianity—namely, those of Sin and Sacrifice, the Eucharist, the Saviour, the Second Birth, and Transfiguration—as showing that they are by no means unique in our religion, but were common to nearly all the religions of the ancient world. The list might be much further extended, but there is no need to delay over a subject which is now very generally understood. I will, however, devote a page or two to one instance, which I think is very remarkable, and full of deep suggestion.

There is no doctrine in Christianity which is more revered by the adherents of that religion, or held in higher estimation, than that God sacrificed his only Son for the salvation of the world; also that since the Son was not only of like nature but of the SAME nature with the Father, and equal to him as being the second Person of the Divine Trinity, the sacrifice amounted to an immolation of Himself for the good of mankind. The doctrine is so mystical, so remote, and in a sense so absurd and impossible, that it has been a favorite mark through the centuries for the ridicule of the scoffers and enemies of the Church; and here, it might easily be thought, is a belief which—whether it be considered glorious or whether contemptible—is at any rate unique, and peculiar to that Church.

And yet the extraordinary fact is that a similar belief ranges all through the ancient religions, and can be traced back to the earliest times. The word host which is used in the Catholic Mass for the bread and wine on the Altar, supposed to be the transubstantiated body and blood of Christ, is from the Latin Hostia which the dictionary interprets as “an animal slain in sacrifice, a sin-offering.” It takes us far far back to the Totem stage of folk-life, when the tribe, as I have already explained, crowned a victim-bull or bear or other animal with flowers, and honoring it with every offering of food and worship, sacrificed the victim to the Totem spirit of the tribe, and consumed it in an Eucharistic feast—the medicine-man or priest who conducted the ritual wearing a skin of the same beast as a sign that he represented the Totem-divinity, taking part in the sacrifice of ‘himself to himself.’ It reminds us of the Khonds of Bengal sacrificing their meriahs crowned and decorated as gods and goddesses; of the Aztecs doing the same; of Quetzalcoatl pricking his elbows and fingers so as to draw blood, which he offered on his own altar; or of Odin hanging by his own desire upon a tree. “I know I was hanged upon a tree shaken by the winds for nine long nights. I was transfixed by a spear; I was moved to Odin, myself to myself.” And so on. The instances are endless. “I am the oblation,” says the Lord Krishna in the Bhagavad Gita, “I am the sacrifice, I the ancestral offering.” “In the truly orthodox conception of sacrifice,” says Elie Reclus, “the consecrated offering, be it man, woman or virgin, lamb or heifer, cock or dove, represents THE DEITY HIMSELF. . . . Brahma is the ‘imperishable sacrifice’; Indra, Soma, Hari and the other gods, became incarnate in animals to the sole end that they might be immolated. Perusha, the Universal Being, caused himself to be slain by the Immortals, and from his substance were born the birds of the air, wild and domestic animals, the offerings of butter and curds. The world, declared the Rishis, is a series of sacrifices disclosing other sacrifices. To stop them would be to suspend the life of Nature. The

god Siva, to whom the Tipperahs of Bengal are supposed to have sacrificed as many as a thousand human victims a year, said to the Brahamins: 'It is I that am the actual offering; it is I that you butcher upon my altars.'"

It was in allusion to this doctrine that R. W. Emerson, paraphrasing the Katha-Upanishad, wrote that immortal verse of his:—

If the red slayer thinks he slays,
Or the slain thinks he is slain,
They know not well the subtle ways
I take, and pass, and turn again.

I say it is an astonishing thing to think and realize that this profound and mystic doctrine of the eternal sacrifice of Himself, ordained by the Great Spirit for the creation and salvation of the world—a doctrine which has attracted and fascinated many of the great thinkers and nobler minds of Europe, which has also inspired the religious teachings of the Indian sages and to a less philosophical degree the writings of the Christian Saints—should have been seized in its general outline and essence by rude and primitive people before the dawn of history, and embodied in their rites and ceremonials. What is the explanation of this fact?

It is very puzzling. The whole subject is puzzling. The world-wide adoption of similar creeds and rituals (and, we may add, legends and fairy tales) among early peoples, and in far-sundered places and times is so remarkable that it has given the students of these subjects 'furiously to think'—yet for the most part without great success in the way of finding a solution. The supposition that (1) the creed, rite or legend in question has sprung up, so to speak, accidentally, in one place, and then has travelled (owing to some inherent plausibility) over the rest of the world, is of course one that commends itself readily at first; but on closer examination the practical difficulties it presents are certainly very great. These include the migrations of customs and myths in quite early ages of the earth across trackless oceans and continents, and between races and peoples absolutely incapable of understanding each other. And if to avoid these difficulties it is assumed that the present human race all proceeds from one original stock which radiating from one centre—say in South-Eastern Asia—overspread the world, carrying its rites and customs with it, why, then we are compelled to face the difficulty of supposing this radiation to have taken place at an enormous time ago (the continents being then all more or less conjoined) and at a period when it is doubtful if any religious rites and customs at all existed; not to mention the further difficulty of supposing all the four or five hundred languages now existing to be descended from one common source. The far tradition of the Island of Atlantis seems to afford a possible explanation of the community of rites and customs between the Old and New World, and this without assuming in any way that Atlantis (if it existed) was the original and SOLE cradle of the human race. Anyhow it is clear that these origins of human culture must be of extreme antiquity, and that it would not be wise to be put off the track of the investiga-

tion of a possible common source merely by that fact of antiquity.

A second supposition, however, is (2) that the natural psychological evolution of the human mind has in the various times and climes led folk of the most diverse surroundings and heredity—and perhaps even sprung from separate anthropoid stocks—to develop their social and religious ideas along the same general lines—and that even to the extent of exhibiting at times a remarkable similarity in minute details. This is a theory which commends itself greatly to a deeper and more philosophical consideration; but it brings us up point-blank against another most difficult question (which we have already raised), namely, how to account for extremely rude and primitive peoples in the far past, and on the very borderland of the animal life, having been SUSCEPTIBLE to the germs of great religious ideas (such as we have mentioned) and having been instinctively—though not of course by any process of conscious reasoning—moved to express them in symbols and rites and ceremonials, and (later no doubt) in myths and legends, which satisfied their FEELINGS and sense of fitness—though they may not have known WHY—and afterwards were capable of being taken up and embodied in the great philosophical religions.

This difficulty almost compels us to a view of human knowledge which has found supporters among some able thinkers—the view, namely, that a vast store of knowledge is already contained in the subconscious mind of man (and the animals) and only needs the provocation of outer experience to bring it to the surface; and that in the second stage of human psychology this process of crude and piecemeal externalization is taking place, in preparation for the final or third stage in which the knowledge will be re-absorbed and become direct and intuitional on a high and harmonious plane—something like the present intuition of the animals as we perceive it on the animal plane. However this general subject is one on which I shall touch again, and I do not propose to dwell on it at any length now.

There is a third alternative theory (3)—a combination of (1) and (2)—namely, that if one accepts (2) and the idea that at any given stage of human development there is a PREDISPOSITION to certain symbols and rites belonging to that stage, then it is much more easy to accept theory (1) as an important factor in the spread of such symbols and rites; for clearly, then, the smallest germ of a custom or practice, transported from one country or people to another at the right time, would be sufficient to wake the development or growth in question and stimulate it into activity. It will be seen, therefore, that the important point towards the solution of this whole puzzling question is the discussion, of theory (2)—and to this theory, as illustrated by the world-wide myth of the Golden Age, I will now turn.

IX. MYTH OF THE GOLDEN AGE

The tradition of a "Golden Age" is widespread over the world, and it is not necessary to go at any length into the story of the Garden of Eden and the other legends which in almost every country illustrate this tradition. Without indulging in sentiment on the subject we may hold it not unlikely that the tradition is justified by the remembrance, among the people of every race, of a pre-civilization period of comparative harmony and happiness when two things, which to-day we perceive to be the prolific causes of discord and misery, were absent or only weakly developed—namely, PROPERTY and SELF-CONSCIOUSNESS.

During the first century B.C. there was a great spread of Messianic Ideas over the Roman world, and Virgil's 4th Eclogue, commonly called the Messianic Eclogue, reflects very clearly this state of the public mind. The expected babe in the poem was to be the son of Octavian (Augustus) the first Roman emperor, and a messianic halo surrounded it in Virgil's verse. Unfortunately it turned out to be a GIRL! However there is little doubt that Virgil did—in that very sad age of the world, an age of "misery and massacre," and in common with thousands of others—look for the coming of a great 'redeemer.' It was only a few years earlier—about B.C. 70—that the great revolt of the shamefully maltreated Roman slaves occurred, and that in revenge six thousand prisoners from Spartacus' army were nailed on crosses all the way from Rome to Capua (150 miles). But long before this Hesiod had recorded a past Golden Age when life had been gracious in communal fraternity and joyful in peace, when human beings and animals spoke the same language, when death had followed on sleep, without old age or disease, and after death men had moved as good daimones or genii over the lands. Pindar, three hundred years after Hesiod, had confirmed the existence of the Islands of the Blest, where the good led a blameless, tearless, life. Plato the same, with further references to the fabled island of Atlantis; the Egyptians believed in a former golden age under the god Ra to which they looked back with regret and envy; the Persians had a garden of Eden similar to that of the Hebrews; the Greeks a garden of the Hesperides, in which dwelt the serpent whose head was ultimately crushed beneath the heel of Hercules; and so on. The references to a supposed far-back state of peace and happiness are indeed numerous.

So much so that latterly, and partly to explain their prevalence, a theory has been advanced which may be worth while mentioning. It is called the "Theory of intra-uterine Blessedness," and, remote as it may at first appear, it certainly has some claim for attention. The theory is that in the minds of mature people there still remain certain vague memories of their pre-natal days in the maternal womb—memories of a life which, though full of growing vigor and vitality, was yet at that time one of absolute harmony with the surroundings, and of perfect peace and contentment, spent within the body of the mother—the embryo indeed standing in the same relation to the mother as St. Paul says WE stand to God, "IN whom we live and move and have our being"; and that these vague memories of the intra-uterine life in the individual are referred back by the mature mind to a past age in the life of the RACE. Though it would not be

easy at present to positively confirm this theory, yet one may say that it is neither improbable nor unworthy of consideration; also that it bears a certain likeness to the former ones about the Eden-gardens, etc. The well-known parallelism of the Individual history with the Race-history, the “recapitulation” by the embryo of the development of the race, does in fact afford an additional argument for its favorable reception.

These considerations, and what we have said so often in the foregoing chapters about the unity of the Animals (and Early Man) with Nature, and their instinctive and age-long adjustment to the conditions of the world around them, bring us up hard and fast against the following conclusions, which I think we shall find difficult to avoid.

We all recognize the extraordinary grace and beauty, in their different ways, of the (wild) animals; and not only their beauty but the extreme fitness of their actions and habits to their surroundings—their subtle and penetrating Intelligence in fact. Only we do not generally use the word “Intelligence.” We use another word (Instinct)—and rightly perhaps, because their actions are plainly not the result of definite self-conscious reasoning, such as we use, carried out by each individual; but are (as has been abundantly proved by Samuel Butler and others) the systematic expression of experiences gathered up and sorted out and handed down from generation to generation in the bosom of the race—an Intelligence in fact, or Insight, of larger subtler scope than the other, and belonging to the tribal or racial Being rather than to the isolated individual—a super-consciousness in fact, ramifying afar in space and time.

But if we allow (as we must) this unity and perfection of nature, and this somewhat cosmic character of the mind, to exist among the Animals, we can hardly refuse to believe that there must have been a period when Man, too, hardly as yet differentiated from them, did himself possess these same qualities—perhaps even in greater degree than the animals—of grace and beauty of body, perfection of movement and action, instinctive perception and knowledge (of course in limited spheres); and a period when he possessed above all a sense of unity with his fellows and with surrounding Nature which became the ground of a common consciousness between himself and his tribe, similar to that which Maeterlinck, in the case of the Bees, calls the Spirit of the Hive. It would be difficult, nay impossible, to suppose that human beings on their first appearance formed an entire exception in the process of evolution, or that they were completely lacking in the very graces and faculties which we so admire in the animals—only of course we see that (LIKE the animals) they would not be SELF-conscious in these matters, and what perception they had of their relations to each other or to the world around them would be largely inarticulate and SUB-conscious—though none the less real for that.

Let us then grant this preliminary assumption—and it clearly is not a large or hazardous one—and what follows? It follows—since to-day discord is the rule, and Man has certainly lost the grace, both physical and mental, of the animals—that at some period a break must have occurred in the evolution-process, a discontinuity—similar perhaps to that which occurs in the life of a child at the moment when it is born into the

world. Humanity took a new departure; but a departure which for the moment was signaled as a LOSS—the loss of its former harmony and self-adjustment. And the cause or accompaniment of this change was the growth of Self-consciousness. Into the general consciousness of the tribe (in relation to its environment) which in fact had constituted the mentality of the animals and of man up to this stage, there now was intruded another kind of consciousness, a consciousness centering round each little individual self and concerned almost entirely with the interests of the latter. Here was evidently a threat to the continuance of the former happy conditions. It was like the appearance of innumerable little ulcers in a human body—a menace which if continued would inevitably lead to the break-up of the body. It meant loss of tribal harmony and nature-adjustment. It meant instead of unity a myriad conflicting centres; it meant alienation from the spirit of the tribe, the separation of man from man, discord, recrimination, and the fatal unfolding of the sense of sin. The process symbolized itself in the legend of the Fall. Man ate of the Tree of the knowledge of good and evil. Sometimes people wonder why knowledge of any kind—and especially the knowledge of good and evil—should have brought a curse. But the reason is obvious. Into, the placid and harmonious life of the animal and human tribes fulfilling their days in obedience to the slow evolutions and age-long mandates of nature, Self-consciousness broke with its inconvenient and impossible query: “How do these arrangements suit ME? Are they good for me, are they evil for me? I want to know. I WILL KNOW!” Evidently knowledge (such knowledge as we understand by the word) only began, and could only begin, by queries relating to the little local self. There was no other way for it to begin. Knowledge and self-consciousness were born, as twins, together. Knowledge therefore meant Sin; for self-consciousness meant sin (and it means sin to-day). Sin is Separation. That is probably (though disputed) the etymology of the word—that which sunders. The essence of sin is one’s separation from the whole (the tribe or the god) of which one is a part. And knowledge—which separates subject from object, and in its inception is necessarily occupied with the ‘good and evil’ of the little local self, is the great engine of this separation. [Mark! I say nothing AGAINST this association of Self-consciousness with ‘Sin’ (so-called) and ‘Knowledge’ (so-called). The growth of all three together is an absolutely necessary part of human evolution, and to rail against it would be absurd. But we may as well open our eyes and see the fact straight instead of blinking it.] The culmination of the process and the fulfilment of the ‘curse’ we may watch to-day in the towering expansion of the self-conscious individualized Intellect—science as the handmaid of human Greed devastating the habitable world and destroying its unworthy civilization. And the process must go on—necessarily must go on—until Self-consciousness, ceasing its vain quest (vain in both senses) for the separate domination of life, surrenders itself back again into the arms of the Mother-consciousness from which it originally sprang—surrenders itself back, not to be merged in nonentity, but to be affiliated in loving dependence on and harmony with the cosmic life.

All this I have dealt with in far more detail in *Civilization: its Cause and Cure*, and in *The Art of Creation*; but I have only repeated the outline of it as above, because some such outline is necessary for the proper ordering and understanding of the points which follow.

We are not concerned now with the ultimate effects of the 'Fall' of Man or with the present-day fulfilment of the Eden-curse. What we want to understand is how the 'Fall' into self-consciousness led to that great panorama of Ritual and Religion which we have very briefly described and summarized in the preceding chapters of this book. We want for the present to fix our attention on the COMMENCEMENT of that process by which man lapsed away from his living community with Nature and his fellows into the desert of discord and toil, while the angels of the flaming sword closed the gates of Paradise behind him.

It is evident I think that in that 'golden' stage when man was simply the crown and perfection of the animals—and it is hardly possible to refuse the belief in such a stage—he possessed in reality all the essentials of Religion. It is not necessary to sentimentalize over him; he was probably raw and crude in his lusts of hunger and of sex; he was certainly ignorant and superstitious; he loved fighting with and persecuting 'enemies' (which things of course all religions to-day—except perhaps the Buddhist—love to do); he was dominated often by unreasoning Fear, and was consequently cruel. Yet he was full of that Faith which the animals have to such an admirable degree—unhesitating faith in the inner promptings of his OWN nature; he had the joy which comes of abounding vitality, springing up like a fountain whose outlet is free and unhindered; he rejoiced in an untroubled and unbroken sense of unity with his Tribe, and in elaborate social and friendly institutions within its borders; he had a marvelous sense-acuteness towards Nature and a gift in that direction verging towards "second-sight"; strengthened by a conviction—which had never become CONSCIOUS because it had never been QUESTIONED—of his own personal relation to the things outside him, the Earth, the Sky, the Vegetation, the Animals. Of such a Man we get glimpses in the far past—though indeed only glimpses, for the simple reason that all our knowledge of him comes through civilized channels; and wherever civilization has touched these early peoples it has already withered and corrupted them, even before it has had the sense to properly observe them. It is sufficient, however, just to mention peoples like some of the early Pacific Islanders, the Zulus and Kafirs of South Africa, the Fans of the Congo Region (of whom Winwood Reade speaks so highly), some of the Malaysian and Himalayan tribes, the primitive Chinese, and even the evidence with regard to the neolithic peoples of Europe, in order to show what I mean.

Perhaps one of the best ideas of the gulf of difference between the semi-civilized and the quite primal man is given by A. R. Wallace in his *Life* (Vol. i, p. 288): "A most unexpected sensation of surprise and delight was my first meeting and living with man in a state of nature with absolute uncontaminated savages! This was on the Uaupes river. . . They were all going about their own work or pleasure, which had nothing to do with the white men or their ways; they walked with the free step of the independent forest-

dweller . . . original and self-sustaining as the wild animals of the forests, absolutely independent of civilization . . . living their own lives in their own way, as they had done for countless generations before America was discovered. Indeed the true denizen of the Amazonian forests, like the forest itself, is unique and not to be forgotten.” Elsewhere Wallace speaks of the quiet, good-natured, inoffensive character of these copper-colored peoples, and of their quickness of hand and skill, and continues: “their figures are generally superb; and I have never felt so much pleasure in gazing at the finest statue as at these living illustrations of the beauty of the human form.”

Though some of the peoples just mentioned may be said to belong to different grades or stages of human evolution and physically some no doubt were far superior to others, yet they mostly exhibit this simple grace of the bodily and mental organism, as well as that closeness of tribal solidarity of which I have spoken. The immense antiquity, of the clan organization, as shown by investigations into early marriage, points to the latter conclusion. Travellers among Bushmen, Hottentots, Fuegians, Esquimaux, Papuans and other peoples—peoples who have been pushed aside into unfavorable areas by the invasion of more warlike and better-equipped races, and who have suffered physically in consequence—confirm this. Kropotkin, speaking of the Hottentots, quotes the German author P. Kolben who travelled among them in 1275 or so. “He knew the Hottentots well and did not pass by their defects in silence, but could not praise their tribal morality highly enough. Their word is sacred, he wrote, they know nothing of the corruption and faithless arts of Europe. They live in great tranquillity and are seldom at war with their neighbors, and are all kindness and goodwill to one another.” Kropotkin further says: “Let me remark that when Kolben says ‘they are certainly the most friendly, the most liberal and the most benevolent people to one another that ever appeared on the earth’ he wrote a sentence which has continually appeared since in the description of savages. When first meeting with primitive races, the Europeans usually make a caricature of their life; but when an intelligent man has stayed among them for a longer time he generally describes them as the ‘kindest’ or the ‘gentlest’ race on the earth. These very same words have been applied to the Ostyaks, the Samoyedes, the Eskimos, the Dyaks, the Aleuts, the Papuans, and so on, by the highest authorities. I also remember having read them applied to the Tunguses, the Tchuktchis, the Sioux, and several others. The very frequency of that high commendation already speaks volumes in itself.”

Many of the tribes, like the Aleuts, Eskimos, Dyaks, Papuans, Fuegians, etc., are themselves in the Neolithic stage of culture—though for the reason given above probably degenerated physically from the standard of their neolithic ancestors; and so the conclusion is forced upon one that there must have been an IMMENSE PERIOD, prior to the first beginnings of ‘civilization,’ in which the human tribes in general led a peaceful and friendly life on the earth, comparatively little broken up by dissensions, in close contact with Nature and in that degree of sympathy with and understanding of the Animals which led to the establishment of the Totem system. Though it would be absurd to credit these tribes with any great degree of comfort and well-being according to our modern standards, yet we may well suppose that the memory of this long period

lingered on for generations and generations and was ultimately idealized into the Golden Age, in contrast to the succeeding period of everlasting warfare, rancor and strife, which came in with the growth of Property with its greeds and jealousies, and the accentuation of Self-consciousness with all its vanities and ambitions.

I say that each tribe at this early stage of development had within it the ESSENTIALS of what we call Religion—namely a bedrock sense of its community with Nature, and of the Common life among its members—a sense so intimate and fundamental that it was hardly aware of itself (any more than the fish is aware of the sea in which it lives), but yet was really the matrix of tribal thought and the spring of tribal action. It was this sense of unity which was destined by the growth of SELF-CONSCIOUSNESS to come to light and evidence in the shape of all manner of rituals and ceremonials; and by the growth of the IMAGINATIVE INTELLECT to embody itself in the figures and forms of all manner of deities.

Let us examine into this a little more closely. A lark soaring in the eye of the sun, and singing rapt between its “heaven and home” realizes no doubt in actual fact all that those two words mean to us; yet its realization is quite subconscious. It does not define its own experience: it FEELS but it does not THINK. In order to come to the stage of THINKING it would perhaps be necessary that the lark should be exiled from the earth and the sky, and confined in a cage. Early Man FELT the great truths and realities of Life—often I believe more purely than we do—but he could not give form to his experience. THAT stage came when he began to lose touch with these realities; and it showed itself in rites and ceremonials. The inbreak of self-consciousness brought OUT the facts of his inner life into ritualistic and afterwards into intellectual forms.

Let me give examples. For a long time the Tribe is all in all; the individual is completely subject to the ‘Spirit of the Hive’; he does not even THINK of contravening it. Then the day comes when self-interest, as apart from the Tribe, becomes sufficiently strong to drive him against some tribal custom. He breaks the tabu; he eats the forbidden apple; he sins against the tribe, and is cast out. Suddenly he finds himself an exile, lonely, condemned and deserted. A horrible sense of distress seizes him—something of which he had no experience before. He tries to think about it all, to understand the situation, but is dazed and cannot arrive at any conclusion. His one NECESSITY is Reconciliation, Atonement. He finds he cannot LIVE outside of and alienated from his tribe. He makes a Sacrifice, an offering to his fellows, as a seal of sincerity—an offering of his own bodily suffering or precious blood, or the blood of some food-animal, or some valuable gift or other—if only he may be allowed to return. The offering is accepted. The ritual is performed; and he is received back. I have already spoken of this perfectly natural evolution of the twin-ideas of Sin and Sacrifice, so I need not enlarge upon the subject. But two things we may note here: (1) that the ritual, being so concrete (and often severe), graves itself on the minds of those concerned, and expresses the feelings of the tribe, with an intensity and sharpness of outline which no words could rival, and (2) that such rituals may have, and probably did, come into use even

while language itself was in an infantile condition and incapable of dealing with the psychological situation except by symbols. They, the rituals, were the first effort of the primitive mind to get beyond, subconscious feeling and emerge into a world of forms and definite thought.

Let us carry the particular instance, given above, a stage farther, even to the confines of abstract Thought and Philosophy. I have spoken of "The Spirit of the Hive" as if the term were applicable to the Human as well as to the Bee tribe. The individual bee obviously has never THOUGHT about that 'Spirit,' nor mentally understood what Maeterlinck means by it; and yet in terms of actual experience it is an intense reality to the bee (ordaining for instance on some fateful day the slaughter of all the drones), controlling bee-movements and bee-morality generally. The individual tribesman similarly steeped in the age-long human life of his fellows has never thought of the Tribe as an ordaining being or Spirit, separate from himself—TILL that day when he is exiled and outcast from it. THEN he sees himself and the tribe as two opposing beings, himself of course an Intelligence or Spirit in his own limited degree, the Tribe as a much greater Intelligence or Spirit, standing against and over him. From that day the conception of a god arises on him. It may be only a totem-god—a divine Grizzly-Bear or what not—but still a god or supernatural Presence, embodied in the life of the tribe. This is what Sin has taught him. This is what Fear, founded on self-consciousness, has revealed to him. The revelation may be true, or it may be fallacious (I do not prejudge it); but there it is—the beginning of that long series of human evolutions which we call Religion.

So much for the genesis of the religious ideas of Sin and Sacrifice, and the rites connected with these ideas—their genesis through the in-break of self-consciousness upon the corporate SUB-consciousness of the life of the Community. But an exactly similar process may be observed in the case of the other religious ideas.

I spoke of the doctrine of the SECOND BIRTH, and the rites connected with it both in Paganism and in Christianity. There is much to show that among quite primitive peoples there is less of shrinking from death and more of certainty about a continued life after death than we generally find among more intellectual and civilized folk. It is, or has been, quite, common among many tribes for the old and decrepit, who are becoming a burden to their fellows, to offer themselves for happy dispatch, and to take willing part in the ceremonial preparations for their own extinction; and this readiness is encouraged by their naive and untroubled belief in a speedy transference to "happy hunting-grounds" beyond the grave. The truth is that when, as in such cases, the tribal life is very whole and unbroken—each individual identifying himself completely with the tribe—the idea of the individual's being dropped out at death, and left behind by the tribe, hardly arises. The individual is the tribe, has no other existence. The tribe goes on, living a life which is eternal, and only changes its hunting-grounds; and the individual, identified with the tribe, feels in some subconscious way the same about himself.

But when one member has broken faith with the tribe, when he has sinned against it and become an outcast—ah! then the terrors of death and extinction loom large upon him. “The wages of sin is death.” There comes a period in the evolution of tribal life when the primitive bonds are loosening, when the tendency towards SELF-will and SELF-determination (so necessary of course in the long run for the evolution of humanity) becomes a real danger to the tribe, and a terror to the wise men and elders of the community. It is seen that the children inherit this tendency—even from their infancy. They are no longer mere animals, easily herded; it seems that they are born in sin—or at least in ignorance and neglect of their tribal life and calling. The only cure is that they **MUST BE BORN AGAIN**. They must deliberately and of set purpose be adopted into the tribe, and be made to realize, even severely, in their own persons what is happening. They must go through the initiations necessary to impress this upon them. Thus a whole series of solemn rites spring up, different no doubt in every locality, but all having the same object and purpose. [And one can understand how the necessity of such initiations and second birth may easily have been itself felt in every race, at some stage of its evolution—and THAT quite as a spontaneous growth, and independently of any contagion of example caught from other races.]

The same may be said about the world-wide practice of the Eucharist. No more effective method exists for impressing on the members of a body their community of life with each other, and causing them to forget their jangling self-interests, than to hold a feast in common. It is a method which has been honored in all ages as well as to-day. But when the flesh partaken of at the feast is that of the Totem—the guardian and presiding genius of the tribe—or perhaps of one of its chief food-animals—then clearly the feast takes on a holy and solemn character. It becomes a sacrament of unity—of the unity of all with the tribe, and with each other. Self-interests and self-consciousness are for the time submerged, and the common life asserts itself; but here again we see that a custom like this would not come into being as a deliberate rite UNTIL self-consciousness and the divisions consequent thereon had grown to be an obvious evil. The herd-animals (cows, sheep, and so forth) do not have Eucharists, simply because they are sensible enough to feed along the same pastures without quarrelling over the richest tufts of grass.

When the flesh partaken of (either actually or symbolically) is not that of a divinized animal, but the flesh of a human-formed god—as in the mysteries of Dionysus or Osiris or Christ—then we are led to suspect (and of course this theory is widely held and supported) that the rites date from a very far-back period when a human being, as representative of the tribe, was actually slain, dismembered and partly devoured; though as time went on, the rite gradually became glossed over and mitigated into a love-communion through the sharing of bread and wine.

It is curious anyhow that the dismemberment or division into fragments of the body of a god (as in the case of Dionysus, Osiris, Attis, Prajapati and others) should be so frequent a tenet of the old religions, and so commonly associated with a love-feast of reconciliation and resurrection. It may be fairly interpreted as a symbol of Nature-dismem-

berment in Winter and resurrection in Spring; but we must also not forget that it may (and indeed must) have stood as an allegory of TRIBAL dismemberment and reconciliation—the tribe, conceived of as a divinity, having thus suffered and died through the inbreak of sin and the self-motive, and risen again into wholeness by the redemption of love and sacrifice. Whatever view the rank and file of the tribe may have taken of the matter, I think it is incontestable that the more thoughtful regarded these rites as full of mystic and spiritual meaning. It is of the nature, as I have said before, of these early symbols and ceremonies that they held so many meanings in solution; and it is this fact which gave them a poetic or creative quality, and their great hold upon the public mind.

I use the word “tribe” in many places here as a matter of convenience; not forgetting however that in some cases “clan” might be more appropriate, as referring to a section of a tribe; or “people” or “folk” as referring to unions of SEVERAL tribes. It is impossible of course to follow out all the gradations of organization from tribal up to national life; but it may be remembered that while animal totems prevail as a rule in the earlier stages, human-formed gods become more conspicuous in the later developments. All through, the practice of the Eucharist goes on, in varying forms adapting itself to the surrounding conditions; and where in the later societies a religion like Mithraism or Christianity includes people of very various race, the Rite loses quite naturally its tribal significance and becomes a celebration of allegiance to a particular god—of unity within a special Church, in fact. Ultimately it may become—as for a brief moment in the history of the early Christians it seemed likely to do—a celebration of allegiance to all Humanity, irrespective of race or creed or color of skin or of mind: though unfortunately that day seems still far distant and remains yet unrealized. It must not be overlooked, however, that the religion of the Persian Bab, first promulgated in 1845 to 1850—and a subject I shall deal with presently—had as a matter of fact this all embracing and universal scope.

To return to the Golden Age or Garden of Eden. Our conclusion seems to be that there really was such a period of comparative harmony in human life—to which later generations were justified in looking back, and looking back with regret. It corresponded in the psychology of human Evolution to stage One. The second stage was that of the Fall; and so one is inevitably led to the conjecture and the hope that a third stage will redeem the earth and its inhabitants to a condition of comparative blessedness.

X. THE SAVIOUR-GOD AND THE VIRGIN-MOTHER

From the consideration of the world-wide belief in a past Golden Age, and the world-wide practice of the Eucharist, in the sense indicated in the last chapter, to that of the equally widespread belief in a human-divine Saviour, is a brief and easy step. Some thirty years ago, dealing with this subject, I wrote as follows:—"The true Self of man consists in his organic relation with the whole body of his fellows; and when the man abandons his true Self he abandons also his true relation to his fellows. The mass-Man must rule in each unit-man, else the unit-man will drop off and die. But when the outer man tries to separate himself from the inner, the unit-man from the mass-Man, then the reign of individuality begins—a false and impossible individuality of course, but the only means of coming to the consciousness of the true individuality." And further, "Thus this divinity in each creature, being that which constitutes it and causes it to cohere together, was conceived of as that creature's saviour, healer—healer of wounds of body and wounds of heart—the Man within the man, whom it was not only possible to know, but whom to know and be united with was the alone salvation. This, I take it, was the law of health—and of holiness—as accepted at some elder time of human history, and by us seen as through a glass darkly."

I think it is impossible not to see—however much in our pride of Civilization (!) we like to jeer at the pettinesses of tribal life—that these elder people perceived as a matter of fact and direct consciousness the redeeming presence (within each unit-member of the group) of the larger life to which he belonged. This larger life was a reality—"a Presence to be felt and known"; and whether he called it by the name of a Totem-animal, or by the name of a Nature-divinity, or by the name of some gracious human-limbed God—some Hercules, Mithra, Attis, Orpheus, or what-not—or even by the great name of Humanity itself, it was still in any case the Saviour, the living incarnate Being by the realization of whose presence the little mortal could be lifted out of exile and error and death and suffering into splendor and life eternal.

It is impossible, I think, not to see that the myriad worship of "Saviours" all over the world, from China to Peru, can only be ascribed to the natural working of some such law of human and tribal psychology—from earliest times and in all races the same—springing up quite spontaneously and independently, and (so far) unaffected by the mere contagion of local tradition. To suppose that the Devil, long before the advent of Christianity, put the idea into the heads of all these earlier folk, is really to pay TOO great a compliment both to the power and the ingenuity of his Satanic Majesty—though the ingenuity with which the early Church DID itself suppress all information about these pre-Christian Saviours almost rivals that which it credited to Satan! And on the other hand to suppose this marvellous and universal consent of belief to have sprung by mere contagion from one accidental source would seem equally far-fetched and unlikely.

But almost more remarkable than the world-encircling belief in human-divine Saviours is the equally widespread legend of their birth from Virgin-mothers. There is hardly a god—as we have already had occasion to see—whose worship as a benefactor of mankind attained popularity in any of the four continents, Europe, Asia, Africa and America—who was not reported to have been born from a Virgin, or at least from a mother who owed the Child not to any earthly father, but to an impregnation from Heaven. And this seems at first sight all the more astonishing because the belief in the possibility of such a thing is so entirely out of the line of our modern thought. So that while it would seem not unnatural that such a legend should have, sprung up spontaneously in some odd benighted corner of the world, we find it very difficult to understand how in that case it should have spread so rapidly in every direction, or—if it did not spread—how we are to account for its SPONTANEOUS appearance in all these widely sundered regions.

I think here, and for the understanding of this problem, we are thrown back upon a very early age of human evolution—the age of Magic. Before any settled science or philosophy or religion existed, there were still certain Things—and consequently also certain Words—which had a tremendous influence on the human mind, which in fact affected it deeply. Such a word, for instance, is ‘Thunder’; to hear thunder, to imitate it, even to mention it, are sure ways of rousing superstitious attention and imagination. Such another word is ‘Serpent,’ another ‘Tree,’ and so forth. There is no one who is insensible to the reverberation of these and other such words and images; and among them, standing prominently out, are the two ‘Mother’ and ‘Virgin.’ The word Mother touches the deepest springs of human feeling. As the earliest word learnt and clung to by the child, it twines itself with the heart-strings of the man even to his latest day. Nor must we forget that in a primitive state of society (the Matriarchate) that influence was probably even greater than now; for the father of the child being (often as not) UNKNOWN the attachment to the mother was all the more intense and undivided. The word Mother had a magic about it which has remained even until to-day. But if that word rooted itself deep in the heart of the Child, the other word ‘virgin’ had an obvious magic for the full grown and sexually mature Man—a magic which it, too, has never lost.

There is ample evidence that one of the very earliest objects of human worship was the Earth itself, conceived of as the fertile Mother of all things. Gaia or Ge (the earth) had temples and altars in almost all the cities of Greece. Rhea or Cybele, sprung from the Earth, was “mother of all the gods.” Demeter (“earth mother”) was honored far and wide as the gracious patroness of the crops and vegetation. Ceres, of course, the same. Maia in the Indian mythology and Isis in the Egyptian are forms of Nature and the Earth-spirit, represented as female; and so forth. The Earth, in these ancient cults, was the mystic source of all life, and to it, as a propitiation, life of all kinds was sacrificed. [There are strange accounts of a huge fire being made, with an altar to Cybele in the midst, and of deer and fawns and wild animals, and birds and sheep and corn and fruits being thrown pell-mell into the flames.] It was, in a way, the most natural, as it seems to have been the earliest and most spontaneous of cults—the worship of the

Earth-mother, the all-producing eternal source of life, and on account of her never-failing ever-renewed fertility conceived of as an immortal Virgin.

But when the Saviour-legend sprang up—as indeed I think it must have sprung up, in tribe after tribe and people after people, independently—then, whether it sprang from the divinization of some actual man who showed the way of light and deliverance to his fellows “sitting in darkness,” or whether from the personification of the tribe itself as a god, in either case the question of the hero’s parentage was bound to arise. If the ‘saviour’ was plainly a personification of the tribe, it was obviously impossible to suppose him the son of a mortal mother. In that case—and if the tribe was generally traced in the legends to some primeval Animal or Mountain or thing of Nature—it was probably easy to think of him (the saviour) as, born out of Nature’s womb, descended perhaps from that pure Virgin of the World who is the Earth and Nature, who rules the skies at night, and stands in the changing phases of the Moon, and is worshiped (as we have seen) in the great constellation Virgo. If, on the other hand, he was the divinization of some actual man, more or less known either personally or by tradition to his fellows, then in all probability the name of his mortal mother would be recognized and accepted; but as to his father, that side of parentage being, as we have said, generally very uncertain, it would be easy to suppose some heavenly Annunciation, the midnight visit of a God, and what is usually termed a Virgin-birth.

There are two elements to be remembered here, as conspiring to this conclusion. One is the condition of affairs in a remote matriarchial period, when descent was reckoned always through the maternal line, and the fatherhood in each generation was obscure or unknown or commonly left out of account; and the other is the fact—so strange and difficult for us to realize—that among some very primitive peoples, like the Australian aborigines, the necessity for a woman to have intercourse with a male, in order to bring about conception and child-birth, was actually not recognized. Scientific observation had not always got as far as that, and the matter was still under the domain of Magic! A Virgin-Mother was therefore a quite imaginable (not to say ‘conceivable’) thing; and indeed a very beautiful and fascinating thing, combining in one image the potent magic of two very wonderful words. It does not seem impossible that considerations of this kind led to the adoption of the doctrine or legend of the virgin-mother and the heavenly father among so many races and in so many localities—even without any contagion of tradition among them.

Anyhow, and as a matter of fact, the world-wide dissemination of the legend is most remarkable. Zeus, Father of the gods, visited Semele, it will be remembered, in the form of a thunderstorm; and she gave birth to the great saviour and deliverer Dionysus. Zeus, again, impregnated Danae in a shower of gold; and the child was Perseus, who slew the Gorgons (the powers of darkness) and saved Andromeda (the human soul). Devaki, the radiant Virgin of the Hindu mythology, became the wife of the god Vishnu and bore Krishna, the beloved hero and prototype of Christ. With regard to Buddha St. Jerome says “It is handed down among the Gymnosophists, of India that Buddha, the founder of their system, was brought forth by a Virgin from her side.” The

Egyptian Isis, with the child Horus, on her knee, was honored centuries before the Christian era, and worshiped under the names of "Our Lady," "Queen of Heaven," "Star of the Sea," "Mother of God," and so forth. Before her, Neith, the Virgin of the World, whose figure bends from the sky over the earthly plains and the children of men, was acclaimed as mother of the great god Osiris. The saviour Mithra, too, was born of a Virgin, as we have had occasion to notice before; and on the Mithraic monuments the mother suckling her child is a not uncommon figure.

The old Teutonic goddess Hertha (the Earth) was a Virgin, but was impregnated by the heavenly Spirit (the Sky); and her image with a child in her arms was to be seen in the sacred groves of Germany. The Scandinavian Frigga, in much the same way, being caught in the embraces of Odin, the All-father, conceived and bore a son, the blessed Balder, healer and saviour of mankind. Quetzalcoatl, the (crucified) saviour of the Aztecs, was the son of Chimalman, the Virgin Queen of Heaven. Even the Chinese had a mother-goddess and virgin with child in her arms; and the ancient Etruscans the same.

Finally, we have the curiously large number of BLACK virgin mothers who are or have been worshiped. Not only cases like Devaki the Indian goddess, or Isis the Egyptian, who would naturally appear black-skinned or dark; but the large number of images and paintings of the same kind, yet extant—especially in the Italian churches—and passing for representations of Mary and the infant Jesus. Such are the well-known image in the chapel at Loretto, and images and paintings besides in the churches at Genoa, Pisa, Padua, Munich and other places. It is difficult not to regard these as very old Pagan or pre-Christian relics which lingered on into Christian times and were baptized anew—as indeed we know many relics and images actually were—into the service of the Church. "Great is Diana of the Ephesians"; and there is I believe more than one black figure extant of this Diana, who, though of course a virgin, is represented with innumerable breasts—not unlike some of the archaic statues of Artemis and Isis. At Paris, far on into Christian times there was, it is said, on the site of the present Cathedral of Notre Dame, a Temple dedicated to 'our Lady' Isis; and images belonging to the earlier shrine would in all probability be preserved with altered name in the later.

All this illustrates not only the wide diffusion of the doctrine of the Virgin-mother, but its extreme antiquity. The subject is obscure, and worthy of more consideration than has yet been accorded it; and I do not feel able to add anything to the tentative explanations given a page or two back, except perhaps to suppose that the vision of the Perfect Man hovered dimly over the mind of the human race on its first emergence from the purely animal stage; and that a quite natural speculation with regard to such a being was that he would be born from a Perfect Woman—who according to early ideas would necessarily be the Virgin Earth itself, mother of all things. Anyhow it was a wonderful Intuition, slumbering as it would seem in the breast of early man, that the Great Earth after giving birth to all living creatures would at last bring forth a Child who should become the Saviour of the human race.

There is of course the further theory, entertained by some, that virgin-parturition—a kind of Parthenogenesis—has as a matter of fact occasionally occurred among mortal women, and even still does occur. I should be the last to deny the POSSIBILITY of this (or of anything else in Nature), but, seeing the immense difficulties in the way of PROOF of any such asserted case, and the absence so far of any thoroughly attested and verified instance, it would, I think, be advisable to leave this theory out of account at present.

But whether any of the EXPLANATIONS spoken of are right or wrong, and whatever explanation we adopt, there remains the FACT of the universality over the world of this legend—affording another instance of the practical solidarity and continuity of the Pagan Creeds with Christianity.

XI. RITUAL DANCING

It is unnecessary to labor the conclusion of the last two or three chapters, namely that Christianity grew out of the former Pagan Creeds and is in its general outlook and origins continuous and of one piece with them. I have not attempted to bring together ALL the evidence in favor of this contention, as such work would be too vast, but more illustrations of its truth will doubtless occur to readers, or will emerge as we proceed.

I think we may take it as proved (1) that from the earliest ages, and before History, a great body of religious belief and ritual—first appearing among very primitive and unformed folk, whom we should call ‘savages’—has come slowly down, broadening and differentiating itself on the way into a great variety of forms, but embodying always certain main ideas which became in time the accepted doctrines of the later Churches—the Indian, the Egyptian, the Mithraic, the Christian, and so forth. What these ideas in their general outline have been we can perhaps best judge from our “Apostles’ Creed,” as it is recited every Sunday in our churches.

“I believe in God the Father Almighty, Maker of heaven and earth: And in Jesus Christ his only Son our Lord, who was conceived by the Holy Ghost, born of the Virgin Mary, suffered under Pontius Pilate, was crucified, dead and buried. He descended into Hell; the third day he rose again from the dead, He ascended into heaven, and sitteth on the right hand of God the Father Almighty; from thence he shall come to judge the quick and the dead. I believe in the Holy Ghost; the holy Catholic Church; the communion of Saints; the Forgiveness of sins; the Resurrection of the body, and the life everlasting. Amen.”

Here we have the All-Father and Creator, descending from the Sky in the form of a spirit to impregnate the earthly Virgin-mother, who thus gives birth to a Saviour-hero. The latter is slain by the powers of Evil, is buried and descends into the lower world, but arises again as God into heaven and becomes the leader and judge of mankind. We have the confirmation of the Church (or, in earlier times, of the Tribe) by means of a Eucharist or Communion which binds together all the members, living or dead, and restores errant individuals through the Sacrifice of the hero and the Forgiveness of their sins; and we have the belief in a bodily Resurrection and continued life of the members within the fold of the Church (or Tribe), itself regarded as eternal.

One has only, instead of the word ‘Jesus,’ to read Dionysus or Krishna or Hercules or Osiris or Attis, and instead of ‘Mary’ to insert Semele or Devaki or Alcmene or Neith or Nana, and for Pontius Pilate to use the name of any terrestrial tyrant who comes into the corresponding story, and lo! the creed fits in all particulars into the rites and worship of a pagan god. I need not enlarge upon a thesis which is self-evident from all that has gone before. I do not say, of course, that ALL the religious beliefs of Paganism are included and summarized in our Apostles’ Creed, for—as I shall have occasion to note in the next chapter—I think some very important religious elements are there OMITTED; but I do think that all the beliefs which ARE summarized in the said creed had

already been fully represented and elaborately expressed in the non-Christian religions and rituals of Paganism.

Further (2) I think we may safely say that there is no certain proof that the body of beliefs just mentioned sprang from any one particular centre far back and radiated thence by dissemination and mental contagion over the rest of the world; but the evidence rather shows that these beliefs were, for the most part, the SPONTANEOUS outgrowths (in various localities) of the human mind at certain stages of its evolution; that they appeared, in the different races and peoples, at different periods according to the degree of evolution, and were largely independent of intercourse and contagion, though of course, in cases, considerably influenced by it; and that one great and all-important occasion and provocative of these beliefs was actually the RISE OF SELF-CONSCIOUSNESS—that is, the coming of the mind to a more or less distinct awareness of itself and of its own operation, and the consequent development and growth of Individualism, and of the Self-centred attitude in human thought and action.

In the third place (3) I think we may see—and this is the special subject of the present chapter—that at a very early period, when humanity was hardly capable of systematic expression in what we call Philosophy or Science, it could not well rise to an ordered and literary expression of its beliefs, such as we find in the later religions and the ‘Churches’ (Babylonian, Jewish, East Indian, Christian, or what-not), and yet that it FELT these beliefs very intensely and was urged, almost compelled, to their utterance in some form or other. And so it came about that people expressed themselves in a vast mass of ritual and myth—customs, ceremonies, legends, stories—which on account of their popular and concrete form were handed down for generations, and some of which linger on still in the midst of our modern civilization. These rituals and legends were, many of them, absurd enough, rambling and childish in character, and preposterous in conception, yet they gave the expression needed; and some of them of course, as we have seen, were full of meaning and suggestion.

A critical and commercial Civilization, such as ours, in which (notwithstanding much TALK about Art) the artistic sense is greatly lacking, or at any rate but little diffused, does not as a rule understand that poetic RITES, in the evolution of peoples, came naturally before anything like ordered poems or philosophy or systematized VIEWS about life and religion—such as WE love to wallow in! Things were FELT before they were spoken. The loading of diseases into disease-boats, of sins onto scape-goats, the propitiation of the forces of nature by victims, human or animal, sacrifices, ceremonies of re-birth, eucharistic feasts, sexual communions, orgiastic celebrations of the common life, and a host of other things—all SAID plainly enough what was meant, but not in WORDS. Partly no doubt it was that at some early time words were more difficult of command and less flexible in use than actions (and at all times are they not less expressive?). Partly it was that mankind was in the child-stage. The Child delights in ritual, in symbol, in expression through material objects and actions:

See, at his feet some little plan or chart,
Some fragment from his dream of human life,
Shaped by himself with newly learned art;
A wedding or a festival,
A mourning or a funeral;
And this hath now his heart.

And primitive man in the child-stage felt a positive joy in ritual celebrations, and indulged in expressions which we but little understand; for these had then his heart.

One of the most pregnant of these expressions was DANCING. Children dance instinctively. They dance with rage; they dance with joy, with sheer vitality; they dance with pain, or sometimes with savage glee at the suffering of others; they delight in mimic combats, or in animal plays and disguises. There are such things as Courting-dances, when the mature male and female go through a ritual together—not only in civilized ball-rooms and the back-parlors of inns, but in the farmyards where the rooster pays his addresses to the hen, or the yearling bull to the cow—with quite recognized formalities; there are elaborate ceremonials performed by the Australian bower-birds and many other animals. All these things—at any rate in children and animals—come before speech; and anyhow we may say that LOVE-RITES, even in mature and civilized man, hardly ADMIT of speech. Words only vulgarize love and blunt its edge.

So Dance to the savage and the early man was not merely an amusement or a gymnastic exercise (as the books often try to make out), but it was also a serious and intimate part of life, an expression of religion and the relation of man to non-human Powers. Imagine a young dancer—and the admitted age for ritual dancing was commonly from about eighteen to thirty—coming forward on the dancing-ground or platform for the INVOCATION OF RAIN. We have unfortunately no kinematic records, but it is not impossible or very difficult to imagine the various gestures and movements which might be considered appropriate to such a rite in different localities or among different peoples. A modern student of Dalcroze Eurhythmics would find the problem easy. After a time a certain ritual dance (for rain) would become stereotyped and generally adopted. Or imagine a young Greek leading an invocation to Apollo to STAY SOME PLAGUE which was ravaging the country. He might as well be accompanied by a small body of co-dancers; but he would be the leader and chief representative. Or it might be a WAR-DANCE—as a more or less magical preparation for the raid or foray. We are familiar enough with accounts of war-dances among American Indians. C. O. Muller in his *History and Antiquities of the Doric Race* gives the following account of the Pyrrhic dance among the Greeks, which was danced in full armor:—"Plato says that it imitated all the attitudes of defence, by avoiding a thrust or a cast, retreating, springing up, and crouching—as also the opposite movements of attack with arrows and lances, and also of every kind of thrust. So strong was the attachment to this dance at Sparta that, long after it had in the other Greek states degenerated into a Bacchanalian revel, it was still danced by the Spartans as a warlike exercise, and boys of fifteen were instructed in it." Of the Hunting-dance I have already given instances. It

always had the character of Magic about it, by which the game or quarry might presumably be influenced; and it can easily be understood that if the Hunt was not successful the blame might well be attributed to some neglect of the usual ritual mimes or movements—no laughing matter for the leader of the dance.

Or there were dances belonging to the ceremonies of Initiation—dances both by the initiators and the initiated. Jane E. Harrison in *Themis* (p. 24) says, "Instruction among savage peoples is always imparted in more or less mimetic dances. At initiation you learn certain dances which confer on you definite social status. When a man is too old to dance, he hands over his dance to another and a younger, and he then among some tribes ceases to exist socially. . . . The dances taught to boys at initiation are frequently if not always ARMED dances. These are not necessarily warlike. The accoutrement of spear and shield was in part decorative, in part a provision for making the necessary hubbub." (Here Miss Harrison reproduces a photograph of an Initiation dance among the Akikuyu of British East Africa.) The Initiation-dances blend insensibly and naturally with the Mystery and Religion dances, for indeed initiation was for the most part an instruction in the mysteries and social rites of the Tribe. They were the expression of things which would be hard even for us, and which for rude folk would be impossible, to put into definite words. Hence arose the expression—whose meaning has been much discussed by the learned—"to dance out a mystery." Lucian, in a much-quoted passage, observes: "You cannot find a single ancient mystery in which there is not dancing . . . and this much all men know, that most people say of the revealers of the mysteries that they 'dance them out.'" Andrew Lang, commenting on this passage, continues: "Clement of Alexandria uses the same term when speaking of his own 'appalling revelations.' So closely connected are mysteries with dancing among savages that when Mr. Orpen asked Qing, the Bushman hunter, about some doctrines in which Qing was not initiated, he said: 'Only the initiated men of that dance know these things.' To 'dance' this or that means to be acquainted with this or that myth, which is represented in a dance or ballet d'action. So widely distributed is the practice that Acosta in an interesting passage mentions it as familiar to the people of Peru before and after the Spanish conquest." [And we may say that when the 'mysteries' are of a sexual nature it can easily be understood that to 'dance them out' is the only way of explaining them!]

Thus we begin to appreciate the serious nature and the importance of the dance among primitive folk. To dub a youth "a good dancer" is to pay him a great compliment. Among the well-known inscriptions on the rocks in the island of Thera in the Aegean sea there are many which record in deeply graven letters the friendship and devotion to each other of Spartan warrior-comrades; it seems strange at first to find how often such an epithet of praise occurs as Bathycles DANCES WELL, Eumelos is a PERFECT DANCER. One hardly in general expects one warrior to praise another for his dancing! But when one realizes what is really meant—namely the fitness of the loved comrade to lead in religious and magical rituals—then indeed the compliment takes on a new complexion. Religious dances, in dedication to a god, have of course been honored in every country. Muller, in the work just cited, describes a lively dance called the

hyporchema which, accompanied by songs, was used in the worship of Apollo. "In this, besides the chorus of singers who usually danced around THE BLAZING ALTAR, several persons were appointed to accompany the action of the poem with an appropriate pantomimic display." It was probably some similar dance which is recorded in Exodus, ch. xxxii, when Aaron made the Israelites a golden Calf (image of the Egyptian Apis). There was an altar and a fire and burnt offerings for sacrifice, and the people dancing around. Whether in the Apollo ritual the dancers were naked I cannot say, but in the affair of the golden Calf they evidently were, for it will be remembered that it was just this which upset Moses' equanimity so badly—"when he SAW THAT THE PEOPLE WERE NAKED"—and led to the breaking of the two tables of stone and the slaughter of some thousands of folk. It will be remembered also that David on a sacrificial occasion danced naked before the Lord.

It may seem strange that dances in honor of a god should be held naked; but there is abundant evidence that this was frequently the case, and it leads to an interesting speculation. Many of these rituals undoubtedly owed their sanctity and solemnity to their extreme antiquity. They came down in fact from very far back times when the average man or woman—as in some of the Central African tribes to-day—wore simply nothing at all; and like all religious ceremonies they tended to preserve their forms long after surrounding customs and conditions had altered. Consequently nakedness lingered on in sacrificial and other rites into periods when in ordinary life it had come to be abandoned or thought indecent and shameful. This comes out very clearly in both instances above—quoted from the Bible. For in Exodus xxxii. 25 it is said that "Aaron had made them (the dancers) naked UNTO THEIR SHAME among their enemies (READ opponents)," and in 2 Sam. vi. 20 we are told that Michal came out and sarcastically rebuked the "glorious king of Israel" for "shamelessly uncovering himself, like a vain fellow" (for which rebuke, I am sorry to say, David took a mean revenge on Michal). In both cases evidently custom had so far changed that to a considerable section of the population these naked exhibitions had become indecent, though as parts of an acknowledged ritual they were still retained and supported by others. The same conclusion may be derived from the commands recorded in Exodus xx. 26 and xxviii. 42, that the priests be not "uncovered" before the altar—commands which would hardly have been needed had not the practice been in vogue.

Then there were dances (partly magical or religious) performed at rustic and agricultural festivals, like the Epilenios, celebrated in Greece at the gathering of the grapes. Of such a dance we get a glimpse in the Bible (Judges xxi. 20) when the elders advised the children of Benjamin to go out and lie in wait in the vineyards, at the time of the yearly feast; and "when the daughters of Shiloh come out to dance in the dances, then come ye out of the vineyards and catch you every man a wife from the daughters of Shiloh"—a touching example apparently of early so-called 'marriage by capture'! Or there were dances, also partly or originally religious, of a quite orgiastic and Bacchanalian character, like the Bryalicha performed in Sparta by men and women in hideous masks, or the Deimalea by Sileni and Satyrs waltzing in a circle; or the Bibasis carried out by both men and women—a quite gymnastic exercise in which the perform-

ers took a special pride in striking their own buttocks with their heels! or others wilder still, which it would perhaps not be convenient to describe.

We must see how important a part Dancing played in that great panorama of Ritual and Religion (spoken of in the last chapter) which, having originally been led up to by the 'Fall of Man,' has ever since the dawn of history gradually overspread the world with its strange procession of demons and deities, and its symbolic representations of human destiny. When it is remembered that ritual dancing was the matrix out of which the Drama sprang, and further that the drama in its inception (as still to-day in India) was an affair of religion and was acted in, or in connection with, the Temples, it becomes easier to understand how all this mass of ceremonial sacrifices, expiations, initiations, Sun and Nature festivals, eucharistic and orgiastic communions and celebrations, mystery-plays, dramatic representations, myths and legends, etc., which I have touched upon in the preceding chapters—together with all the emotions, the desires, the fears, the yearnings and the wonderment which they represented—have practically sprung from the same root: a root deep and necessary in the psychology of Man. Presently I hope to show that they will all practically converge again in the end to one meaning, and prepare the way for one great Synthesis to come—an evolution also necessary and inevitable in human psychology.

In that truly inspired Ode from which I quoted a few pages back, occur those well-known words whose repetition now will, on account of their beauty, I am sure be excused:—

Our birth is but a sleep and a forgetting:
The Soul that rises with us, our life's Star,
Hath had elsewhere its setting,
And cometh from afar;
Not in entire forgetfulness,
And not in utter nakedness,
But trailing clouds of glory do we come
From God, who is our home:
Heaven lies about us in our infancy!
Shades of the prison-house begin to close
Upon the growing Boy,
But He beholds the light and whence it flows
He sees it in his joy;
The youth who daily farther from the east
Must travel, still is Nature's Priest,
And by the vision splendid
Is on his way attended;
At length the man perceives it die away
And fade into the light of common day.

Wordsworth—though he had not the inestimable advantage of a nineteenth-century education and the inheritance of the Darwinian philosophy—does nevertheless put the matter of the Genius of the Child in a way which (with the alteration of a few conventional terms) we scientific moderns are quite inclined to accept. We all admit now that the Child does not come into the world with a mental tabula rasa of entire forgetfulness but on the contrary as the possessor of vast stores of sub-conscious memory, derived from its ancestral inheritances; we all admit that a certain grace and intuitive insight and even prophetic quality, in the child-nature, are due to the harmonization of these racial inheritances in the infant, even before it is born; and that after birth the impact of the outer world serves rather to break up and disintegrate this harmony than to confirm and strengthen it. Some psychologists indeed nowadays go so far as to maintain that the child is not only 'Father of the man,' but superior to the man, and that Boyhood and Youth and Maturity are attained to not by any addition but by a process of loss and subtraction. It will be seen that the last ten lines of the above quotation rather favor this view.

But my object in making the quotation was not to insist on the truth of its application to the individual Child, but rather to point out the remarkable way in which it illustrates what I have said about the Childhood of the Race. In fact, if the quotation be read over again with this interpretation (which I do not say Wordsworth intended) that the 'birth' spoken of is the birth or evolution of the distinctively self-conscious Man from the Animals and the animal-natured, unself-conscious human beings of a preceding age, then the parable unfolds itself perfectly naturally and convincingly. THAT birth certainly was sleep and a forgetting; the grace and intuition and instinctive perfection of the animals was lost. But the forgetfulness was not entire; the memory lingered long of an age of harmony, of an Eden-garden left behind. And trailing clouds of this remembrance the first tribal men, on the edge of but not yet WITHIN the civilization-period, appear in the dawn of History.

As I have said before, the period of the dawn of Self-consciousness was also the period of the dawn of the practical and inquiring Intellect; it was the period of the babyhood of both; and so we perceive among these early people (as we also do among children) that while in the main the heart and the intuitions were right, the intellect was for a long period futile and rambling to a degree. As soon as the mind left the ancient bases of instinct and sub-conscious racial experience it fell into a hopeless bog, out of which it only slowly climbed by means of the painfully-gathered stepping-stones of logic and what we call Science. "Heaven lies about us in our infancy." Wordsworth perceived that wonderful world of inner experience and glory out of which the child emerges; and some even of us may perceive that similar world in which the untampered animals STILL dwell, and OUT of which self-regarding Man in the history of the race was long ago driven. But a curse went with the exile. As the Brain grew, the Heart withered. The inherited instincts and racially accumulated wisdom, on which the first men thrived and by means of which they achieved a kind of temporary Paradise, were broken up; delusions and disease and dissension set in. Cain turned upon his brother and slew him; and the shades of the prison-house began to close. The growing Boy, however, (by

whom we may understand the early tribes of Mankind) had yet a radiance of Light and joy in his life; and the Youth—though travelling daily farther from the East—still remained Nature's priest, and by the vision splendid was on his way attended: but

At length the Man perceived it die away.
And fade into the light of common day.

What a strangely apt picture in a few words (if we like to take it so) of the long pilgrimage of the Human Race, its early and pathetic clinging to the tradition of the Eden-garden, its careless and vigorous boyhood, its meditative youth, with consciousness of sin and endless expiatory ritual in Nature's bosom, its fleeting visions of salvation, and finally its complete disillusionment and despair in the world-slaughter and unbelief of the twentieth century!

Leaving Wordsworth, however, and coming back to our main line of thought, we may point out that while early peoples were intellectually mere babies—with their endless yarns about heroes on horseback leaping over wide rivers or clouds of monks flying for hundreds of miles through the air, and their utter failure to understand the general concatenations of cause and effect—yet practically and in their instinct of life and destiny they were, as I have already said, by no means fools; certainly not such fools as many of the arm-chair students of these things delight to represent them. For just as, a few years ago, we modern civilizees studying outlying nations, the Chinese for instance, rejoiced (in our vanity) to pick out every quaint peculiarity and absurdity and monstrosity of a supposed topsyturvydom, and failed entirely to see the real picture of a great and eminently sensible people; so in the case of primitive men we have been, and even still are, far too prone to catalogue their cruelties and obscenities and idiotic superstitions, and to miss the sane and balanced setting of their actual lives.

Mr. R. R. Marett, who has a good practical acquaintance with his subject, had in the Hibbert Journal for October 1918 an article on "The Primitive Medicine Man" in which he shows that the latter is as a rule anything but a fool and a knave—although like 'medicals' in all ages he hocuspocuses his patients occasionally! He instances the medicine-man's excellent management, in most cases, of childbirth, or of wounds and fractures, or his primeval skill in trepanning or trephining—all of which operations, he admits, may be accompanied with grotesque and superstitious ceremonies, yet show real perception and ability. We all know—though I think the article does not mention the matter—what a considerable list there is of drugs and herbs which the modern art of healing owes to the ancient medicine-man, and it may be again mentioned that one of the most up-to-date treatments—the use of a prolonged and exclusive diet of MILK as a means of giving the organism a new start in severe cases—has really come down to us through the ages from this early source. The real medicine-man, Mr. Marett says, is largely a 'faith-healer' and 'soul-doctor'; he believes in his vocation, and undergoes much for the sake of it: "The main point is to grasp that by his special initiation and the rigid taboos which he practises—not to speak of occasional remarkable gifts, say of trance and ecstasy, which he may inherit by nature and have improved by art—he HAS

access to a wonder-working power. . . . And the great need of primitive folk is for this healer of souls.” Our author further insists on the enormous play and influence of Fear in the savage mind—a point we have touched on already—and gives instances of Thanatomania, or cases where, after a quite slight and superficial wound, the patient becomes so depressed that he, quite needlessly, persists in dying! Such cases, obviously, can only be countered by Faith, or something (whatever it may be) which restores courage, hope and energy to the mind. Nor need I point out that the situation is exactly the same among a vast number of ‘patients’ to-day. As to the value, in his degree, of the medicine-man many modern observers and students quite agree with the above. Also as the present chapter is on Ritual Dancing it may not be out of place to call attention to the supposed healing of sick people in Ceylon and other places by Devil-dancing—the enormous output of energy and noise in the ritual possibly having the effect of reanimating the patient (if it does not kill him), or of expelling the disease from his organism.

With regard to the practical intelligence of primitive peoples, derived from their close contact with life and nature, Bishop Colenso’s experiences among the Zulus may appropriately be remembered. When expounding the Bible to these supposedly backward ‘niggers’ he was met at all points by practical interrogations and arguments which he was perfectly unable to answer—especially over the recorded passage of the Red Sea by the Israelites in a single night. From the statistics given in the Sacred Book these naughty savages proved to him absolutely conclusively that the numbers of fugitives were such that even supposing them to have marched—men, women and children—FIVE ABREAST and in close order, they would have formed a column 100 miles long, and this not including the baggage, sheep and cattle! Of course the feat was absolutely impossible. They could not have passed the Red Sea in a night or a week of nights.

But the sequel is still more amusing and instructive. Colenso, in his innocent sincerity, took the side of the Zulus, and feeling sure the Church at home would be quite glad to have its views with regard to the accuracy of Bible statistics corrected, wrote a book embodying the amendments needed. Modest as his criticisms were, they raised a STORM of protest and angry denunciation, which even led to his deposition for the time being from his bishopric! While at the same time an avalanche of books to oppose his heresy poured forth from the press. Lately I had the curiosity to look through the British Museum catalogue and found that in refutation of Colenso’s Pentateuch Examined some 140 (a hundred and forty) volumes were at that time published! To-day, I need hardly say, all these arm-chair critics and their works have sunk into utter obscurity, but the arguments of the Zulus and their Bishop still stand unmoved and immovable.

This is a case of searching intelligence shown by ‘savages,’ an intelligence founded on intimate knowledge of the needs of actual life. I think we may say that a, similarly instinctive intelligence (sub-conscious if you like) has guided the tribes of men on the whole in their long passage through the Red Sea of the centuries, from those first days

of which I speak even down to the present age, and has in some strange, even if fitful, way kept them along the path of that final emancipation towards which Humanity is inevitably moving.

XII. THE SEX-TABOO

In the course of the last few chapters I have spoken more than once of the solidarity and continuity of Christianity, in its essential doctrines, with the Pagan rites. There is, however, one notable exception to this statement. I refer of course to Christianity's treatment of Sex. It is certainly very remarkable that while the Pagan cults generally made a great deal of all sorts of sex-rites, laid much stress upon them, and introduced them in what we consider an unblushing and shameless way into the instincts connected with it. I say 'the Christian Church,' on the whole took quite the opposite line—ignored sex, condemned it, and did much despite to the perfectly natural instincts connected with it. I say 'the Christian Church,' because there is nothing to show that Jesus himself (if we admit his figure as historical) adopted any such extreme or doctrinaire attitude; and the quite early Christian teachers (with the chief exception of Paul) do not exhibit this bias to any great degree. In fact, as is well known, strong currents of pagan usage and belief ran through the Christian assemblies of the first three or four centuries. "The Christian art of this period remained delightfully pagan. In the catacombs we see the Saviour as a beardless youth, like a young Greek god; sometimes represented, like Hermes the guardian of the flocks, bearing a ram or lamb round his neck; sometimes as Orpheus tuning his lute among the wild animals." The followers of Jesus were at times even accused—whether rightly or wrongly I know not—of celebrating sexual mysteries at their love-feasts. But as the Church through the centuries grew in power and scope—with its monks and their mutilations and asceticisms, and its celibate clergy, and its absolute refusal to recognize the sexual meaning of its own acclaimed symbols (like the Cross, the three fingers of Benediction, the Fleur de Lys and so forth)—it more and more consistently defined itself as anti-sexual in its outlook, and stood out in that way in marked contrast to the earlier Nature-religions.

It may be said of course that this anti-sexual tendency can be traced in other of the pre-Christian Churches, especially the later ones, like the Buddhist, the Egyptian, and so forth; and this is perfectly true; but it would seem that in many ways the Christian Church marked the culmination of the tendency; and the fact that other cults participated in the taboo makes us all the more ready and anxious to inquire into its real cause.

To go into a disquisition on the Sex-rites of the various pre-Christian religions would be 'a large order'—larger than I could attempt to fill; but the general facts in this connection are fairly patent. We know, of course, from the Bible that the Syrians in Palestine were given to sexual worships. There were erect images (phallic) and "groves" (sexual symbols) on every high hill and under every green tree; and these same images and the rites connected with them crept into the Jewish Temple and were popular enough to maintain their footing there for a long period from King Rehoboam onwards, notwithstanding the efforts of Josiah and other reformers to extirpate them. Moreover there were girls and men (hierodouloi) regularly attached during this period to the Jewish Temple as to the heathen Temples, for the rendering of sexual services, which were recognized in many cases as part of the ritual. Women were persuaded that it was an honor and a privilege to be fertilized by a 'holy man' (a priest or other man connected

with the rites), and children resulting from such unions were often called “Children of God”—an appellation which no doubt sometimes led to a legend of miraculous birth! Girls who took their place as hierodouloi in the Temple or Temple-precincts were expected to surrender themselves to men-worshippers in the Temple, much in the same way, probably, as Herodotus describes in the temple of the Babylonian Venus Mylitta, where every native woman, once in her life, was supposed to sit in the Temple and have intercourse with some stranger. Indeed the Syrian and Jewish rites dated largely from Babylonia. “The Hebrews entering Syria,” says Richard Burton “found it religionized, by Assyria and Babylonia, when the Accadian Ishtar had passed West, and had become Ashtoreth, Ashtaroth, or Ashirah, the Anaitis of Armenia, the Phoenician Astarte, and the Greek Aphrodite, the great Moon-goddess who is queen of Heaven and Love.” The word translated “grove” as above, in our Bible, is in fact Asherah, which connects it pretty clearly with the Babylonian Queen of Heaven.

In India again, in connection with the Hindu Temples and their rites, we have exactly the same institution of girls attached to the Temple service—the Nautch-girls—whose functions in past times were certainly sexual, and whose dances in honor of the god are, even down to the present day, decidedly amatory in character. Then we have the very numerous lingams (conventional representations of the male organ) to be seen, scores and scores of them, in the arcades and cloisters of the Hindu Temples—to which women of all classes, especially those who wish to become mothers, resort, anointing them copiously with oil, and signaling their respect and devotion to them in a very practical way. As to the lingam as representing the male organ, in some form or other—as upright stone or pillar or obelisk or slender round tower—it occurs all over the world, notably in Ireland, and forms such a memorial of the adoration paid by early folk to the great emblem and instrument of human fertility, as cannot be mistaken. The pillars set up by Solomon in front of his temple were obviously from their names—Jachin and Boaz—meant to be emblems of this kind; and the fact that they were crowned with pomegranates—the universally accepted symbol of the female—confirms and clinches this interpretation. The obelisks before the Egyptians’ temples were signs of the same character. The well-known T-shaped cross was in use in pagan lands long before Christianity, as a representation of the male member, and also at the same time of the ‘tree’ on which the god (Attis or Adonis or Krishna or whoever it might be) was crucified; and the same symbol combined with the oval (or yoni) formed THE Crux Ansata {Ankh} of the old Egyptian ritual—a figure which is to-day sold in Cairo as a potent charm, and confessedly indicates the conjunction of the two sexes in one design. MacLennan in *The Fortnightly Review* (Oct. 1869) quotes with approval the words of Sanchoniathon, as saying that “men first worship plants, next the heavenly bodies, supposed to be animals, then ‘pillars’ (emblems of the Procreator), and last, the anthropomorphic gods.

It is not necessary to enlarge on this subject. The facts of the connection of sexual rites with religious services nearly everywhere in the early world are, as I say, sufficiently patent to every inquirer. But it IS necessary to try to understand the rationale of this connection. To dispatch all such cases under the mere term “religious prostitution”

is no explanation. The term suggests, of course, that the plea of religion was used simply as an excuse and a cover for sexual familiarities; but though this kind of explanation commends itself, no doubt, to the modern man—whose religion is as commercial as his sex-relationships are—and though in CASES no doubt it was a true explanation—yet it is obvious that among people who took religion seriously, as a matter of life and death and who did not need hypocritical excuses or covers for sex-relationships, it cannot be accepted as in general the RIGHT explanation. No, the real explanation is—and I will return to this presently—that sexual relationships are so deep and intimate a part of human nature that from the first it has been simply impossible to keep them OUT of religion—it being of course the object of religion to bring the whole human being into some intelligible relation with the physical, moral, and if you like supernatural order of the great world around him. Sex was felt from the first to be part, and a foundational part, of the great order of the world and of human nature; and therefore to separate it from Religion was unthinkable and a kind of contradiction in terms.

If that is true—it will be asked—how was it that that divorce DID take place—that the taboo did arise? How was it that the Jews, under the influence of Josiah and the Hebrew prophets, turned their faces away from sex and strenuously opposed the Syrian cults? How was it that this reaction extended into Christianity and became even more definite in the Christian Church—that monks went by thousands into the deserts of the Thebaid, and that the early Fathers and Christian apologists could not find terms foul enough to hurl at Woman as the symbol (to them) of nothing but sex-corruption and delusion? How was it that this contempt of the body and degradation of sex-things went on far into the Middle Ages of Europe, and ultimately created an organized system of hypocrisy, and concealment and suppression of sex-instincts, which, acting as cover to a vile commercial Prostitution and as a breeding ground for horrible Disease, has lasted on even to the edge of the present day?

This is a fair question, and one which demands an answer. There must have been a reason, and a deep-rooted one, for this remarkable reaction and volte-face which has characterized Christianity, and, perhaps to a lesser degree, other both earlier and later cults like those of the Buddhists, the Egyptians, the Aztecs, and so forth.

It may be said—and this is a fair answer on the SURFACE of the problem—that the main reason WAS something in the nature of a reaction. The excesses and corruptions of sex in Syria had evidently become pretty bad, and that very fact may have led to a pendulum-swing of the Jewish Church in the opposite direction; and again in the same way the general laxity of morals in the decay of the Roman empire may have confirmed the Church of early Christendom in its determination to keep along the great high road of asceticism. The Christian followed on the Jewish and Egyptian Churches, and in this way a great tradition of sexual continence and anti-pagan morality came right down the centuries even into modern times.

This seems so far a reasonable theory; but I think we shall go farther and get nearer the heart of the problem if we revert to the general clue which I have followed already more than once—the clue of the necessary evolution of human Consciousness. In the first or animal stage of human evolution, Sex was (as among the animals) a perfectly necessary, instinctive and unself-conscious activity. It was harmonious with itself, natural, and unproductive of evil. But when the second stage set in, in which man became preponderantly SELF-conscious, he inevitably set about deflecting sex-activities to his own private pleasure and advantage; he employed his budding intellect in scheming the derailment of passion and desire from tribal needs and, Nature's uses to the poor details of his own gratification. If the first stage of harmonious sex-instinct and activity may be held as characteristic of the Golden Age, the second stage must be taken to represent the Fall of man and his expulsion from Paradise in the Garden of Eden story. The pleasure and glory of Sex having been turned to self-purposes, Sex itself became the great Sin. A sense of guilt overspread man's thoughts on the subject. "He knew that he was naked," and he fled from the voice and face of the Lord. From that moment one of the main objects of his life (in its inner and newer activities) came to be the DENIAL of Sex. Sex was conceived of as the great Antagonist, the old Serpent lying ever in wait to betray him; and there arrived a moment in the history of every race, and of every representative religion, when the sexual rites and ceremonies of the older time lost their naive and quasi-innocent character and became afflicted with a sense of guilt and indecency. This extraordinarily interesting and dramatic moment in human evolution was of course that in which self-consciousness grew powerful enough to penetrate to the centre of human vitality, the sanctum of man's inner life, his sexual instinct, and to deal it a terrific blow—a blow from which it has never yet recovered, and from which indeed it will not recover, until the very nature of man's inner life is changed.

It may be said that it was very foolish of Man to deny and to try to expel a perfectly natural and sensible thing, a necessary and indispensable part of his own nature. And that, as far as I can see, is perfectly true. But sometimes it is unavoidable, it would seem, to do foolish things—if only to convince oneself of one's own foolishness. On the other hand, this policy on the part of Man was certainly very wise—wiser than he knew—for in attempting to drive out Sex (which of course he could not do) he entered into a conflict which was bound to end in the expulsion of SOMETHING; and that something was the domination, within himself, of self-consciousness, the very thing which makes and ever has made sex detestable. Man did not succeed in driving the snake out of the Garden, but he drove himself out, taking the real old serpent of self-greed and self-gratification with him. When some day he returns to Paradise this latter will have died in his bosom and been cast away, but he will find the good Snake there as of old, full of healing and friendliness, among the branches of the Tree of Life.

Besides it is evident from other considerations that this moment of the denial of sex HAD to come. When one thinks of the enormous power of this passion, and its age-long, hold upon the human race, one realizes that once liberated from the instinctive bonds of nature, and backed by a self-conscious and self-seeking human intelligence it was on the way to become a fearful curse.

A monstrous Eft was of old the Lord and Master of Earth;
For him did his high sun flame, and his river billowing ran.

And this may have been all very well and appropriate in the carboniferous Epoch, but WE in the end of Time have no desire to fall under any such preposterous domination, or to return to the primal swamps from which organic nature has so slowly and painfully emerged.

I say it was the entry of self-consciousness into the sphere of Sex, and the consequent use of the latter for private ends, which poisoned this great race-power at its root. For above all, Sex, as representing through Childbirth the life of the Race (or of the Tribe, or, if you like, of Humanity at large) should be sacred and guarded from merely selfish aims, and therefore to use it only for such aims is indeed a desecration. And even if—as some maintain and I think rightly—sex is not MERELY for child-birth and physical procreation, but for mutual vitalizing and invigoration, it still subserves union and not egotism; and to use it egotistically is to commit the sin of Separation indeed. It is to cast away and corrupt the very bond of life and fellowship. The ancient peoples at any rate threw an illumination of religious (that is, of communal and public) value over sex-acts, and to a great extent made them into matters either of Temple-ritual and the worship of the gods, or of communal and pandemic celebration, as in the Saturnalia and other similar festivals. We have certainly no right to regard these celebrations—of either kind—as insincere. They were, at any rate in their inception, genuinely religious or genuinely social and festal; and from either point of view they were far better than the secrecy of private indulgence which characterizes our modern world in these matters. The thorough and shameless commercialism of Sex has alas! been reserved for what is called “Christian civilization,” and with it (perhaps as a necessary consequence) Prostitution and Syphilis have grown into appalling evils, accompanied by a gigantic degradation of social standards, and upgrowth of petty Philistinism and niaiserie. Love, in fact, having in this modern world-movement been denied, and its natural manifestations affected with a sense of guilt and of sin, has really languished and ceased to play its natural part in life; and a vast number of people—both men and women, finding themselves barred or derailed from the main object of existence, have turned their energies to ‘business’ or ‘money-making’ or ‘social advancement’ or something equally futile, as the only poor substitute and pis aller open to them.

Why (again we ask) did Christianity make this apparently great mistake? And again we must reply: Perhaps the mistake was not so great as it appears to be. Perhaps this was another case of the necessity of learning by loss. Love had to be denied, in the form of sex, in order that it might thus the better learn its own true values and needs.

Sex had to be rejected, or defiled with the sense of guilt and self-seeking, in order that having cast out its defilement it might return one day, transformed in the embrace of love. The whole process has had a deep and strange world-significance. It has led to an immensely long period of suppression—suppression of two great instincts—the physical instinct of sex and the emotional instinct of love. Two things which should naturally be conjoined have been separated; and both have suffered. And we know from the Freudian teachings what suppressions in the root-instincts necessarily mean. We know that they inevitably terminate in diseases and distortions of proper action, either in the body or in the mind, or in both; and that these evils can only be cured by the liberation of the said instincts again to their proper expression and harmonious functioning in the whole organism. No wonder then that, with this agelong suppression (necessary in a sense though it may have been) which marks the Christian dispensation, there should have been associated endless Sickness and Crime and sordid Poverty, the Crucifixion of animals in the name of Science and of human workers in the name of Wealth, and wars and horrors innumerable! Hercules writhing in the Nessus-shirt or Prometheus nailed to the rocks are only as figures of a toy miniature compared with this vision of the great and divine Spirit of Man caught in the clutches of those dread Diseases which through the centuries have been eating into his very heart and vitals.

It would not be fair to pile on the Christian Church the blame for all this. It had, no doubt, its part to play in the whole great scheme, namely, to accentuate the self-motive; and it played the part very thoroughly and successfully. For it must be remembered (what I have again and again insisted on) that in the pagan cults it was always the salvation of the CLAN, the TRIBE, the people that was the main consideration; the advantage of the individual took only a very secondary part. But in Christendom—after the communal enthusiasms of apostolic days and of the medieval and monastic brotherhoods and sisterhoods had died down—religion occupied itself more and more with each man or woman's INDIVIDUAL salvation, regardless of what might happen to the community; till, with the rise of Protestantism and Puritanism, this tendency reached such an extreme that, as some one has said, each man was absorbed in polishing up his own little soul in a corner to himself, in entire disregard to the damnation which might come to his neighbor. Religion, and Morality too, under the commercial regime became, as was natural, perfectly selfish. It was always: "Am I saved? Am I doing the right thing? Am I winning the favor of God and man? Will my claims to salvation be allowed? Did I make a good bargain in allowing Jesus to be crucified for me?" The poison of a diseased self-consciousness entered into the whole human system.

As I say, one must not blame the Christians too much for all this—partly because, AFTER the communal periods which I have just mentioned, Christianity was evidently deeply influenced by the rise of COMMERCIALISM, to which during the last two centuries it has so carefully and piously adapted itself; and partly because—if our view is anywhere near right—this microbial injection of self-consciousness was just the necessary work which (in conjunction with commercialism) it HAD to perform. But though one does not blame Christianity one cannot blind oneself to its defects—the defects necessarily arising from the part it had to play. When one compares a healthy Pagan

ritual—say of Apollo or Dionysus—including its rude and crude sacrifices if you like, but also including its whole-hearted spontaneity and dedication to the common life and welfare—with the morbid self-introspection of the Christian and the eternally recurring question “What shall I do to be saved?”—the comparison is not favorable to the latter. There is (at any rate in modern days) a mawkish milk-and-wateriness about the Christian attitude, and also a painful self-consciousness, which is not pleasant; and though Nietzsche’s blonde beast is a sufficiently disagreeable animal, one almost thinks that it were better to be THAT than to go about with one’s head meekly hanging on one side, and talking always of altruism and self-sacrifice, while in reality one’s heart was entirely occupied with the question of one’s own salvation. There is besides a lamentable want of grit and substance about the Christian doctrines and ceremonials. Somehow under the sex-taboo they became spiritualized and etherealized out of all human use. Study the initiation-rites of any savage tribe—with their strict discipline of the young braves in fortitude, and the overcoming of pain and fear; with their very detailed lessons in the arts of war and life and the duties of the grown man to his tribe; and with their quite practical instruction in matters of Sex; and then read our little Baptismal and Confirmation services, which ought to correspond thereto. How thin and attenuated and weak the latter appear! Or compare the Holy Communion, as celebrated in the sentimental atmosphere of a Protestant Church, with an ancient Eucharistic feast of real jollity and community of life under the acknowledged presence of the god; or the Roman Catholic service of the Mass, including its genuflexions and mock oblations and droning ritual sing-song, with the actual sacrifice in early days of an animal-god-victim on a blazing altar; and I think my meaning will be clear. We do not want, of course, to return to all the crudities and barbarities of the past; but also we do not want to become attenuated and spiritualized out of all mundane sense and recognition, and to live in an otherworld Paradise void of application to earthly affairs.

The sex-taboo in Christianity was apparently, as I have said, an effort of the human soul to wrest itself free from the entanglement of physical lust—which lust, though normal and appropriate and in a way gracious among the animals, had through the domination of self-consciousness become diseased and morbid or monstrous in Man. The work thus done has probably been of the greatest value to the human race; but, just as in other cases it has sometimes happened that the effort to do a certain work has resulted in the end in an unbalanced exaggeration so here. We are beginning to see now the harmful side of the repression of sex, and are tentatively finding our way back again to a more pagan attitude. And as this return-movement is taking place at a time when, from many obvious signs, the self-conscious, grasping, commercial conception of life is preparing to go on the wane, and the sense of solidarity to re-establish itself, there is really good hope that our return-journey may prove in some degree successful.

Man progresses generally, not both legs at once like a sparrow, but by putting one leg forward first, and then the other. There was this advantage in the Christian taboo of sex that by discouraging the physical and sensual side of love it did for the time being allow the spiritual side to come forward. But, as I have just now indicated, there is a limit to that process. We cannot always keep one leg first in walking, and we do not

want, in life, always to put the spiritual first, nor always the material and sensual. The two sides in the long run have to keep pace with each other.

And it may be that a great number of the very curious and seemingly senseless taboos that we find among the primitive peoples can be partly explained in this way: that is, that by ruling out certain directions of activity they enabled people to concentrate more effectually, for the time being, on other directions. To primitive folk the great world, whose ways are puzzling enough in all conscience to us, must have been simply bewildering in its dangers and complications. It was an amazement of Fear and Ignorance. Thunderbolts might come at any moment out of the blue sky, or a demon out of an old tree trunk, or a devastating plague out of a bad smell—or apparently even out of nothing at all! Under those circumstances it was perhaps wise, wherever there was the smallest SUSPICION of danger or ill-luck, to create a hard and fast TABOO—just as we tell our children ON NO ACCOUNT to walk under a ladder (thereby creating a superstition in their minds), partly because it would take too long to explain all about the real dangers of paint-pots and other things, and partly because for the children themselves it seems simpler to have a fixed and inviolable law than to argue over every case that occurs. The priests and elders among early folk no doubt took the line of FORBIDDAL of activities, as safer and simpler, even if carried sometimes too far, than the opposite, of easy permission and encouragement. Taboos multiplied—many of them quite senseless—but perhaps in this perilous maze of the world, of which I have spoken, it really WAS simpler to cut out a large part of the labyrinth, as forbidden ground, thus rendering it easier for the people to find their way in those portions of the labyrinth which remained. If you read in Deuteronomy (ch. xiv) the list of birds and beasts and fishes permitted for food among the Israelites, or tabooed, you will find the list on the whole reasonable, but you will be struck by some curious exceptions (according to our ideas), which are probably to be explained by the necessity of making the rules simple enough to be comprehended by everybody—even if they included the forbiddal of some quite eatable animals.

At some early period, in Babylonia or Assyria, a very stringent taboo on the Sabbath arose, which, taken up in turn by the Jewish and Christian Churches, has ruled the Western World for three thousand years or more, and still survives in a quite senseless form among some of our rural populations, who will see their corn rot in the fields rather than save it on a Sunday. It is quite likely that this taboo in its first beginning was due not to any need of a weekly rest-day (a need which could never be felt among nomad savages, but would only occur in some kind of industrial and stationary civilization), but to some superstitious fear, connected with such things as the changes of the Moon, and the probable ILL-LUCK of any enterprise undertaken on the seventh day, or any day of Moon-change. It is probable, however, that as time went on and Society became more complex, the advantages of a weekly REST-DAY (or market-day) became more obvious and that the priests and legislators deliberately turned the taboo to a social use. The learned modern Ethnologists, however, will generally have none of this latter idea. As a rule they delight in representing early peoples as totally destitute of common sense (which is supposed to be a monopoly of us moderns!); and if the

Sabbath-arrangement has had any value or use they insist on ascribing this to pure accident, and not to the application of any sane argument or reason.

It is true indeed that a taboo—in order to be a proper taboo—must not rest in the general mind on argument or reason. It may have had good sense in the past or even an underlying good sense in the present, but its foundation must rest on something beyond. It must be an absolute fiat—something of the nature of a Mystery or of Religion or Magic—and not to be disputed. This gives it its blood-curdling quality. The rustic does not know what would happen to him if he garnered his corn on Sunday, nor does the diner-out in polite society know what would happen if he spooned up his food with his knife—but they both are stricken with a sort of paralysis at the very suggestion of infringing these taboos.

Marriage-customs have always been a fertile field for the generation of taboos. It seems doubtful whether anything like absolute promiscuity ever prevailed among the human race, but there is much to show that wide choice and intercourse were common among primitive folk and that the tendency of later marriage custom has been on the whole to LIMIT this range of choice. At some early period the forbiddal of marriage between those who bore the same totem-name took place. Thus in Australia “no man of the Emu stock might marry an Emu woman; no Blacksnake might marry a Blacksnake woman, and so forth.” Among the Kamilaroi and the Arunta of S. Australia the tribe was divided into classes or clans, sometimes four, sometimes eight, and a man of one particular clan was only marriageable with a woman of another particular clan—say (1) with (3) or (2) with (4), and so on. Customs with a similar tendency, but different in detail, seem to have prevailed among native tribes in Central Africa and N. America. And the regulations in all this matter have been so (apparently) entirely arbitrary in the various cases that it would almost appear as if the bar of kinship through the Totem had been the EXCUSE, originating perhaps in some superstition, but that the real and more abiding object was simply limitation. And this perhaps was a wise line to take. A taboo on promiscuity had to be created, and for this purpose any current prejudice could be made use of.

With us moderns the whole matter has taken a different complexion. When we consider the enormous amount of suffering and disease, both of mind and body, arising from the sex-suppression of which I have just spoken, especially among women, we see that mere unreasoning taboos—which possibly had their place and use in the past—can be tolerated no longer. We are bound to turn the searchlight of reason and science on a number of superstitions which still linger in the dark and musty places of the Churches and the Law courts. Modern inquiry has shown conclusively not only the foundational importance of sex in the evolution of each human being, but also the very great VARIETY of spontaneous manifestations in different individuals and the vital necessity that these should be recognized, if society is ever to expand into a rational human form. It is not my object here to sketch the future of marriage and sex-relations generally—a subject which is now being dealt with very effectively from many sides; but only to insist on our using our good sense in the whole matter, and refusing any

longer to be bound by senseless pre-judgments.

Something of the same kind may be said with regard to Nakedness, which in modern Civilization has become the object of a very serious and indeed harmful taboo; both of speech and act. As someone has said, it became in the end of the nineteenth century almost a crime to mention by name any portion of the human body within a radius of about twenty inches from its centre (!) and as a matter of fact a few dress-reformers of that period were actually brought into court and treated as criminals for going about with legs bare up to the knees, and shoulders and chest uncovered! Public follies such as these have been responsible for much of the bodily and mental disease and suppression just mentioned, and the sooner they are sent to limbo the better. No sensible person would advocate promiscuous nakedness any more than promiscuous sex-relationship; nor is it likely that aged and deformed people would at any time wish to expose themselves. But surely there is enough good sense and appreciation of grace and fitness in the average human mind for it to be able to liberate the body from senseless concealment, and give it its due expression. The Greeks of old, having on the whole clean bodies, treated them with respect and distinction. The young men appeared quite naked in the palaestra, and even the girls of Sparta ran races publicly in the same condition; and some day when our bodies (and minds too) have become clean we shall return to similar institutions. But that will not be just yet. As long as the defilement of this commercial civilization is on us we shall prefer our dirt and concealment. The powers that be will protest against change. Heinrich Scham, in his charming little pamphlet *Nackende Menschen*, describes the consternation of the commercial people at such ideas:

“‘What will become of us,’ cried the tailors, ‘if you go naked?’

“And all the lot of them, hat, cravat, shirt, and shoemakers joined in the chorus.

“‘AND WHERE SHALL I CARRY MY MONEY?’ cried one who had just been made a director.”

XIII. THE GENESIS OF CHRISTIANITY

Referring back to the existence of something resembling a great World-religion which has come down the centuries, continually expanding and branching in the process, we have now to consider the genesis of that special brand or branch of it which we call Christianity. Each religion or cult, pagan or Christian, has had, as we have seen, a vast amount in common with the general World-religion; yet each has had its own special characteristics. What have been the main characteristics of the Christian branch, as differentiating it from the other branches?

We saw in the last chapter that a certain ascetic attitude towards Sex was one of the most salient marks of the Christian Church; and that whereas most of the pagan cults (though occasionally favoring frightful austerities and cruel sacrifices) did on the whole rejoice in pleasure and the world of the senses, Christianity—following largely on Judaism—displayed a tendency towards renunciation of the world and the flesh, and a withdrawal into the inner and more spiritual regions of the mind. The same tendency may be traced in the Egyptian and Phrygian cults of that period. It will be remembered how Juvenal (Sat. VI, 510-40) chaffs the priests of Cybele at Rome for making themselves “eunuchs for the kingdom of heaven’s sake,” or the rich Roman lady for plunging in the wintry Tiber for a propitiation to Isis. No doubt among the later pagans “the long intolerable tyranny of the senses over the soul” had become a very serious matter. But Christianity represented perhaps the most powerful reaction against this; and this reaction had, as indicated in the last chapter, the enormously valuable result that (for the time) it disentangled love from sex and established Love, pure and undefiled, as ruler of the world. “God is Love.” But, as also indicated, the divorce between the two elements of human nature, carried to an extreme, led in time to a crippling of both elements and the development of a certain morbidity and self-consciousness which, it cannot be denied, is painfully marked among some sections of Christians—especially those of the altruistic and ‘philanthropic’ type.

Another characteristic of Christianity which is also very fine in its way but has its limits of utility, has been its insistence on “morality.” Some modern writers indeed have gone so far—forgetting, I suppose, the Stoics—as to claim that Christianity’s chief mark is its high morality, and that the pagans generally were quite wanting in the moral sense! This, of course, is a profound mistake. I should say that, in the true sense of the word, the early and tribal peoples have been much more ‘moral’ as a rule—that is, ready as individuals to pay respect to the needs of the community—than the later and more civilized societies. But the mistake arises from the different interpretations of the word; for whereas all the pagan religions insisted very strongly on the just-mentioned kind of morality, which we should call CIVIC DUTY TO ONE’S NEIGHBOR, the Christian made morality to consist more especially in a man’s DUTY TO GOD. It became with them a private affair between a man’s self and-God, rather than a public affair; and thus led in the end to a very obnoxious and quite pharisaic kind of morality, whose chief inspiration was not the helping of one’s fellow-man but the saving of one’s own soul.

There may perhaps be other salient points of differentiation between Christianity and the preceding pagan religions; but for the present we may recognize these two—(a) the tendency towards a renunciation of the world, and the consequent cultivation of a purely spiritual love and (b) the insistence on a morality whose inspiration was a private sense of duty to God rather than a public sense of duty to one's neighbor and to society generally. It may be interesting to trace the causes which led to this differentiation.

Three centuries before our era the conquests of Alexander had had the effect of spreading the Greek thought and culture over most of the known world. A vast number of small bodies of worshipers of local deities, with their various rituals and religious customs, had thus been broken up, or at least brought into contact with each other and partially modified and hellenized. The orbit of a more general conception of life and religion was already being traced. By the time of the founding of the first Christian Church the immense conquests of Rome had greatly extended and established the process. The Mediterranean had become a great Roman lake. Merchant ships and routes of traffic crossed it in all directions; tourists visited its shores. The known world had become one. The numberless peoples, tribes, nations, societies within the girdle of the Empire, with their various languages, creeds, customs, religions, philosophies, were profoundly influencing each other. A great fusion was taking place; and it was becoming inevitable that the next great religious movement would have a world-wide character.

It was probable that this new religion would combine many elements from the preceding rituals in one cult. In connection with the fine temples and elaborate services of Isis and Cybele and Mithra there was growing up a powerful priesthood; Franz Cumont speaks of "the learned priests of the Asiatic cults" as building up, on the foundations of old fetichism and superstition, a complete religious philosophy—just as the Brahmins had built the monism of the Vedanta on the "monstrous idolatries of Hinduism." And it was likely that a similar process would evolve the new religion expected. Toutain again calls attention to the patronage accorded to all these cults by the Roman Emperors, as favoring a new combination and synthesis:—"Hadrien, Commode, Septime Severe, Julia Domna, Elagabal, Alexandre Severe, en particulier ont contribue personnellement a la popularite et au succes des cultes qui se celebraient en l'honneur de Serapis et d'Isis, des divinites syriennes et de Mithra."

It was also probable that this new Religion would show (as indicated in the last chapter) a reaction against mere sex-indulgence; and, as regards its standard of Morality generally, that, among so many conflicting peoples with their various civic and local customs, it could not well identify itself with any ONE of these but would evolve an inner inspiration of its own which in its best form would be love of the neighbor, regardless of the race, creed or customs of the neighbor, and whose sanction would not reside in any of the external authorities thus conflicting with each other, but in the sense of the soul's direct responsibility to God.

So much for what we might expect a priori as to the influence of the surroundings on the general form of the new Religion. And what about the kind of creed or creeds which that religion would favor? Here again we must see that the influence of the surroundings compelled a certain result. Those doctrines which we have described in the preceding chapters—doctrines of Sin and Sacrifice, a Savior, the Eucharist, the Trinity, the Virgin-birth, and so forth—were in their various forms seething, so to speak, all around. It was impossible for any new religious synthesis to escape them; all it could do would be to appropriate them, and to give them perhaps a color of its own. Thus it is into the midst of this germinating mass that we must imagine the various pagan cults, like fertilizing streams, descending. To trace all these streams would of course be an impossible task; but it may be of use, as an example of the process, to take the case of some particular belief. Let us take the belief in the coming of a Savior-god; and this will be the more suitable as it is a belief which has in the past been commonly held to be distinctive of Christianity. Of course we know now that it is not in any sense distinctive, but that the long tradition of the Savior comes down from the remotest times, and perhaps from every country of the world. The Messianic prophecies of the Jews and the fifty-third chapter of Isaiah emptied themselves into the Christian teachings, and infected them to some degree with a Judaic tinge. The “Messiah” means of course the Anointed One. The Hebrew word occurs some 40 times in the Old Testament; and each time in the Septuagint or Greek translation (made mainly in the third century BEFORE our era) the word is translated *Cristos*, or *Christos*, which again means Anointed. Thus we see that the idea or the word “The Christ” was in vogue in Alexandria as far back certainly as 280 B.C., or nearly three centuries before Jesus. And what the word “The Anointed” strictly speaking means, and from what the expression is probably derived, will appear later. In The Book of Enoch, written not later than B.C. 170, the Christ is spoken of as already existing in heaven, and about to come as judge of all men, and is definitely called “the Son of Man.” The Book of Revelations is FULL of passages from Enoch; so are the Epistles of Paul; so too the Gospels. The Book of Enoch believes in a Golden Age that is to come; it has Dantesque visions of Heaven and Hell, and of Angels good and evil, and it speaks of a “garden of Righteousness” with the “Tree of Wisdom” in its midst. Everywhere, says Prof. Drews, in the first century B.C., there was the longing for a coming Savior.

But the Savior-god, as we also know, was a familiar figure in Egypt. The great Osiris was the Savior of the world, both in his life and death: in his life through the noble works he wrought for the benefit of mankind, and in his death through his betrayal by the powers of darkness and his resurrection from the tomb and ascent into heaven. The Egyptian doctrines descended through Alexandria into Christianity—and though they did not influence the latter deeply until about 300 A.D., yet they then succeeded in reaching the Christian Churches, giving a color to their teachings with regard to the Savior, and persuading them to accept and honor the Egyptian worship of Isis in the Christian form of the Virgin Mary.

Again, another great stream of influence descended from Persia in the form of the cult of Mithra. Mithra, as we have seen, stood as a great Mediator between God and man. With his baptisms and eucharists, and his twelve disciples, and his birth in a cave, and so forth, he seemed to the early Fathers an invention of the devil and a most dangerous mockery on Christianity—and all the more so because his worship was becoming so exceedingly popular. The cult seems to have reached Rome about B.C. 70. It spread far and wide through the Empire. It extended to Great Britain, and numerous remains of Mithraic monuments and sculptures in this country—at York, Chester and other places—testify to its wide acceptance even here. At Rome the vogue of Mithraism became so great that in the third century A. D., it was quite doubtful whether it OR Christianity would triumph; the Emperor Aurelian in 273 founded a cult of the Invincible Sun in connection with Mithraism; and as St. Jerome tells us in his letters, the latter cult had at a later time to be suppressed in Rome and Alexandria by PHYSICAL FORCE, so powerful was it.

Nor was force the only method employed. IMITATION is not only the sincerest flattery, but it is often the most subtle and effective way of defeating a rival. The priests of the rising Christian Church were, like the priests of ALL religions, not wanting in craft; and at this moment when the question of a World-religion was in the balance, it was an obvious policy for them to throw into their own scale as many elements as possible of the popular Pagan cults. Mithraism had been flourishing for 600 years; and it is, to say the least, CURIOUS that the Mithraic doctrines and legends which I have just mentioned should all have been adopted (quite unintentionally of course!) into Christianity; and still more so that some others from the same source, like the legend of the Shepherds at the Nativity and the doctrine of the Resurrection and Ascension, which are NOT mentioned at all in the original draft of the earliest Gospel (St. Mark), should have made their appearance, in the Christian writings at a later time, when Mithraism was making great forward strides. History shows that as a Church progresses and expands it generally feels compelled to enlarge and fortify its own foundations by inserting material which was not there at first. I shall shortly give another illustration of this; at present I will merely point out that the Christian writers, as time went on, not only introduced new doctrines, legends, miracles and so forth—most of which we can trace to antecedent pagan sources—but that they took especial pains to destroy the pagan records and so obliterate the evidence of their own dishonesty. We learn from Porphyry that there were several elaborate treatises setting forth the religion of Mithra; and J. M. Robertson adds (*Pagan Christs*, p. 325): “everyone of these has been destroyed by the care of the Church, and it is remarkable that even the treatise of Firmicus is mutilated at a passage (v.) where he seems to be accusing Christians of following Mithraic usages.” While again Professor Murray says, “The polemic literature of Christianity is loud and triumphant; the books of the Pagans have been DESTROYED.”

Returning to the doctrine of the Savior, I have already in preceding chapters given so many instances of belief in such a deity among the pagans—whether he be called Krishna or Mithra or Osiris or Horus or Apollo or Hercules—that it is not necessary to

dwell on the subject any further in order to persuade the reader that the doctrine was 'in the air' at the time of the advent of Christianity. Even Dionysus, then a prominent figure in the 'Mysteries,' was called Eleutherios, The Deliverer. But it may be of interest to trace the same doctrine among the PRE-CHRISTIAN sects of Gnostics. The Gnostics, says Professor Murray, "are still commonly thought of as a body of CHRISTIAN heretics. In reality there were Gnostic sects scattered over the Hellenistic world BEFORE Christianity as well as after. They must have been established in Antioch and probably in Tarsus well before the days of Paul or Apollos. Their Savior, like the Jewish Messiah, was established in men's minds before the Savior of the Christians. 'If we look close,' says Professor Bousset, 'the result emerges with great clearness that the figure of the Redeemer as such did not wait for Christianity to force its way into the religion of Gnosis, but was already present there under various forms.'"

This Gnostic Redeemer, continues Professor Murray, "is descended by a fairly clear genealogy from the 'Tritos Soter' ('third Savior') of early Greece, contaminated with similar figures, like Attis and Adonis from Asia Minor, Osiris from Egypt, and the special Jewish conception of the Messiah of the Chosen people. He has various names, which the name of Jesus or 'Christos,' 'the Anointed,' tends gradually to supersede. Above all, he is in some sense Man, or 'the second Man' or 'the Son of Man' . . . He is the real, the ultimate, the perfect and eternal Man, of whom all bodily men are feeble copies."

This passage brings vividly before the mind the process of which I have spoken, namely, the fusion and mutual interchange of ideas on the subject of the Savior during the period anterior to our era. Also it exemplifies to us through what an abstract sphere of Gnostic religious speculation the doctrine had to travel before reaching its expression in Christianity. This exalted and high philosophical conception passed on and came out again to some degree in the Fourth Gospel and the Pauline Epistles (especially I Cor. xv); but I need hardly say it was not maintained. The enthusiasm of the little scattered Christian bodies—with their communism of practice with regard to THIS world and their intensity of faith with regard to the next—began to wane in the second and third centuries A.D. As the Church (with capital initial) grew, so was it less and less occupied with real religious feeling, and more and more with its battles against persecution from outside, and its quarrels and dissensions concerning heresies within its own borders. And when at the Council of Nicaea (325 A.D) it endeavored to establish an official creed, the strife and bitterness only increased. "There is no wild beast," said the Emperor Julian, "like an angry theologian." Where the fourth Evangelist had preached the gospel of Love, and Paul had announced redemption by an inner and spiritual identification with Christ, "As in Adam all die, so in Christ shall all be made alive"; and whereas some at any rate of the Pagan cults had taught a glorious salvation by the new birth of a divine being within each man: "Be of good cheer, O initiates in the mystery of the liberated god; For to you too out of all your labors and sorrows shall come Liberation"—the Nicene creed had nothing to propound except some extremely futile speculations about the relation to each other of the Father and the Son, and the relation of BOTH to the Holy Ghost, and of all THREE to the Virgin

Mary—speculations which only served for the renewal of shameful strife and animosities—riots and bloodshed and murder—within the Church, and the mockery of the heathen without. And as far as it dealt with the crucifixion, death and resurrection of the Lord it did not differ from the score of preceding pagan creeds, except in the thorough materialism and lack of poetry in statement which it exhibits. After the Council of Nicaea, in fact, the Judaic tinge in the doctrines of the Church becomes more apparent, and more and more its Scheme of Salvation through Christ takes the character of a rather sordid and huckstering bargain by which Man gets the better of God by persuading the latter to sacrifice his own Son for the redemption of the world! With the exception of a few episodes like the formation during the Middle Ages of the noble brotherhoods and sisterhoods of Frairs and Nuns, dedicated to the help and healing of suffering humanity, and the appearance of a few real lovers of mankind (and the animals) like St. Francis—(and these manifestations can hardly be claimed by the Church, which pretty consistently opposed them)—it may be said that after about the fourth century the real spirit and light of early Christian enthusiasm died away. The incursions of barbarian tribes from the North and East, and later of Moors and Arabs from the South, familiarized the European peoples with the ideas of bloodshed and violence; gross and material conceptions of life were in the ascendant; and a romantic and aspiring Christianity gave place to a worldly and vulgar Churchianity.

I have in these two or three pages dealt only—and that very briefly—with the entry of the pagan doctrine of the Savior into the Christian field, showing its transformation there and how Christianity could not well escape having a doctrine of a Savior, or avoid giving a color of its own to that doctrine. To follow out the same course with other doctrines, like those which I have mentioned above, would obviously be an endless task—which must be left to each student or reader to pursue according to his opportunity and capacity. It is clear anyhow, that all these elements of the pagan religions—pouring down into the vast reservoir, or rather whirlpool, of the Roman Empire, and mixing among all these numerous brotherhoods, societies, collegia, mystery-clubs, and groups which were at that time looking out intently for some new revelation or inspiration—did more or less automatically act and react upon each other, and by the general conditions prevailing were modified, till they ultimately combined and took united shape in the movement which we call Christianity, but which only—as I have said—narrowly escaped being called Mithraism—so nearly related and closely allied were these cults with each other.

At this point it will naturally be asked: “And where in this scheme of the Genesis of Christianity is the chief figure and accredited leader of the movement—namely Jesus Christ himself—for to all appearance in the account here given of the matter he is practically non-existent or a negligible quantity?” And the question is a very pertinent one, and very difficult to answer. “Where is the founder of the Religion?”—or to put it in another form: “Is it necessary to suppose a human and visible Founder at all?” A few years ago such a mere question would have been accounted rank blasphemy, and would only—if passed over—have been ignored on account of its supposed absurdity. To-day, however, owing to the enormous amount of work which has been done of late

on the subject of Christian origins, the question takes on quite a different complexion. And from Strauss onwards a growingly influential and learned body of critics is inclined to regard the whole story of the Gospels as LEGENDARY. Arthur Drews, for instance, a professor at Karlsruhe, in his celebrated book *The Christ-Myth*, places David F. Strauss as first in the myth field—though he allows that Dupuis in *L'origine de tous les cultes* (1795) had given the clue to the whole idea. He then mentions Bruno Bauer (1877) as contending that Jesus was a pure invention of Mark's, and John M. Robertson as having in his *Christianity and Mythology* (1900) given the first thoroughly reasoned exposition of the legendary theory; also Emilio Bossi in Italy, who wrote *Jesu Christo non e mai esistito*, and similar authors in Holland, Poland, and other countries, including W. Benjamin Smith, the American author of *The Pre-Christian Jesus* (1906), and P. Jensen in *Das Gilgamesch Epos in den Welt-literatur* (1906), who makes the Jesus-story a variant of the Babylonian epic, 2000 B.C. A pretty strong list! "But," continues Drews, "ordinary historians still ignore all this." Finally, he dismisses Jesus as "a figure swimming obscurely in the mists of tradition." Nevertheless I need hardly remark that, large and learned as the body of opinion here represented is, a still larger (but less learned) body fights desperately for the actual HISTORICITY of Jesus, and some even still for the old view of him as a quite unique and miraculous revelation of Godhood on earth.

At first, no doubt, the LEGENDARY theory seems a little TOO far-fetched. There is a fashion in all these things, and it MAY be that there is a fashion even here. But when you reflect how rapidly legends grow up even in these days of exact Science and an omniscient Press; how the figure of Shakespeare, dead only 300 years, is almost completely lost in the mist of Time, and even the authenticity of his works has become a subject of controversy; when you find that William Tell, supposed to have lived some 300 years again before Shakespeare, and whose deeds in minutest detail have been recited and honored all over Europe, is almost certainly a pure invention, and never existed; when you remember—as mentioned earlier in this book—that it was more than five hundred years after the supposed birth of Jesus before any serious effort was made to establish the date of that birth—and that then a purely mythical date was chosen: the 25th December, the day of the SUN'S new birth after the winter solstice, and the time of the supposed birth of Apollo, Bacchus, and the other Sungods; when, moreover, you think for a moment what the state of historical criticism must have been, and the general standard of credibility, 1,900 years ago, in a country like Syria, and among an ignorant population, where any story circulating from lip to lip was assured of credence if sufficiently marvelous or imaginative;—why, then the legendary theory does not seem so improbable. There is no doubt that after the destruction of Jerusalem (in A.D. 70), little groups of believers in a redeeming 'Christ' were formed there and in other places, just as there had certainly existed, in the first century B.C., groups of Gnostics, Therapeutae, Essenes and others whose teachings were very SIMILAR to the Christian, and there was now a demand from many of these groups for 'writings' and 'histories' which should hearten and confirm the young and growing Churches. The Gospels and Epistles, of which there are still extant a great abundance, both apocryphal and canonical, met this demand; but how far their records of the per-

son of Jesus of Nazareth are reliable history, or how far they are merely imaginative pictures of the kind of man the Saviour might be expected to be, is a question which, as I have already said, is a difficult one for skilled critics to answer, and one on which I certainly have no intention of giving a positive verdict. Personally I must say I think the 'legendary' solution quite likely, and in some ways more satisfactory than the opposite one—for the simple reason that it seems much more encouraging to suppose that the story of Jesus, (gracious and beautiful as it is) is a myth which gradually formed itself in the conscience of mankind, and thus points the way of humanity's future evolution, than to suppose it to be the mere record of an unique and miraculous interposition of Providence, which depended entirely on the powers above, and could hardly be expected to occur again.

However, the question is not what we desire, but what we can prove to be the actual fact. And certainly the difficulties in the way of regarding the Gospel story (or stories, for there is not one consistent story) as TRUE are enormous. If anyone will read, for instance, in the four Gospels, the events of the night preceding the crucifixion and reckon the time which they would necessarily have taken to enact—the Last Supper, the agony in the Garden, the betrayal by Judas, the haling before Caiaphas and the Sanhedrin, and then before Pilate in the Hall of judgment (though courts for the trial of malefactors do not GENERALLY sit in the middle of the night); then—in Luke—the interposed visit to Herod, and the RETURN to Pilate; Pilate's speeches and washing of hands before the crowd; then the scourging and the mocking and the arraying of Jesus in purple robe as a king; then the preparation of a Cross and the long and painful journey to Golgotha; and finally the Crucifixion at sunrise;—he will see—as has often been pointed out—that the whole story is physically impossible. As a record of actual events the story is impossible; but as a record or series of notes derived from the witnessing of a "mystery-play"—and such plays with VERY SIMILAR incidents were common enough in antiquity in connection with cults of a dying Savior, it very likely IS true (one can see the very dramatic character of the incidents: the washing of hands, the three-fold denial by Peter, the purple robe and crown of thorns, and so forth); and as such it is now accepted by many well-qualified authorities.

There are many other difficulties. The raising of Lazarus, already dead three days, the turning of water into wine (a miracle attributed to Bacchus, of old), the feeding of the five thousand, and others of the marvels are, to say the least, not easy of digestion. The "Sermon on the Mount" which, with the "Lord's Prayer" embedded in it, forms the great and accepted repository of 'Christian' teaching and piety, is well known to be a collection of sayings from pre-Christian writings, including the Psalms, Isaiah, Ecclesiasticus, the Secrets of Enoch, the Shemonehesreh (a book of Hebrew prayers), and others; and the fact that this collection was really made AFTER the time of Jesus, and could not have originated from him, is clear from the stress which it lays on "persecutions" and "false prophets"—things which were certainly not a source of trouble at the time Jesus is supposed to be speaking, though they were at a later time—as well as from the occurrence of the word "Gentiles," which being here used apparently in contra-distinction to "Christians" could not well be appropriate at a time when no recog-

nized Christian bodies as yet existed.

But the most remarkable point in this connection is the absolute silence of the Gospel of Mark on the subject of the Resurrection and Ascension—that is, of the ORIGINAL Gospel, for it is now allowed on all hands that the twelve verses Mark xvi. 9 to the end, are a later insertion. Considering the nature of this event, astounding indeed, if physically true, and unique in the history of the world, it is strange that this Gospel—the earliest written of the four Gospels, and nearest in time to the actual evidence—makes no mention of it. The next Gospel in point of time—that of Matthew—mentions the matter rather briefly and timidly, and reports the story that the body had been STOLEN from the sepulchre. Luke enlarges considerably and gives a whole long chapter to the resurrection and ascension; while the Fourth Gospel, written fully twenty years later still—say about A. D. 120—gives two chapters and a GREAT VARIETY OF DETAILS!

This increase of detail, however, as one gets farther and farther from the actual event is just what one always finds, as I have said before, in legendary traditions. A very interesting example of this has lately come to light in the case of the traditions concerning the life and death of the Persian Bab. The Bab, as most of my readers will know, was the Founder of a great religious movement which now numbers (or numbered before the Great War) some millions of adherents, chiefly Mahommedans, Christians, Jews and Parsees. The period of his missionary activity was from 1845 to 1850. His Gospel was singularly like that of Jesus—a gospel of love to mankind—only (as might be expected from the difference of date) with an even wider and more deliberate inclusion of all classes, creeds and races, sinners and saints; and the incidents and entourage of his ministry were also singularly similar. He was born at Shiraz in 1820, and growing up a promising boy and youth, fell at the age Of 21 under the influence of a certain Seyyid Kazim, leader of a heterodox sect, and a kind of fore-runner or John the Baptist to the Bab. The result was a period of mental trouble (like the “temptation in the wilderness”), after which the youth returned to Shiraz and at the age of twenty-five began his own mission. His real name was Mirza Ali Muhammad, but he called himself thenceforth The Bab, i.e. the Gate (“I am the Way”); and gradually there gathered round him disciples, drawn by the fascination of his personality and the devotion of his character. But with the rapid increase of his following great jealousy and hatred were excited among the Mullahs, the upholders of a fanatical and narrow-minded Mahommedanism and quite corresponding to the Scribes and Pharisees of the New Testament. By them he was denounced to the Turkish Government. He was arrested on a charge of causing political disturbance, and was condemned to death. Among his disciples was one favorite, who was absolutely devoted to his Master and refused to leave him at the last. So together they were suspended over the city wall (at Tabriz) and simultaneously shot. This was on the 8th July, 1850.

In November 1850—or between that date and October 1851, a book appeared, written by one of the Bab’s earliest and most enthusiastic disciples—a merchant of Kashan—and giving in quite simple and unpretending form a record of the above events. There is in it no account of miracles or of great pretensions to godhood and the like. It is just

a plain history of the life and death of a beloved teacher. It was cordially received and circulated far and wide; and we have no reason for doubting its essential veracity. And even if proved now to be inaccurate in one or two details, this would not invalidate the moral of the rest of the story—which is as follows:

After the death of the Bab a great persecution took place (in 1852); there were many Babi martyrs, and for some years the general followers were scattered. But in time they gathered themselves together again; successors to the original prophet were appointed—though not without dissensions—and a Babi church, chiefly at Acca or Acre in Syria, began to be formed. It was during this period that a great number of legends grew up—legends of miraculous babyhood and boyhood, legends of miracles performed by the mature Bab, and so forth; and when the newly-forming Church came to look into the matter it concluded (quite naturally!) that such a simple history as I have outlined above would never do for the foundation of its plans, now grown somewhat ambitious. So a new Gospel was framed, called the *Tarikh-i-Jadid* (“The new History” or “The new Way”), embodying and including a lot of legendary matter, and issued with the authority of “the Church.” This was in 1881-2; and comparing this with the original record (called *The point of Kaf*) we get a luminous view of the growth of fable in those thirty brief years which had elapsed since the Bab’s death. Meanwhile it became very necessary of course to withdraw from circulation as far as possible all copies of the original record, lest they should give the lie to the later ‘Gospel’; and this apparently was done very effectively—so effectively indeed that Professor Edward Browne (to whom the world owes so much on account of his labors in connection with Babism), after arduous search, came at one time to the conclusion that the original was no longer extant. Most fortunately, however, the well-known Comte de Gobineau had in the course of his studies on Eastern Religions acquired a copy of *The point of Kaf*; and this, after his death, was found among his literary treasures and identified (as was most fitting) by Professor Browne himself.

Such in brief is the history of the early Babi Church—a Church which has grown up and expanded greatly within the memory of many yet living. Much might be written about it, but the chief point at present is for us to note the well-verified and interesting example it gives of the rapid growth in Syria of a religious legend and the reasons which contributed to this growth—and to be warned how much more rapidly similar legends probably grew up in the same land in the middle of the First Century, A.D. The story of the Bab is also interesting to us because, while this mass of legend was formed around it, there is no possible doubt about the actual existence of a historical nucleus in the person of Mirza Ali Muhammad.

On the whole, one is sometimes inclined to doubt whether any great movement ever makes itself felt in the world, without dating first from some powerful personality or group of personalities, ROUND which the idealizing and myth-making genius of mankind tends to crystallize. But one must not even here be too certain. Something of the Apostle Paul we know, and something of ‘John’ the Evangelist and writer of the Epistle I John; and that the ‘Christian’ doctrines dated largely from the preaching and

teaching of these two we cannot doubt; but Paul never saw Jesus (except “in the Spirit”), nor does he ever mention the man personally, or any incident of his actual life (the “crucified Christ” being always an ideal figure); and ‘John’ who wrote the Gospel was certainly not the same as the disciple who “lay in Jesus’ bosom”—though an intercalated verse, the last but one in the Gospel, asserts the identity.

There may have been a historic Jesus—and if so, to get a reliable outline of his life would indeed be a treasure; but at present it would seem there is no sign of that. If the historicity of Jesus, in any degree, could be proved, it would give us reason for supposing—what I have personally always been inclined to believe—that there was also a historical nucleus for such personages as Osiris, Mithra, Krishna, Hercules, Apollo and the rest. The question, in fact, narrows itself down to this, Have there been in the course of human evolution certain, so to speak, NODAL points or periods at which the psychologic currents ran together and condensed themselves for a new start; and has each such node or point of condensation been marked by the appearance of an actual and heroic man (or woman) who supplied a necessary impetus for the new departure, and gave his name to the resulting movement? OR is it sufficient to suppose the automatic formation of such nodes or starting-points without the intervention of any special hero or genius, and to imagine that in each case the myth-making tendency of mankind CREATED a legendary and inspiring figure and worshiped the same for a long period afterwards as a god?

As I have said before, this is a question which, interesting as it is, is not really very important. The main thing being that the prophetic and creative spirit of mankind HAS from time to time evolved those figures as idealizations of its “heart’s desire” and placed a halo round their heads. The long procession of them becomes a REAL piece of History—the history of the evolution of the human heart, and of human consciousness. But with the psychology of the whole subject I shall deal in the next chapter.

I may here, however, dwell for a moment on two other points which belong properly to this chapter. I have already mentioned the great reliance placed by the advocates of a unique ‘revelation’ on the high morality taught in the Gospels and the New Testament generally. There is no need of course to challenge that morality or to depreciate it unduly; but the argument assumes that it is so greatly superior to anything of the kind that had been taught before that we are compelled to suppose something like a revelation to explain its appearance—whereas of course anyone familiar with the writings of antiquity, among the Greeks or Romans or Egyptians or Hindus or later Jews, knows perfectly well that the reported sayings of Jesus and the Apostles may be paralleled abundantly from these sources. I have illustrated this already from the Sermon on the Mount. If anyone will glance at the Testament of the Twelve Patriarchs—a Jewish book composed about 120 B. C.—he will see that it is full of moral precepts, and especially precepts of love and forgiveness, so ardent and so noble that it hardly suffers in any way when compared with the New Testament teaching, and that consequently no special miracle is required to explain the appearance of the latter.

The twelve Patriarchs in question are the twelve sons of Jacob, and the book consists of their supposed deathbed scenes, in which each patriarch in turn recites his own (more or less imaginary) life and deeds and gives pious counsel to his children and successors. It is composed in a fine and poetic style, and is full of lofty thought, remindful in scores of passages of the Gospels—words and all—the coincidences being too striking to be accidental. It evidently had a deep influence on the authors of the Gospels, as well as on St. Paul. It affirms a belief in the coming of a Messiah, and in salvation for the Gentiles. The following are some quotations from it: Testament of Zebulun (p. 116): “My children, I bid you keep the commands of the Lord, and show mercy to your neighbours, and have compassion towards all, not towards men only, but also towards beasts.” Dan (p. 127): “Love the Lord through all your life, and one another with a true heart.” Joseph (p. 173): “I was sick, and the Lord visited me; in prison, and my God showed favor unto me.” Benjamin (p. 209): “For as the sun is not defiled by shining on dung and mire, but rather drieth up both and driveth away the evil smell, so also the pure mind, encompassed by the defilements of earth, rather cleanseth them and is not itself defiled.”

I think these quotations are sufficient to prove the high standard of this book, which was written in the Second Century B. C., and FROM which the New Testament authors copiously borrowed.

The other point has to do with my statement at the beginning of this chapter that two of the main ‘characteristics’ of Christianity were its insistence on (a) a tendency towards renunciation of the world, and a consequent cultivation of a purely spiritual love, and (b) on a morality whose inspiration was a private sense of duty to God rather than a public sense of duty to one’s neighbor and to society generally. I think, however, that the last-mentioned characteristic ought to be viewed in relation to a third, namely, (c) the extraordinarily DEMOCRATIC tendency of the new Religion. Celsus (A.D. 200) jeered at the early Christians for their extreme democracy: “It is only the simpletons, the ignoble, the senseless—slaves and womenfolk and children—whom they wish to persuade [to join their churches] or CAN persuade”—“wool-dressers and cobblers and fullers, the most uneducated and vulgar persons,” and “whosoever is a sinner, or unintelligent or a fool, in a word, whoever is god-forsaken, him the Kingdom of God will receive.” Thus Celsus, the accomplished, clever, philosophic and withal humorous critic, laughed at the new religionists, and prophesied their speedy extinction. Nevertheless he was mistaken. There is little doubt that just the inclusion of women and weaklings and outcasts did contribute LARGELY to the spread of Christianity (and Mithraism). It brought hope and a sense of human dignity to the despised and rejected of the earth. Of the immense numbers of lesser officials who carried on the vast organization of the Roman Empire, most perhaps, were taken from the ranks of the freedmen and quondam slaves, drawn from a great variety of races and already familiar with pagan cults of all kinds—Egyptian, Syrian, Chaldean, Iranian, and so forth. This fact helped to give to Christianity—under the fine tolerance of the Empire—its democratic character and also its willingness to accept all. The rude and menial masses, who had hitherto been almost beneath the notice of Greek and Roman culture, flocked

in; and though this was doubtless, as time went on, a source of weakness to the Church, and a cause of dissension and superstition, yet it was in the inevitable line of human evolution, and had a psychological basis which I must now endeavor to explain.

XIV. THE MEANING OF IT ALL

The general drift and meaning of the present book must now, I think, from many hints scattered in the course of it, be growing clear. But it will be well perhaps in this chapter, at the risk of some repetition, to bring the whole argument together. And the argument is that since the dawn of humanity on the earth—many hundreds of thousands or perhaps a million years ago—there has been a slow psychologic evolution, a gradual development or refinement of Consciousness, which at a certain stage has spontaneously given birth in the human race to the phenomena of religious belief and religious ritual—these phenomena (whether in the race at large or in any branch of it) always following, step by step, a certain order depending on the degrees of psychologic evolution concerned; and that it is this general fact which accounts for the strange similarities of belief and ritual which have been observed all over the world and in places far remote from each other, and which have been briefly noted in the preceding chapters.

And the main stages of this psychologic evolution—those at any rate with which we are here concerned—are Three: the stage of Simple Consciousness, the stage of Self-consciousness, and a third Stage which for want of a better word we may term the stage of Universal Consciousness. Of course these three stages may at some future time be analyzed into lesser degrees, with useful result—but at present I only desire to draw attention to them in the rough, so to speak, to show that it is from them and from their passage one into another that there has flowed by a perfectly natural logic and concatenation the strange panorama of humanity's religious evolution—its superstitions and magic and sacrifices and dancings and ritual generally, and later its incantations and prophecies, and services of speech and verse, and paintings and forms of art and figures of the gods. A wonderful Panorama indeed, or poem of the Centuries, or, if you like, World-symphony with three great leading motives!

And first we have the stage of Simple Consciousness. For hundreds of centuries (we cannot doubt) Man possessed a degree of consciousness not radically different from that of the higher Animals, though probably more quick and varied. He saw, he heard, he felt, he noted. He acted or reacted, quickly or slowly, in response to these impressions. But the consciousness of himself, as a being separate from his impressions, as separate from his surroundings, had not yet arisen or taken hold on him. He was an instinctive part, of Nature. And in this respect he was very near to the Animals. Self-consciousness in the animals, in a germinal form is there, no doubt, but EMBEDDED, so to speak, in the general world consciousness. It is on this account that the animals have such a marvellously acute perception and instinct, being embedded in Nature. And primitive Man had the same. Also we must, as I have said before, allow that man in that stage must have had the same sort of grace and perfection of form and movement as we admire in the (wild) animals now. It would be quite unreasonable to suppose that he, the crown in the same sense of creation, was from the beginning a lame and ill-made abortion. For a long period the tribes of men, like the tribes of the higher

animals, must have been (on the whole, and allowing for occasional privations and sufferings and conflicts) well adapted to their surroundings and harmonious with the earth and with each other. There must have been a period resembling a Golden Age—some condition at any rate which, compared with subsequent miseries, merited the epithet ‘golden.’

It was during this period apparently that the system of Totems arose. The tribes felt their relationship to their winged and fourfooted mates (including also other objects of nature) so deeply and intensely that they adopted the latter as their emblems. The pre-civilization Man fairly worshipped, the animals and was proud to be called after them. Of course we moderns find this strange. We, whose conceptions of these beautiful creatures are mostly derived from a broken-down cab-horse, or a melancholy milk-rummaged cow in a sooty field, or a diseased and despondent lion or eagle at the Zoo, have never even seen or loved them and have only wondered with our true commercial instinct what profit we could extract from them. But they, the primitives, loved and admired the animals; they domesticated many of them by the force of a natural friendship, and accorded them a kind of divinity. This was the age of tribal solidarity and of a latent sense of solidarity with Nature. And the point of it all is (with regard to the subject we have in hand) that this was also the age from which by a natural evolution the sense of Religion came to mankind. If Religion in man is the sense of ties binding his inner self to the powers of the universe around him, then it is evident I think that primitive man as I have described him possessed the REALITY of this sense—though so far buried and subconscious that he was hardly aware of it. It was only later, and with the coming of the Second Stage, that this sense began to rise distinctly into consciousness.

Let us pass then to the Second Stage. There is a moment in the evolution of a child—somewhere perhaps about the age of three—when the simple almost animal-like consciousness of the babe is troubled by a new element—SELF-consciousness. The change is so marked, so definite, that (in the depth of the infant’s eyes) you can almost SEE it take place. So in the evolution of the human race there has been a period—also marked and definite, though extending intermittent over a vast interval of time—when on men in general there dawned the consciousness of THEMSELVES, of their own thoughts and actions. The old simple acceptance of sensations and experiences gave place to REFLECTION. The question arose: “How do these sensations and experiences affect ME? What can I do to modify them, to encourage the pleasurable, to avoid or inhibit the painful, and so on?” From that moment a new motive was added to life. The mind revolved round a new centre. It began to spin like a little eddy round its own axis. It studied ITSELF first and became deeply concerned about its own pleasures and pains, losing touch the while with the larger life which once dominated it—the life of Nature, the life of the Tribe. The old unity of the spirit, the old solidarity, were broken up.

I have touched on this subject before, but it is so important that the reader must excuse repetition. There came an inevitable severance, an inevitable period of strife.

The magic mirror of the soul, reflecting nature as heretofore in calm and simple grace, was suddenly cracked across. The new self-conscious man (not all at once but gradually) became alienated from his tribe. He lapsed into strife with his fellows. Ambition, vanity, greed, the love of domination, the desire for property and possessions, set in. The influences of fellowship and solidarity grew feebler. He became alienated from his great Mother. His instincts were less and less sure—and that in proportion as brain-activity and self-regarding calculation took their place. Love and mutual help were less compelling in proportion as the demands of self-interest grew louder and more insistent. Ultimately the crisis came. Cain murdered his brother and became an outcast. The Garden of Eden and the Golden Age closed their gates behind him. He entered upon a period of suffering—a period of labor and toil and sorrow such as he had never before known, and such as the animals certainly have never known. And in that distressful state, in that doleful valley of his long pilgrimage, he still remains to-day.

Thus has the canker of self-consciousness done its work. It would be foolish and useless to rail against the process, or to blame any one for it. It had to be. Through this dismal vale of self-seeking mankind had to pass—if only in order at last to find the True Self which was (and still remains) its goal. The pilgrimage will not last for ever. Indeed there are signs that the recent Great War and the following Events mark the lowest point of descent and the beginning of the human soul's return to sanity and ascent towards the heavenly Kingdom. No doubt Man will arrive again SOME day at the grace, composure and leisurely beauty of life which the animals realized long ago, though he seems a precious long time about it; and when all this nightmare of Greed and Vanity and Self-conceit and Cruelty and Lust of oppression and domination, which marks the present period, is past—and it WILL pass—then Humanity will come again to its Golden Age and to that Paradise of redemption and peace which has for so long been prophesied.

But we are dealing with the origins of Religion; and what I want the reader to see is that it was just this breaking up of the old psychologic unity and continuity of man with his surroundings which led to the whole panorama of the rituals and creeds. Man, centering round himself, necessarily became an exile from the great Whole. He committed the sin (if it was a sin) of Separation. Anyhow Nemesis was swift. The sense of loneliness and the sense of guilt came on him. The realization of himself as a separate conscious being necessarily led to his attributing a similar consciousness of some kind to the great Life around him. Action and reaction are equal and opposite. Whatever he may have felt before, it became clear to him now that beings more or less like himself—though doubtless vaster and more powerful—moved behind the veil of the visible world. From that moment the belief in Magic and Demons and Gods arose or slowly developed itself; and in the midst of this turmoil of perilous and conflicting powers, he perceived himself an alien and an exile, stricken with Fear, stricken with the sense of Sin. If before, he had experienced fear—in the kind of automatic way of self-preservation in which the animals feel it—he now, with fevered self-regard and excited imagination, experienced it in double or treble degree. And if, before, he had been aware that fortune and chance were not always friendly and propitious to his designs, he now per-

ceived or thought he perceived in every adverse happening the deliberate persecution of the powers, and an accusation of guilt directed against him for some neglect or deficiency in his relation to them. Hence by a perfectly logical and natural sequence there arose the belief in other-world or supernatural powers, whether purely fortuitous and magical or more distinctly rational and personal; there arose the sense of Sin, or of offence against these powers; there arose a complex ritual of Expiation—whether by personal sacrifice and suffering or by the sacrifice of victims. There arose too a whole catalogue of ceremonies—ceremonies of Initiation, by which the novice should learn to keep within the good grace of the Powers, and under the blessing of his Tribe and the protection of its Totem; ceremonies of Eucharistic meals which should restore the lost sanctity of the common life and remove the sense of guilt and isolation; ceremonies of Marriage and rules and rites of sex-connection, fitted to curb the terrific and demonic violence of passions which else indeed might easily rend the community asunder. And so on. It is easy to see that granted an early stage of simple unreflecting nature-consciousness, and granting this broken into and, after a time, shattered by the arrival of SELF-consciousness there would necessarily follow in spontaneous yet logical order a whole series of religious institutions and beliefs, which phantasmal and unreal as they may appear to us, were by no means unreal to our ancestors. It is easy also to see that as the psychological process was necessarily of similar general character in every branch of the human race and all over the world, so the religious evolutions—the creeds and rituals—took on much the same complexion everywhere; and, though they differed in details according to climate and other influences, ran on such remarkably parallel lines as we have noted.

Finally, to make the whole matter clear, let me repeat that this event, the inbreak of Self-consciousness, took place, or BEGAN to take place, an enormous time ago, perhaps in the beginning of the Neolithic Age. I dwell on the word “began” because I think it is probable that in its beginnings, and for a long period after, this newborn consciousness had an infantile and very innocent character, quite different from its later and more aggressive forms—just as we see self-consciousness in a little child has a charm and a grace which it loses later in a boastful or grasping boyhood and manhood. So we may understand that though self-consciousness may have begun to appear in the human race at this very early time (and more or less contemporaneously with the invention of very rude tools and unformed language), there probably did elapse a very long period—perhaps the whole of the Neolithic Age—before the evils of this second stage of human evolution came to a head. Max Muller has pointed out that among the words which are common to the various branches of Aryan language, and which therefore belong to the very early period before the separation of these branches, there are not found the words denoting war and conflict and the weapons and instruments of strife—a fact which suggests a long continuance of peaceful habit among mankind AFTER the first formation and use of language.

That the birth of language and the birth of self-consciousness were APPROXIMATELY simultaneous is a probable theory, and one favored by many thinkers; but the slow beginnings of both must have been so very protracted that it is perhaps useless to

attempt any very exact determination. Late researches seem to show that language began in what might be called TRIBAL expressions of mood and feeling (holophrases like “go-hunting-kill-bear”) without reference to individual personalities and relationships; and that it was only at a later stage that words like “I” and “Thou” came into use, and the holophrases broke up into “parts of speech” and took on a definite grammatical structure. If true, these facts point clearly to a long foreground of rude communal language, something like though greatly superior to that of the animals, preceding or preparing the evolution of Self-consciousness proper, in the forms of “I” and “Thou” and the grammar of personal actions and relations. “They show that the plural and all other forms of number in grammar arise not by multiplication of an original ‘I,’ but by selection and gradual EXCLUSION from an original collective ‘we.’” According to this view the birth of self-consciousness in the human family, or in any particular race or section of the human family, must have been equally slow and hesitating; and it would be easy to imagine, as just said, that there may have been a very long and ‘golden’ period at its beginning, before the new consciousness took on its maturer and harsher forms.

All estimates of the Time involved in these evolutions of early man are notoriously most divergent and most difficult to be sure of; but if we take 500,000 years ago for the first appearance of veritable Man (*homo primigenius*), and (following Professor W. J. Sollas) 30,000 or 40,000 years ago for the first tool-using men (*homo sapiens*) of the Chellean Age (palaeolithic), 15,000 for the rock-paintings and inscriptions of the Aurignacian and Magdalenian peoples, and 5,000 years ago for the first actual historical records that have come down to us, we may perhaps get something like a proportion between the different periods. That is to say, half a million years for the purely animal man in his different forms and grades of evolution. Then somewhere towards the end of palaeolithic or commencement of neolithic times Self-consciousness dimly beginning and, after some 10,000 years of slow germination and pre-historic culture, culminating in the actual historic period and the dawn of civilization 40 or 50 centuries ago, and to-day (we hope), reaching the climax which precedes or foretells its abatement and transformation.

No doubt many geologists and anthropologists would favor periods greatly LONGER than those here mentioned; but possibly there would be some agreement as to the RATIO to each other of the times concerned: that is, the said authorities would probably allow for a VERY long animal-man-period corresponding to the first stage; for a much shorter aggressively ‘self conscious’ period, corresponding to the Second Stage—perhaps lasting only one thirtieth or fiftieth of the time of the first period; and then—if they looked forward at all to a third stage—would be inclined for obvious reasons to attribute to that again a very extended duration.

However, all this is very speculative. To return to the difficulty about Language and the consideration of those early times when words adequate to the expression of religious or magical ideas simply did not exist, it is clear that the only available, or at any rate the CHIEF means of expression, in those times, must have consisted in gestures, in

attitudes, in ceremonial ACTIONS—in a more or less elaborate ritual, in fact. Such ideas as Adoration, Thanksgiving, confession of Guilt, placation of Wrath, Expiation, Sacrifice, Celebration of Community, sacramental Atonement, and a score of others could at that time be expressed by appropriate rites—and as a matter of fact are often so expressed even now—MORE readily and directly than by language. ‘Dancing’—when that word came to be invented—did not mean a mere flinging about of the limbs in recreation, but any expressive movements of the body which might be used to convey the feelings of the dancer or of the audience whom he represented. And so the ‘religious dance’ became a most important part of ritual.

So much for the second stage of Consciousness. Let us now pass on to the Third Stage. It is evident that the process of disruption and dissolution—disruption both of the human mind, and of society round about it, due to the action of the Second Stage—could not go on indefinitely. There are hundreds of thousands of people at the present moment who are dying of mental or bodily disease—their nervous systems broken down by troubles connected with excessive self-consciousness—selfish fears and worries and restlessness. Society at large is perishing both in industry and in warfare through the domination in its organism of the self-motives of greed and vanity and ambition. This cannot go on for ever. Things must either continue in the same strain, in which case it is evident that we are approaching a crisis of utter dissolution, OR a new element must enter in, a new inspiration of life, and we (as individuals) and the society of which we form a part, must make a fresh start. What is that new and necessary element of regeneration?

It is evident that it must be a new birth—the entry into a further stage of consciousness which must supersede the present one. Through some such crisis as we have spoken of, through the extreme of suffering, the mind of Man, AS AT PRESENT CONSTITUTED, has to die. Self-consciousness has to die, and be buried, and rise again in a new form. Probably nothing but the extreme of suffering can bring this about. And what is this new form in which consciousness has to rearise? Obviously, since the miseries of the world during countless centuries have dated from that fatal attempt to make the little personal SELF the centre of effort and activity, and since that attempt has inevitably led to disunity and discord and death, both within the mind itself and within the body of society, there is nothing left but the return to a Consciousness which shall have Unity as its foundation-principle, and which shall proceed from the direct SENSE AND PERCEPTION of such an unity throughout creation. The simple mind of Early Man and the Animals was of that character—a consciousness, so to speak, continuous through nature, and though running to points of illumination and foci of special activity in individuals, yet at no point essentially broken or imprisoned in separate compartments. (And it is this CONTINUITY of the primitive mind which enables us, as I have already explained, to understand the mysterious workings of instinct and intuition.) To some such unity-consciousness we have to return; but clearly it will be—it is not—of the simple inchoate character of the First Stage, for it has been enriched, deepened, and greatly extended by the experience of the Second Stage. It is in fact, a new order of mentality—the consciousness of the Third Stage.

In order to understand the operation and qualities of this Third Consciousness, it may be of assistance just now to consider in what more or less rudimentary way or ways it figured in the pagan rituals and in Christianity. We have seen the rude Siberyaks in North-Eastern Asia or the 'Grizzly' tribes of North American Indians in the neighborhood of Mount Shasta paying their respects and adoration to a captive bear—at once the food-animal, and the divinity of the Tribe. A tribesman had slain a bear—and, be it said, had slain it not in a public hunt with all due ceremonies observed, but privately for his own satisfaction. He had committed, therefore, a sin theoretically unpardonable; for had he not—to gratify his personal desire for food—levelled a blow at the guardian spirit of the Tribe? Had he not alienated himself from his fellows by destroying its very symbol? There was only one way by which he could regain the fellowship of his companions. He must make amends by some public sacrifice, and instead of retaining the flesh of the animal for himself he must share it with the whole tribe (or clan) in a common feast, while at the same time, tensest prayers and thanks are offered to the animal for the gift of his body for food. The Magic formula demanded nothing less than this—else dread disaster would fall upon the man who sinned, and upon the whole brotherhood. Here, and in a hundred similar rites, we see the three phases of tribal psychology—the first, in which the individual member simply remains within the compass of the tribal mind, and only acts in harmony with it; the second, in which the individual steps outside and to gratify his personal SELF performs an action which alienates him from his fellows; and the third, in which, to make amends and to prove his sincerity, he submits to some sacrifice, and by a common feast or some such ceremony is received back again into the unity of the fellowship. The body of the animal-divinity is consumed, and the latter becomes, both in the spirit and in the flesh, the Savior of the tribe.

In course of time, when the Totem or Guardian-spirit is no longer merely an Animal, or animal-headed Genius, but a quite human-formed Divinity, still the same general outline of ideas is preserved—only with gathered intensity owing to the specially human interest of the drama. The Divinity who gives his life for his flock is no longer just an ordinary Bull or Lamb, but Adonis or Osiris or Dionysus or Jesus. He is betrayed by one of his own followers, and suffers death, but rises again redeeming all with himself in the one fellowship; and the corn and the wine and the wild flesh which were his body, and which he gave for the sustenance of mankind, are consumed in a holy supper of reconciliation. It is always the return to unity which is the ritual of Salvation, and of which the symbol is the Eucharist—the second birth, the formation of “a new creature when old things are passed away.” For “Except a man be born again, he cannot see the Kingdom of God”; and “the first man is of the earth, earthly, but the second man is the Lord from heaven.” Like a strange refrain, and from centuries before our era, comes down this belief in a god who is imprisoned in each man, and whose liberation is a new birth and the beginning of a new creature: “Rejoice, ye initiates in the mystery of the liberated god”—rejoice in the thought of the hero who died as a mortal in the coffin, but rises again as Lord of all!

Who then was this “Christos” for whom the world was waiting three centuries before our era (and indeed centuries before that)? Who was this “thrice Savior” whom the Greek Gnostics acclaimed? What was the meaning of that “coming of the Son of Man” whom Daniel beheld in vision among the clouds of heaven? or of the “perfect man” who, Paul declared, should deliver us from the bondage of corruption into the glorious liberty of the children of God? What was this salvation which time after time and times again the pagan deities promised to their devotees, and which the Eleusinian and other Mysteries represented in their religious dramas with such convincing enthusiasm that even Pindar could say “Happy is he who has seen them (the Mysteries) before he goes beneath the hollow earth: that man knows the true end of life and its source divine”; and concerning which Sophocles and Aeschylus were equally enthusiastic?

Can we doubt, in the light of all that we have already said, what the answer to these questions is? As with the first blossoming of self-consciousness in the human mind came the dawn of an immense cycle of experience—a cycle indeed of exile from Eden, of suffering and toil and blind wanderings in the wilderness, yet a cycle absolutely necessary and unavoidable—so now the redemption, the return, the restoration has to come through another forward step, in the same domain. Abandoning the quest and the glorification of the separate isolated self we have to return to the cosmic universal life. It is the blossoming indeed of this ‘new’ life in the deeps of our minds which is salvation, and which all the expressions which I have just cited have indicated. It is this presence which all down the ages has been hailed as Savior and Liberator: the day-break of a consciousness so much vaster, so much more glorious, than all that has gone before that the little candle of the local self is swallowed up in its rays. It is the return home, the return into direct touch with Nature and Man—the liberation from the long exile of separation, from the painful sense of isolation and the odious nightmare of guilt and ‘sin.’ Can we doubt that this new birth—this third stage of consciousness, if we like to call it so—has to come, that it is indeed not merely a pious hope or a tentative theory, but a FACT testified to already by a cloud of witnesses in the past—witnesses shining in their own easily recognizable and authentic light, yet for the most part isolated from each other among the arid and unfruitful wastes of Civilization, like glow-worms in the dry grass of a summer night?

Since the first dim evolution of human self-consciousness an immense period, as we have said—perhaps 30,000 years, perhaps even more—has elapsed. Now, in the present day this period is reaching its culmination, and though it will not terminate immediately, its end is, so to speak, in sight. Meanwhile, during all the historical age behind us—say for the last 4,000 or 5,000 years—evidence has been coming in (partly in the religious rites recorded, partly in oracles, poems and prophetic literature) of the onset of this further illumination—“the light which never was on sea or land”—and the cloud of witnesses, scattered at first, has in these later centuries become so evident and so notable that we are tempted to believe in or to anticipate a great and general new birth, as now not so very far off. [We should, however, do well to remember, in this connection, that many a time already in the history the Millennium has been prophesied, and yet not arrived punctual to date, and to take to ourselves the words of ‘Peter,’

who somewhat grievously disappointed at the long-delayed second coming of the Lord Jesus in the clouds of heaven, wrote in his second Epistle: "There shall come in the last days scoffers, walking after their own lusts, and saying, Where is the promise of his coming? for since the fathers fell asleep, all things continue as they were from the beginning of the creation."]

I say that all through the historical age behind us there has been evidence—even though scattered—of salvation and the return of the Cosmic life. Man has never been so completely submerged in the bitter sea of self-centredness but what he has occasionally been able to dash the spray from his eyes and glimpse the sun and the glorious light of heaven. From how far back we cannot say, but from an immense antiquity come the beautiful myths which indicate this.

Cinderella, the cinder-maiden, sits unbeknown in her earthly hutch;
Gibed and jeered at she bewails her lonely fate;
Nevertheless youngest-born she surpasses her sisters and endues a garment of the sun and stars;
From a tiny spark she ascends and irradiates the universe, and is wedded to the prince of heaven.

How lovely this vision of the little maiden sitting unbeknown close to the Hearth-fire of the universe—herself indeed just a little spark from it; despised and rejected; rejected by the world, despised by her two elder sisters (the body and the intellect); yet she, the soul, though latest-born, by far the most beautiful of the three. And of the Prince of Love who redeems and sets her free; and of her wedding garment the glory and beauty of all nature and of the heavens! The parables of Jesus are charming in their way, but they hardly reach this height of inspiration.

Or the world-old myth of Eros and Psyche. How strange that here again there are three sisters (the three stages of human evolution), and the latest-born the most beautiful of the three, and the jealousies and persecutions heaped on the youngest by the others, and especially by Aphrodite the goddess of mere sensual charm. And again the coming of the unknown, the unseen Lover, on whom it is not permitted for mortals to look; and the long, long tests and sufferings and trials which Psyche has to undergo before Eros may really take her to his arms and translate her to the heights of heaven. Can we not imagine how when these things were represented in the Mysteries the world flocked to see them, and the poets indeed said, "Happy are they that see and seeing can understand?" Can we not understand how it was that the Amphictyonic decree of the second century B.C. spoke of these same Mysteries as enforcing the lesson that "the greatest of human blessings is fellowship and mutual trust"?

XV. THE ANCIENT MYSTERIES

Thus we come to a thing which we must not pass over, because it throws great light on the meaning and interpretation of all these rites and ceremonies of the great World-religion. I mean the subject of the Ancient Mysteries. And to this I will give a few pages.

These Mysteries were probably survivals of the oldest religious rites of the Greek races, and in their earlier forms consisted not so much in worship of the gods of Heaven as of the divinities of Earth, and of Nature and Death. Crude, no doubt, at first, they gradually became (especially in their Eleusinian form) more refined and philosophical; the rites were gradually thrown open, on certain conditions, not only to men generally, but also to women, and even to slaves; and in the end they influenced Christianity deeply.

There were apparently three forms of teaching made use of in these rites: these were things SAID; things SHOWN; and things PERFORMED or ACTED. I have given already some instances of things said—texts whispered for consolation in the neophyte's ear, and so forth; of the THIRD group, things enacted, we have a fair amount of evidence. There were ritual dramas or passion-plays, of which an important one dealt with the descent of Kore or Proserpine into the underworld, as in the Eleusinian representations, and her redemption and restoration to the upper world in Spring; another with the sufferings of Psyche and her rescue by Eros, as described by Apuleius—himself an initiate in the cult of Isis. There is a parody by Lucian, which tells of the birth of Apollo, the marriage of Coronis, and the coming of Aesculapius as Savior; there was the dying and rising again of Dionysus (chief divinity of the Orphic cult); and sometimes the mystery of the birth of Dionysus as a holy child. There was, every year at Eleusis, a solemn and lengthy procession or pilgrimage made, symbolic of the long pilgrimage of the human soul, its sufferings and deliverance.

“Almost always,” says Dr. Cheetham, “the suffering of a god—suffering followed by triumph—seems to have been the subject of the sacred drama.” Then occasionally to the Neophytes, after taking part in the pilgrimage, and when their minds had been prepared by an ordeal of darkness and fatigue and terrors, was accorded a revelation of Paradise, and even a vision of Transfiguration—the form of the Hierophant himself, or teacher of the Mysteries, being seen half-lost in a blaze of light. Finally, there was the eating of food and drinking of barley-drink from the sacred chest—a kind of Communion or Eucharist.

Apuleius in *The Golden Ass* gives an interesting account of his induction into the mysteries of Isis: how, bidding farewell one evening to the general congregation outside, and clothed in a new linen garment, he was handed by the priest into the inner recesses of the temple itself; how he “approached the confines of death, and having trod on the threshold of Proserpine (the Underworld), returned therefrom, being borne through all the elements. At midnight I saw the sun shining with its brilliant light: and I approached the presence of the Gods beneath and the Gods above, and stood near

and worshipped them.” During the night things happened which must not be disclosed; but in the morning he came forth “consecrated by being dressed in twelve stoles painted with the figures of animals.” He ascended a pulpit in the midst of the Temple, carrying in his right hand a burning torch, while a chaplet encircled his head, from which palm-leaves projected like rays of light. “Thus arrayed like the Sun, and placed so as to resemble a statue, on a sudden the curtains being drawn aside, I was exposed to the gaze of the multitude. After this I celebrated the most joyful day of my initiation, as my natal day [day of the New Birth] and there was a joyous banquet and mirthful conversation.”

One can hardly refuse to recognize in this account the description of some kind of ceremony which was supposed to seal the illumination of a man and his new birth into divinity—the animal origin, the circling of all experience, the terrors of death, and the resurrection in the form of the Sun, the symbol of all light and life. The very word “illumination” carries the ideas of light and a new birth with it. Reitzenstein in his very interesting book on the Greek Mysteries speaks over and over again of the illumination which was held to attend Initiation and Salvation. The doctrine of Salvation indeed was, as we have already seen, rife and widely current in the Second Century B. C. It represented a real experience, and the man who shared this experience became a divine man. In the Orphic Tablets the phrase “I am a child of earth and the starry heaven, but my race is of heaven (alone)” occurs more than once. In one of the longest of them the dead man is instructed “after he has passed the waters (of Lethe) where the white Cypress and the House of Hades are” to address these very words to the guardians of the Lake of Memory while he asks for a drink of cold water from that Lake. In another the dead person himself is thus addressed: “Hail, thou who hast endured the Suffering, such as indeed thou hadst never suffered before; thou hast become god from man!” Ecstasy was the acme of the religious life; and, what is especially interesting to us, Salvation or the divine nature was open to all men—to all, that is, who should go through the necessary stages of preparation for it.

Reitzenstein contends (p. 26) that in the Mysteries, transfiguration, salvation, and new birth were often conjoined. He says (p. 31), that in the Egyptian Osiris-cult, the Initiate acquires a nature “equal to God”, the very same expression as that used of Christ Jesus in Philippians ii. 6; he mentions Apollonius of Tyana and Sergius Paulus as instances of men who by their contemporaries were considered to have attained this nature; and he quotes Akhnaton (Pharaoh of Egypt in 1375 B.C.) as having said, “Thou art in my heart; none other knows Thee, save thy son Akhnaton; Thou hast initiated him into thy wisdom and into thy power.” He also quotes the words of Hermes (Trismegistus)—“Come unto Me, even as children to their mother’s bosom: Thou art I, and I am Thou; what is thine is mine, and what is mine is thine; for indeed I am thine image,” and refers to the dialogue between Hermes and Tat, in which they speak of the great and mystic New Birth and Union with the All—with all Elements, Plants and Animals, Time and Space.

“The Mysteries,” says Dr. Cheetham very candidly, “influenced Christianity considerably and modified it in some important respects”; and Dr. Hatch, as we have seen, not only supports this general view, but follows it out in detail. He points out that the membership of the Mystery-societies was very numerous in the earliest times, A.D.; that their general aims were good, including a sense of true religion, decent life, and brotherhood; that cleanness from crime and confession were demanded from the neophyte; that confession was followed by baptism and THAT by sacrifice; that the term xxxx (illumination) was adopted by the Christian Church as the name for the new birth of baptism; that the Christian usage of placing a seal on the forehead came from the same source; that baptism itself after a time was called a mystery; that the sacred cakes and barley-drink of the Mysteries became the milk and honey and bread and wine of the first Christian Eucharists, and that the occasional sacrifice of a lamb on the Christian altar (“whose mention is often suppressed”) probably originated in the same way. Indeed, the conception of the communion-table AS an altar and many other points of ritual gradually established themselves from these sources as time went on. It is hardly necessary to say more in proof of the extent to which in these ancient representations “things said” and “scenes enacted” forestalled the doctrines and ceremonials of Christianity.

“But what of the second group above-mentioned, the “things SHOWN”? It is not so easy naturally to get exact information concerning these, but they seem to have been specially holy objects, probably things connected with very ancient rituals in the past—such as sacred stones, old and rude images of the gods, magic nature-symbols, like that half-disclosed ear of corn above-mentioned (Ch. V.). “In the Temple of Isis at Philae,” says Dr. Cheetham, “the dead body of Osiris is represented with stalks of corn springing from it, which a priest waters from a vessel. An inscription says: ‘This is the form of him whom we may not name, Osiris of the Mysteries who sprang from the returning waters’ [the Nile].” Above all, no doubt, there were images of the phallus and the vulva, the great symbols of human fertility. We have seen (Ch. XII) that the lingam and the yoni are, even down to to-day, commonly retained and honored as holy objects in the S. Indian Temples, and anointed with oil (some of them) for a very practical reason. Sir J. G. Frazer, in his lately published volumes on The Folk-lore of the Old Testament, has a chapter (in vol. ii) on the very numerous sacred stones of various shapes and sizes found or spoken of in Palestine and other parts of the world. Though uncertain as to the meaning of these stones he mentions that they are “frequently, though not always, UPRIGHT.” Anointing them with oil, he assures us, “is a widespread practice, sometimes by women who wish to obtain children.” And he concludes the chapter by saying: “The holy stone at Bethel was probably one of those massive standing stones or rough pillars which the Hebrews called masseboth, and which, as we have seen, were regular adjuncts of Canaanite and early Israelitish sanctuaries.” We have already mentioned the pillars Jachin and Boaz which stood before the Temple of Solomon, and which had an acknowledged sexual significance; and so it seems probable that a great number of these holy stones had a similar meaning. Following this clue it would appear likely that the lingam thus anointed and worshipped in the Temples of India and elsewhere IS the original cristos adored by the human race

from the very beginning, and that at a later time, when the Priest and the King, as objects of worship, took the place of the Lingam, THEY also were anointed with the chrism of fertility. That the exhibition of these emblems should be part of the original 'Mystery'-rituals was perfectly natural—especially because, as we have explained already old customs often continued on in a quite naive fashion in the rituals, when they had come to be thought indecent or improper by a later public opinion; and (we may say) was perfectly in order, because there is plenty of evidence to show that in SAVAGE initiations, of which the Mysteries were the linear descendants, all these things WERE explained to the novices, and their use actually taught. No doubt also there were some representations or dramatic incidents of a fairly coarse character, as deriving from these ancient sources. It is, however, quaint to observe how the mere mention of such things has caused an almost hysterical commotion among the critics of the Mysteries—from the day of the early Christians who (in order to belaud their own religion) were never tired of abusing the Pagans, onward to the present day when modern scholars either on the one hand follow the early Christians in representing the Mysteries as sinks of iniquity or on the other (knowing this charge could not be substantiated except in the period of their final decadence) take the line of ignoring the sexual interest attaching to them as non-existent or at any rate unworthy of attention. The good Archdeacon Cheetham, for instance, while writing an interesting book on the Mysteries passes by this side of the subject ALMOST as if it did not exist; while the learned Dr. Farnell, overcome apparently by the weight of his learning, and unable to confront the alarming obstacle presented by these sexual rites and aspects, hides himself behind the rather non-committal remark (speaking of the Eleusinian rites) "we have no right to imagine any part of this solemn ceremony as coarse or obscene." As Nature, however, has been known (quite frequently) to be coarse or obscene, and as the initiators of the Mysteries were probably neither 'good' nor 'learned,' but were simply anxious to interpret Nature as best they could, we cannot find fault with the latter for the way they handled the problem, nor indeed well see how they could have handled it better.

After all it is pretty clear that the early peoples saw in Sex the great cohesive force which kept (we will not say Humanity but at any rate) the Tribe together, and sustained the race. In the stage of simple Consciousness this must have been one of the first things that the budding intellect perceived. Sex became one of the earliest divinities, and there is abundant evidence that its organs and processes generally were invested with a religious sense of awe and sanctity. It was in fact the symbol (or rather the actuality) of the permanent undying life of the race, and as such was sacred to the uses of the race. Whatever taboos may have, among different peoples, guarded its operations, it was not essentially a thing to be concealed, or ashamed of. Rather the contrary. For instance the early Christian writer, Hippolytus, Bishop of Pontus (A.D. 200), in his Refutation of all Heresies, Book V, says that the Samothracian Mysteries, just mentioned, celebrate Adam as the primal or archetypal Man eternal in the heavens; and he then continues: "Habitually there stand in the temple of the Samothracians two images of naked men having both hands stretched aloft towards heaven, and their pudenda turned upwards, as is also the case with the statue of Mercury on Mt. Cyllene. And the

aforesaid images are figures of the primal man, and of that spiritual one that is born again, in every respect of the same substance with that [first] man.”

This extract from Hippolytus occurs in the long discourse in which he ‘exposes’ the heresy of the so-called Naassene doctrines and mysteries. But the whole discourse should be read by those who wish to understand the Gnostic philosophy of the period contemporary with and anterior to the birth of Christianity. A translation of the discourse, carefully analyzed and annotated, is given in G. R. S. Mead’s *Thrice-greatest Hermes* (vol. i); and Mead himself, speaking of it, says (p. 141): “The claim of these Gnostics was practically that the good news of the Christ [the Christos] was the consummation of the inner doctrine of the Mystery-institutions of all the nations; the end of them all being the revelation of the Mystery of Man.” Further, he explains that the Soul, in these doctrines, was regarded as synonymous with the Cause of All; and that its loves were twain—of Aphrodite (or Life), and of Persephone (or Death and the other world). Also that Attis, abandoning his sex in the worship of the Mother-Goddess (Dea Syria), ascends to Heaven—a new man, Male-female, and the origin of all things: the hidden Mystery being the Phallus itself, erected as Hermes in all roads and boundaries and temples, the Conductor and Reconductor of Souls.

All this may sound strange, but one may fairly say that it represented in its degree, and in that first ‘unfallen’ stage of human thought and psychology, a true conception of the cosmic Life, and indeed a conception quite sensible and admirable, until, of course, the Second Stage brought corruption. No sooner was this great force of the cosmic life diverted from its true uses of Generation and Regeneration and appropriated by the individual to his own private pleasure—no sooner was its religious character as a tribal service, (often rendered within the Temple precincts) lost sight of or degraded into a commercial transaction—than every kind of evil fell upon mankind. *Corruptio optimi pessima*. It must be remembered too that simultaneous with this sexual disruption occurred the disruption of other human relations; and we cease to be surprised that disease and selfish passions, greed, jealousy, slander, cruelty, and wholesale murder, raged—and have raged ever since

But for the human soul—whatever its fate, and whatever the dangers and disasters that threaten it—there is always redemption waiting. As we saw in the last chapter, this corruption of Sex led (quite naturally) to its denial and rejection; and its denial led to the differentiation from it of Love. Humanity gained by the enthronement And deification of Love, pure and undefiled, and (for the time being) exalted beyond this mortal world, and free from all earthly contracts. But again in the end, the divorce thus introduced between the physical and the spiritual led to the crippling of both. Love relegated, so to speak, to heaven as a purely philanthropical, pious and ‘spiritual’ affair, became exceedingly DULL; and sex, remaining on earth, but deserted by the redeeming presence, fell into mere “carnal curiosity and wretchedness of unclean living.” Obviously for the human race there remains nothing, in the final event, but the reconciliation of the physical and the spiritual, and after many sufferings, the reunion of Eros and Psyche.

There is still, however, much to be said about the Third State of Consciousness. Let us examine into it a little more closely. Clearly, since it is a new state, and not merely an extension of a former one, one cannot arrive at it by argument derived from the Second state, for all conscious Thought such as we habitually use simply keeps us IN the Second state. No animal or quite primitive man could possibly understand what we mean by Self-consciousness till he had experienced it. Mere argument would not enlighten him. And so no one in the Second state can quite realize the Third state till he has experienced it. Still, explanations may help us to perceive in what direction to look, and to recognize in some of our experiences an approach to the condition sought.

Evidently it is a mental condition in some respects more similar to the first than to the second stage. The second stage of human psychologic evolution is an aberration, a divorce, a parenthesis. With its culmination and dismissal the mind passes back into the simple state of union with the Whole. (The state of Ekagrata in the Hindu philosophy: one-pointedness, singleness of mind.) And the consciousness of the Whole, and of things past and things to come and things far around—which consciousness had been shut out by the concentration on the local self—begins to return again. This is not to say, of course, that the excursus in the second stage has been a loss and a defect. On the contrary, it means that the Return is a bringing of all that has been gained during the period of exile (all sorts of mental and technical knowledge and skill, emotional developments, finesse and adaptability of mind) BACK into harmony with the Whole. It means ultimately a great gain. The Man, perfected, comes back to a vastly extended harmony. He enters again into a real understanding and confidential relationship with his physical body and with the body of the society in which he dwells—from both of which he has been sadly divorced; and he takes up again the broken thread of the Cosmic Life.

Everyone has noticed the extraordinary consent sometimes observable among the members of an animal community—how a flock of 500 birds (e. g. starlings) will suddenly change its direction of flight—the light on the wings shifting INSTANTANEOUSLY, as if the impulse to veer came to all at the same identical moment; or how bees will swarm or otherwise act with one accord, or migrating creatures (lemmings, deer, gossamer spiders, winged ants) the same. Whatever explanation of these facts we favor—whether the possession of swifter and finer means of external communication than we can perceive, or whether a common and inner sensitivity to the genius of the Tribe (the “Spirit of the Hive”) or to the promptings of great Nature around—in any case these facts of animal life appear to throw light on the possibilities of an accord and consent among the members of emaciated humanity, such as we dream of now, and seem to bid us have good hope for the future.

It is here, perhaps, that the ancient worship of the Lingam comes in. The word itself is apparently connected with our word ‘link,’ and has originally the same meaning. It is the link between the generations. Beginning with the worship of the physical Race-life,

the course of psychologic evolution has been first to the worship of the Tribe (or of the Totem which represents the tribe); then to the worship of the human-formed God of the tribe—the God who dies and rises again eternally, as the tribe passes on eternal—though its members perpetually perish; then to the conception of an undying Savior, and the realization and distinct experience of some kind of Super-consciousness which does certainly reside, more or less hidden, in the deeps of the mind, and has been waiting through the ages for its disclosure and recognition. Then again to the recognition that in the sacrifices, the Slayer and the Slain are one—the strange and profoundly mystic perception that the God and the Victim are in essence the same—the dedication of ‘Himself to Himself’ and simultaneously with this the interpretation of the Eucharist as meaning, even for the individual, the participation in Eternal Life—the continuing life of the Tribe, or ultimately of Humanity. The Tribal order rises to Humanity; love ascends from the lingam to yogam, from physical union alone to the union with the Whole—which of course includes physical and all other kinds of union. No wonder that the good St. Paul, witnessing that extraordinary whirlpool of beliefs and practices, new and old, there in the first century A.D.—the unabashed adoration of sex side by side with the transcendental devotions of the Vedic sages and the Gnostics—became somewhat confused himself and even a little violent, scolding his disciples (I Cor. x. 21) for their indiscriminating acceptance, as it seemed to him, of things utterly alien and antagonistic. “Ye cannot drink the cup of the Lord and the cup of devils: ye cannot be partakers of the Lord’s table and the table of devils.”

Every careful reader has noticed the confusedness of Paul’s mind and arguments. Even taking only those Epistles (Galatians, Romans and Corinthians) which the critics assign to his pen, the thing is observable—and some learned Germans even speak of TWO Pauls. But also the thing is quite natural. There can be little doubt that Paul of Tarsus, a Jew brought up in the strictest sect of the Pharisees, did at some time fall deeply under the influence of Greek thought, and quite possibly became an initiate in the Mysteries. It would be difficult otherwise to account for his constant use of the Mystery-language. Reitzenstein says (p. 59): “The hellenistic religious literature MUST have been read by him; he uses its terms, and is saturated with its thoughts (see Rom. vi. 1-14.” And this conjoined with his Jewish experience gave him creative power. “A great deal in his sentiment and thought may have REMAINED Jewish, but to his Hellenism he was indebted for his love of freedom and his firm belief in his apostleship.” He adopts terms which were in use among the hellenistic sects of the time; and he writes, as in Romans vi. 4, 5, about being “buried” with Christ or “planted” in the likeness of his death, in words which might well have been used (with change of the name) by a follower of Attis or Osiris after witnessing the corresponding ‘mysteries’; certainly the allusion to these ancient deities would have been understood by every religionist of that day. These few points are sufficient to accentuate the two elements in Paul, the Jewish and the Greek, and to explain (so far) the seeming confusion in his utterances. Further it is interesting to note—as showing the pagan influences in the N. T. writings—the degree to which the Epistle to Philemon (ascribed to Paul) is FULL—short as it is—of expressions like PRISONER of the Lord, FELLOW SOLDIER, CAPTIVE or BONDMAN, which were so common at the time as to be almost a cant in

Mithraism and the allied cults. In I Peter ii. 2, we have the verse "As newborn babes, desire ye the sincere MILK of the word, that ye may grow thereby." And again we may say that no one in that day could mistake the reference herein contained to old initiation ceremonies and the new birth (as described in Chapter VIII above), for indeed milk was the well-known diet of the novice in the Isis mysteries, as well as On some savage tribes) of the Medicine-man when practising his calling.

And here too Democracy comes in—strangely foreboded from the first in all this matter. Not only does the Third Stage bring illumination, intuitive understanding of processes in Nature and Humanity, sympathy with the animals, artistic capacity, and so forth, but it necessarily brings a new Order of Society. A preposterous—one may almost say a hideous—social Age is surely drawing to its end, The debacle we are witnessing today all over Europe (including the, British Islands), the break-up of old institutions, the generally materialistic outlook on life, the coming to the surface of huge masses of diseased and fatuous populations, the scum and dregs created by the past order, all point to the End of a Dispensation. Protestantism and Commercialism, in the two fields of religion and daily life have, as I have indicated before, been occupied in concentrating the mind of each man solely on his OWN welfare, the salvation of his OWN soul or body. These two forces have therefore been disruptive to the last degree; they mark the culmination of the Self-conscious Age—a culmination in War, Greed, Materialism, and the general principle of Devil- take-the-hindmost—and the clearing of the ground for the new order which is to come. So there is hope for the human race. Its evolution is not all a mere formless craze and jumble. There is an inner necessity by which Humanity unfolds from one degree or plane of consciousness to another. And if there has been a great 'Fall' or Lapse into conflict and disease and 'sin' and misery, occupying the major part of the Historical period hitherto, we see that this period is only brief, so to speak, in comparison with the whole curve of growth and expansion. We see also that, as I have said before, the belief in a state of salvation or deliverance has in the past ages never left itself quite without a witness in the creeds and rituals and poems and prophecies of mankind. Art, in some form or other, as an activity or inspiration dating not from the conscious Intellect, but from deeper regions of sub-conscious feeling and intuition, has continually come to us as a message from and an evidence of the Third stage or state, and as a promise of its more complete realization under other conditions.

Through the long night-time where the Nations wander
From Eden past to Paradise to be,
Art's sacred flowers, like fair stars shining yonder,
Alone illumine Life's obscurity.

O gracious Artists, out of your deep hearts
'Tis some great Sun, I doubt, by men unguessed,
Whose rays come struggling thus, in slender darts,
To shadow what Is, till Time shall manifest.

With the Cosmic stage comes also necessarily the rehabilitation of the WHOLE of Society in one fellowship (the true Democracy). Not the rule or domination of one class or caste—as of the Intellectual, the Pious, the Commercial or the Military—but the fusion or at least consentaneous organization of ALL (as in the corresponding functions of the human Body). Class rule has been the mark of that second period of human evolution, and has inevitably given birth during that period to wars and self-aggrandizements of classes and sections, and their consequent greeds and tyrannies over other classes and sections. It is not found in the primitive human tribes and societies, and will not be found in the final forms of human association. The liberated and emancipated Man passes unconstrained and unconstraining through all grades and planes of human fellowship, equal and undisturbed, and never leaving his true home and abiding place in the heart of all. Equally necessarily with the rehabilitation of Society as an entirety will follow the rehabilitation of the entire physical body IN each member of Society. We have spoken already of Nakedness: its meaning and likely extent of adoption (Ch. XII). The idea that the head and the hands are the only seemly and presentable members of the organism, and that the other members are unworthy and indecent, is obviously as onesided and lopsided as that which honors certain classes in the commonwealth and despises others. Why should the head brag of its ascendancy and domination, and the heart be smothered up and hidden? It will only be a life far more in the open air than that which we lead at present, which will restore the balance and ultimately bring us back to sanity and health.

XVI. THE EXODUS OF CHRISTIANITY

We have dealt with the Genesis of Christianity; we now come to the Exodus. For that Christianity can CONTINUE to hold the field of Religion in the Western World is neither probable nor desirable. It is true, as I have remarked already, that there is a certain trouble about defining what we mean by "Christianity" similar to that about the word "Civilization." If we select out of the great mass of doctrines and rites favored by the various Christian Churches just those which commend themselves to the most modern and humane and rational human mind and choose to call that resulting (but rather small) body of belief and practice 'Christianity' we are, of course, entitled to do so, and to hope (as we do hope) that this residuum will survive and go forward into the future. But this sort of proceeding is hardly fair and certainly not logical. It enables Christianity to pose as an angel of light while at the same time keeping discreetly out of sight all its own abominations and deeds of darkness. The Church—which began its career by destroying, distorting and denying the pagan sources from which it sprang; whose bishops and other ecclesiastics assassinated each other in their theological rancour "of wild beasts," which encouraged the wicked folly of the Crusades—especially the Children's Crusades—and the shameful murders of the Manicheans, the Albigenses, and the Huguenots; which burned at the stake thousands and thousands of poor 'witches' and 'heretics'; which has hardly ever spoken a generous word in favor or defence of the animals; which in modern times has supported vivisection as against the latter, Capitalism and Commercialism as against the poorer classes of mankind; and whose priests in the forms of its various sects, Greek or Catholic, Lutheran or Protestant, have in these last days rushed forth to urge the nations to slaughter each other with every diabolical device of Science, and to glorify the war-cry of Patriotism in defiance of the principle of universal Brotherhood—such a Church can hardly claim to have established the angelic character of its mission among mankind! And if it be said—as it often IS SAID: "Oh! but you must go back to the genuine article, and the Church's real origin and one foundation in the person and teaching of Jesus Christ," then indeed you come back to the point which this book, as above, enforces: namely, that as to the person of Jesus, there is no CERTAINTY at all that he ever existed; and as to the teaching credited to him, it is certain that that comes down from a period long anterior to 'Christianity' and is part of what may justly be called a very ancient World-religion. So, as in the case of 'Civilization,' we are compelled to see that it is useless to apply the word to some ideal state of affairs or doctrine (an ideal by no means the same in all people's minds, or in all localities and times), but that the only reasonable thing to do is to apply it in each case to a HISTORICAL PERIOD. In the case of Christianity the historical period has lasted nearly 2,000 years, and, as I say, we can hardly expect or wish that it should last much longer.

The very thorough and careful investigation of religious origins which has been made during late years by a great number of students and observers undoubtedly tends to show that there has been something like a great World-religion coming down the centuries from the remotest times and gradually expanding and branching as it has come—that is to say that the similarity (in ESSENCE though not always in external

detail) between the creeds and rituals of widely sundered tribes and peoples is so great as to justify the view—advanced in the present volume—that these creeds and rituals are the necessary outgrowths of human psychology, slowly evolving, and that consequently they have a common origin and in their various forms a common expression. Of this great World-religion, so coming down, Christianity is undoubtedly a branch, and an important branch. But there have been important branches before; and while it may be true that Christianity emphasizes some points which may have been overlooked or neglected in the Vedic teachings or in Buddhism, or in the Persian and Egyptian and Syrian cults, or in Mahomedanism, and so forth, it is also equally true that Christianity has itself overlooked or neglected valuable points in these religions. It has, in fact, the defects of its qualities. If the World-religion is like a great tree, one cannot expect or desire that all its branches should be directed towards the same point of the compass.

Reinach, whose studies of religious origins are always interesting and characterized by a certain Gallic grace and nettete, though with a somewhat Jewish non-perception of the mystic element in life, defines Religion as a combination of animism and scruples. This is good in a way, because it gives the two aspects of the subject: the inner, animism, consisting of the sense of contact with more or less intelligent beings moving in Nature; and the outer, consisting in scruples or taboos. The one aspect shows the feeling which INSPIRES religion, the other, the checks and limitations which DEFINE it and give birth to ritual. But like most anthropologists he (Reinach) is a little TOO patronizing towards the “poor Indian with untutored mind.” He is sorry for people so foolish as to be animistic in their outlook, and he is always careful to point out that the scruples and taboos were quite senseless in their origin, though occasionally (by accident) they turned out useful. Yet—as I have said before—Animism is a perfectly sensible, logical and NECESSARY attitude of the human mind. It is a necessary attribute of man’s psychical nature, by which he projects into the great World around him the image of his own mind. When that mind is in a very primitive, inchoate, and fragmentary condition, the images so projected are those of fragmentary intelligences (‘spirits,’ gnomes, etc.—the age of magic); when the mind rises to distinct consciousness of itself the reflections of it are anthropomorphic ‘gods’; when finally it reaches the universal or cosmic state it perceives the presence of a universal Being behind all phenomena—which Being is indeed itself—”Himself to Himself.” If you like you may call the whole process by the name of Animism. It is perfectly sensible throughout. The only proviso is that you should also be sensible, and distinguish the different stages in the process.

Jane Harrison makes considerable efforts to show that Religion is primarily a reflection of the SOCIAL Conscience (see Themis, pp. 482-92)—that is, that the sense in Man of a “Power that makes for righteousness” outside (and also inside) him is derived from his feeling of continuity with the Tribe and his instinctive obedience to its behests, confirmed by ages of collective habit and experience. He cannot in fact sever the navel-string which connects him with his tribal Mother, even though he desires to do so. And no doubt this view of the origin of Religion is perfectly correct. But it must be pointed

out that it does not by any means exclude the view that religion derives also from an Animism by which man recognizes in general Nature his foster-mother and feels himself in closest touch with HER. Which may have come first, the Social affiliation or the Nature affiliation, I leave to the professors to determine. The term Animism may, as far as I can see, be quite well applied to the social affiliation, for the latter is evidently only a case in which the individual projects his own degree of consciousness into the human group around him instead of into the animals or the trees, but it is a case of which the justice is so obvious that the modern man can intellectually seize and understand it, and consequently he does not tar it with the 'animistic' brush.

And Miss Harrison, it must be noticed, does, in other passages of the same book (see Themis, pp. 68, 69), admit that Religion has its origin not only from unity with the Tribe but from the sense of affiliation to Nature—the sense of “a world of unseen power lying behind the visible universe, a world which is the sphere, as will be seen, of magical activity and the medium of mysticism. The mystical element, the oneness and continuousness comes out very clearly in the notion of Wakonda among the Sioux Indians. . . . The Omahas regarded all animate and inanimate forms, all phenomena, as pervaded by a common life, which was continuous and similar to the will-power they were conscious of in themselves. This mysterious power in all things they called Wakonda, and through it all things were related to man, and to each other. In the idea of the continuity of life, a relation was maintained between the seen and the unseen, the dead and the living, and also between the fragment of anything and its entirety.” Thus our general position is confirmed, that Religion in its origin has been INSPIRED by a deep instinctive conviction or actual sense of continuity with a being or beings in the world around, while it has derived its FORM and ritual by slow degrees from a vast number of taboos, generated in the first instance chiefly by superstitious fears, but gradually with the growth of reason and observation becoming simplified and rationalized into forms of use. On the one side there has been the positive impulse—of mere animal Desire and the animal urge of self-expression; on the other there has been the negative force of Fear based on ignorance—the latter continually carving, moulding and shaping the former. According to this an organized study and classification of taboos might yield some interesting results; because indeed it would throw light on the earliest forms of both religion and science. It would be seen that some taboos, like those of CONTACT (say with a menstruous woman, or a mother-in-law, or a lightning-struck tree) had an obvious basis of observation, justifiable but very crude; while others, like the taboo against harming an enemy who had contracted blood-friendship with one of your own tribe, or against giving decent burial to a murderer, were equally rough and rude expressions or indications of the growing moral sentiment of mankind. All the same there would be left, in any case, a large residuum of taboos which could only be judged as senseless, and the mere rubbish of the savage mind.

So much for the first origins of the World-religion; and I think enough has been said in the various chapters of this book to show that the same general process has obtained throughout. Man, like the animals, began with this deep, subconscious sense of unity with surrounding Nature. When this became (in Man) fairly conscious, it led to Magic

and Totemism. More conscious, and it branched, on the one hand, into figures of Gods and definite forms of Creeds, on the other into elaborate Scientific Theories—the latter based on a strong INTELLECTUAL belief in Unity, but fervently denying any ‘anthropomorphic’ or ‘animistic’ SENSE of that unity. Finally, it seems that we are now on the edge of a further stage when the theories and the creeds, scientific and religious, are on the verge of collapsing, but in such a way as to leave the sense and the perception of Unity—the real content of the whole process—not only undestroyed, but immensely heightened and illuminated. Meanwhile the taboos—of which there remain some still, both religious and scientific—have been gradually breaking up and merging themselves into a reasonable and humane order of life and philosophy.

I have said that out of this World-religion Christianity really sprang. It is evident that the time has arrived when it must either acknowledge its source and frankly endeavor to affiliate itself to the same, or failing that must perish. In the first case it will probably have to change its name; in the second the question of its name ‘will interest it no more.’

With regard to the first of these alternatives, I might venture—though with indifference—to make a few suggestions. Why should we not have—instead of a Holy Roman Church—a Holy HUMAN Church, rehabilitating the ancient symbols and rituals, a Christianity (if you still desire to call it so) frankly and gladly acknowledging its own sources? This seems a reasonable and even feasible proposition. If such a church wished to celebrate a Mass or Communion or Eucharist it would have a great variety of rites and customs of that kind to select from; those that were not appropriate for use in our times or were connected with the worship of strange gods need not be rejected or condemned, but could still be commented on and explained as approaches to the same idea—the idea of dedication to the Common Life, and of reinvigoration in the partaking of it. If the Church wished to celebrate the Crucifixion or betrayal of its Founder, a hundred instances of such celebrations would be to hand, and still the thought that has underlain such celebrations since the beginning of the world could easily be disentangled and presented in concrete form anew. In the light of such teaching expressions like “I know that my Redeemer liveth” would be traced to their origin, and men would understand that notwithstanding the mass of rubbish, cant and humbug which has collected round them they really do mean something and represent the age-long instinct of Humanity feeling its way towards a more extended revelation, a new order of being, a third stage of consciousness and illumination. In such a Church or religious organization EVERY quality of human nature would have to be represented, every practice and custom allowed for and its place accorded—the magical and astronomical meanings, the rites connected with sun-worship, or with sex, or with the worship of animals; the consecration of corn and wine and other products of the ground, initiations, sacrifices, and so forth—all (if indeed it claimed to be a World-religion) would have to be represented and recognized. For they all have their long human origin and descent in and through the pagan creeds, and they all have penetrated into and become embodied to some degree in Christianity. Christianity therefore, as I say, must either now come frankly forward and, acknowledging its parentage from

the great Order of the past, seek to rehabilitate THAT and carry mankind one step forward in the path of evolution—or else it must perish. There is no other alternative.

Let me give an instance of how a fragment of ancient ritual which has survived from the far Past and is still celebrated, but with little intelligence or understanding, in the Catholic Church of to-day, might be adopted in such a Church as I have spoken of, interpreted, and made eloquent of meaning to modern humanity. When I was in Ceylon nearly 30 years ago I was fortunate enough to witness a night-festival in a Hindu Temple—the great festival of Taipusam, which takes place every year in January. Of course, it was full moon, and great was the blowing up of trumpets in the huge courtyard of the Temple. The moon shone down above from among the fronds of tall coco-palms, on a dense crowd of native worshipers—men and a few women—the men for the most part clad in little more than a loin-cloth, the women picturesque in their colored saris and jewelled ear and nose rings. The images of Siva and two other gods were carried in procession round and round the temple—three or four times; nautch girls danced before the images, musicians, blowing horns and huge shells, or piping on flageolets or beating tom-toms, accompanied them. The crowd carrying torches or high crates with flaming coco-nuts, walked or rather danced along on each side, elated and excited with the sense of the present divinity, yet pleasantly free from any abject awe. The whole thing indeed reminded one of some bas-relief of a Bacchanalian procession carved on a Greek sarcophagus—and especially so in its hilarity and suggestion of friendly intimacy with the god. There were singing of hymns and the floating of the chief actors on a raft round a sacred lake. And then came the final Act. Siva, or his image, very weighty and borne on the shoulders of strong men, was carried into the first chamber or hall of the Temple and placed on an altar with a curtain hanging in front. The crowd followed with a rush; and then there was more music, recital of hymns, and reading from sacred books. From where we stood we could see the rite which was performed behind the curtain. Two five-branched candlesticks were lighted; and the manner of their lighting was as follows. Each branch ended in a little cup, and in the cups five pieces of camphor were placed, all approximately equal in size. After offerings had been made, of fruit, flowers and sandalwood, the five camphors in each candlestick were lighted. As the camphor flames burned out the music became more wild and exciting, and then at the moment of their extinction the curtains were drawn aside and the congregation outside suddenly beheld the god revealed and in a blaze of light. This burning of camphor was, like other things in the service, emblematic. The five lights represent the five senses. Just as camphor consumes itself and leaves no residue behind, so should the five senses, being offered to the god, consume themselves and disappear. When this is done, that happens in the soul which was now figured in the ritual—the God is revealed in the inner light.

We are familiar with this parting or rending of the veil. We hear of it in the Jewish Temple, and in the Greek and Egyptian Mysteries. It had a mystically religious, and also obviously sexual, signification. It occurs here and there in the Roman Catholic ritual. In Spain, some ancient Catholic ceremonials are kept up with a brilliance and splendor hardly found elsewhere in Europe. In the Cathedral, at Seville the service of the

Passion, carried out on Good Friday with great solemnity and accompanied with fine music, culminates on the Saturday morning—i.e. in the interval between the Crucifixion and the Resurrection—in a spectacle similar to that described in Ceylon. A rich velvet-black curtain hangs before the High Altar. At the appropriate moment and as the very emotional strains of voices and instruments reach their climax in the “Gloria in Excelsis,” the curtain with a sudden burst of sound (thunder and the ringing of all the bells) is rent asunder, and the crucified Jesus is seen hanging there revealed in a halo of glory.

There is also held at Seville Cathedral and before the High Altar every year, the very curious Dance of the Seises (sixes), performed now by 16 instead of (as of old) by 12 boys, quaintly dressed. It seems to be a survival of some very ancient ritual, probably astronomical, in which the two sets of six represent the signs of the Zodiac, and is celebrated during the festivals of Corpus Christi, the Immaculate Conception, and the Carnival.

Numerous instances might of course be adduced of how a Church aspiring to be a real Church of Humanity might adopt and re-create the rituals of the past in the light of a modern inspiration. Indeed the difficulty would be to limit the process, for EVERY ancient ritual, we can now see, has had a meaning and a message, and it would be a real joy to disentangle these and to expose the profound solidarity of humanity and aspiration from the very dawn of civilization down to the present day. Nor would it be necessary to imagine any Act of Uniformity or dead level of ceremonial in the matter. Different groups might concentrate on different phases of religious thought and practice. The only necessity would be that they should approach the subject with a real love of Humanity in their hearts and a real desire to come into touch with the deep inner life and mystic growing-pains of the souls of men and women in all ages. In this direction M. Loisy has done noble and excellent work; but the dead weight and selfish blinkerdom of the Catholic organization has hampered him to that degree that he has been unable to get justice done to his liberalizing designs—or, perhaps, even to reveal the full extent of them. And the same difficulty will remain. On the one hand no spiritual movement which does not take up the attitude of a World-religion has now in this age, any chance of success; on the other, all the existing Churches—whether Roman Catholic, or Greek, or Protestant or Secularist—whether Christian or Jewish or Persian or Hindu—will in all probability adopt the same blind and blinkered and selfish attitude as that described above, and so disqualify themselves for the great role of world-wide emancipation, which some religion at some time will certainly have to play. It is the same difficulty which is looming large in modern World-politics, where the local selfishness and vainglorious “patriotisms” of the Nations are sadly impeding and obstructing the development of that sense of Internationalism and Brotherhood which is the clearly indicated form of the future, and which alone can give each nation deliverance from fear, and a promise of growth, and the confident assurance of power.

I say that Christianity must either frankly adopt this generous attitude and confess itself a branch of the great World-religion, anxious only to do honor to its source—or else it must perish and pass away. There is no other alternative. The hour of its Exodus has come. It may be, of course, that neither the Christian Church nor any branch of it, nor any other religious organization, will step into the gap. It may be—but I do not think this is likely—that the time of rites and ceremonies and formal creeds is PAST, and churches of any kind will be no more needed in the world: not likely, I say, because of the still far backwardness of the human masses, and their considerable dependence yet on laws and forms and rituals. Still, if it should prove that that age of dependence IS really approaching its end, that would surely be a matter for congratulation. It would mean that mankind was moving into a knowledge of the REALITY which has underlain these outer shows—that it was coming into the Third stage of its Consciousness. Having found this there would be no need for it to dwell any longer in the land of superstitions and formulae. It would have come to the place of which these latter are only the outlying indications.

It may, therefore, happen—and this quite independently of the growth of a World-cult such as I have described, though by no means in antagonism to it—that a religious philosophy or Theosophy might develop and spread, similar to the Gnonam of the Hindus or the Gnomsis of the pre-Christian sects, which would become, first among individuals and afterwards among large bodies over the world, the religion of—or perhaps one should say the religious approach to the Third State. Books like the Upanishads of the Vedic seers, and the Bhagavat Gita, though garbled and obscured by priestly interferences and mystifications, do undoubtedly represent and give expression to the highest utterance of religious experience to be found anywhere in the world. They are indeed the manuals of human entrance into the cosmic state. But as I say, and as has happened in the case of other sacred books, a vast deal of rubbish has accreted round their essential teachings, and has to be cleared away. To go into a serious explication of the meaning of these books would be far too large an affair, and would be foreign to the purpose of the present volume; but I have in the Appendix below inserted two papers, (on “Rest” and “The Nature of the Self”) containing the substance of lectures given on the above books. These papers or lectures are couched in the very simplest language, free from Sanskrit terms and the usual ‘jargon of the Schools,’ and may, I hope, even on that account be of use in familiarizing readers who are not specially STUDENTS with the ideas and mental attitudes of the cosmic state. Non-differentiation (Advaita) is the root attitude of the mind inculcated.

We have seen that there has been an age of non-differentiation in the Past—non-differentiation from other members of the Tribe, from the Animals, from Nature and the Spirit or Spirits of nature; why should there not arise a similar sense of non-differentiation in the FUTURE—similar but more extended more intelligent? Certainly this WILL arrive, in its own appointed time. There will be a surpassing of the bounds of separation and division. There will be a surpassing of all Taboos. We have seen the use and function of Taboos in the early stages of Evolution and how progress and growth have been very much a matter of their gradual extinction and assimilation into the general body of

rational thought and feeling. Unreasoning and idiotic taboos still linger, but they grow weaker. A new Morality will come which will shake itself free from them. The sense of kinship with the animals (as in the old rituals) will be restored; the sense of kinship with all the races of mankind will grow and become consolidated; the sense of the defilement and impurity of the human body will (with the adoption of a generally clean and wholesome life) pass away; and the body itself will come to be regarded more as a collection of shrines in which the gods may be worshiped and less as a mere organ of trivial self-gratifications; there will be no form of Nature, or of human life or of the lesser creatures, which will be barred from the approach of Man or from the intimate and penetrating invasion of his spirit; and as in certain ceremonies and after honorable toils and labors a citizen is sometimes received into the community of his own city, so the emancipated human being on the completion of his long long pilgrimage on Earth will be presented with the Freedom of the Universe.

XVII. CONCLUSION

In conclusion there does not seem much to say, except to accentuate certain points which may still appear doubtful or capable of being understood.

The fact that the main argument of this volume is along the lines of psychological evolution will no doubt commend it to some, while on the other hand it will discredit the book to others whose eyes, being fixed on purely MATERIAL causes, can see no impetus in History except through these. But it must be remembered that there is not the least reason for SEPARATING the two factors. The fact that psychologically man has evolved from simple consciousness to self-consciousness, and is now in process of evolution towards another and more extended kind of consciousness, does not in the least bar the simultaneous appearance and influence of material evolution. It is clear indeed that the two must largely go together, acting and reacting on each other. Whatever the physical conditions of the animal brain may be which connect themselves with simple (unreflected and unreflecting) consciousness, it is evident that these conditions—in animals and primitive man—lasted for an enormous period, before the distinct consciousness of the individual and separate SELF arose. This second order of consciousness seems to have germinated at or about the same period as the discovery of the use of Tools (tools of stone, copper, bronze, &c.), the adoption of picture-writing and the use of reflective words (like “I” and “Thou”); and it led on to the appreciation of gold and of iron with their ornamental and practical values, the accumulation of Property, the establishment of slavery of various kinds, the subjection of Women, the encouragement of luxury and self-indulgence, the growth of crowded cities and the endless conflicts and wars so resulting. We can see plainly that the incoming of the self-motive exercised a direct stimulus on the pursuit of these material objects and adaptations; and that the material adaptations in their turn did largely accentuate the self-motive; but to insist that the real explanation of the whole process is only to be found along one channel—the material OR the psychical—is clearly quite unnecessary. Those who understand that all matter is conscious in some degree, and that all consciousness has a material form of some kind, will be the first to admit this.

The same remarks apply to the Third Stage. We can see that in modern times the huge and unlimited powers of production by machinery, united with a growing tendency towards intelligent Birth-control, are preparing the way for an age of Communism and communal Plenty which will inevitably be associated (partly as cause and partly as effect) with a new general phase of consciousness, involving the mitigation of the struggle for existence, the growth of intuitional and psychical perception, the spread of amity and solidarity, the disappearance of War, and the realization (in degree) of the Cosmic life.

Perhaps the greatest difficulty or stumbling-block to the general acceptance of the belief in a third (or ‘Golden- Age’) phase of human evolution is the obstinate and obdurate pre-judgment that the passing of Humanity out of the Second stage can only mean the entire ABANDONMENT OF SELF-CONSCIOUSNESS; and this people

say—and quite rightly—is both impossible and undesirable. Throughout the preceding chapters I have striven, wherever feasible, to counter this misunderstanding—but I have little hope of success. The DETERMINATION of the world to misunderstand or misinterpret anything a little new or unfamiliar is a thing which perhaps only an author can duly appreciate. But while it is clear that self-consciousness originally came into being through a process of alienation and exile and fear which marked it with the Cain-like brand of loneliness and apartness, it is equally clear that to think of that apartness as an absolute and permanent separation is an illusion, since no being can really continue to live divorced from the source of its life. For a period in evolution the SELF took on this illusive form in consciousness, as of an ignis fatuus—the form of a being sundered from all other beings, atomic, lonely, without refuge, surrounded by dangers and struggling, for itself alone and for its own salvation in the midst of a hostile environment. Perhaps some such terrible imagination was necessary at first, as it were to start Humanity on its new path. But it had its compensation, for the sufferings and tortures, mental and bodily, the privations, persecutions, accusations, hatreds, the wars and conflicts—so endured by millions of individuals and whole races—have at length stamped upon the human mind a sense of individual responsibility which otherwise perhaps would never have emerged, and whose mark can now be effaced; ultimately, too, these things have searched our inner nature to its very depths and exposed its bed-rock foundation. They have convinced us that this idea of ultimate separation is an illusion, and that in truth we are all indefeasible and indestructible parts of one great Unity in which “we live and move and have our being.” That being so, it is clear that there remains in the end a self-consciousness which need by no means be abandoned, which indeed only comes to its true fruition and understanding when it recognizes its affiliation with the Whole, and glories in an individuality which is an expression both of itself AND of the whole. The human child at its mother’s knee probably comes first to know it HAS a ‘self’ on some fateful day when having wandered afar it goes lost among alien houses and streets or in the trackless fields. That appalling experience—the sense of danger, of fear, of loneliness—is never forgotten; it stamps some new sense of Being upon the childish mind, but that sense, instead of being destroyed, becomes all the prouder and more radiant in the hour of return to the mother’s arms. The return, the salvation, for which humanity looks, is the return of the little individual self to harmony and union with the great Self of the universe, but by no means its extinction or abandonment—rather the finding of its own true nature as never before.

There is another thing which may be said here: namely, that the disentanglement, as above, of three main stages of psychological evolution as great formative influences in the history of mankind, does not by any means preclude the establishment of lesser stages within the boundaries of these. In all probability subdivisions of all the three will come in time to be recognized and allowed for. To take the Second stage only, it MAY appear that Self-consciousness in its first development is characterized by an accentuation of Timidity; in its second development by a more deliberate pursuit of sensual Pleasure (lust, food, drink, &c.); in its third by the pursuit of mental gratifications (vanities, ambitions, enslavement of others); in its fourth by the pursuit of Property, as a means of attaining these objects; in its fifth by the access of enmities, jealousies, wars

and so forth, consequent on all these things; and so on. I have no intention at present of following out this line of thought, but only wish to suggest its feasibility and the degree to which it may throw light on the social evolutions of the Past.

As a kind of rude general philosophy we may say that there are only two main factors in life, namely, Love and Ignorance. And of these we may also say that the two are not in the same plane: one is positive and substantial, the other is negative and merely illusory. It may be thought at first that Fear and Hatred and Cruelty, and the like, are very positive things, but in the end we see that they are due merely to ABSENCE of perception, to dulness of understanding. Or we may put the statement in a rather less crude form, and say that there are only two factors in life: (1) the sense of Unity with others (and with Nature)—which covers Love, Faith, Courage, Truth, and so forth, and (2) Non-perception of the same—which covers Enmity, Fear, Hatred, Self-pity, Cruelty, Jealousy, Meanness and an endless similar list. The present world which we see around us, with its idiotic wars, its senseless jealousies of nations and classes, its fears and greeds and vanities and its futile endeavors—as of people struggling in a swamp—to find one's own salvation by treading others underfoot, is a negative phenomenon. Ignorance, non-perception, are at the root of it. But it is the blessed virtue of Ignorance and of non-perception that they inevitably-if only slowly and painfully—DESTROY THEMSELVES. All experience serves to dissipate them. The world, as it is, carries' the doom of its own transformation in its bosom; and in proportion as that which is negative disappears the positive element must establish itself more and more.

So we come back to that with which we began, to Fear bred by Ignorance. From that source has sprung the long catalogue of follies, cruelties and sufferings which mark the records of the human race since the dawn of history; and to the overcoming of this Fear we perforce must look for our future deliverance, and for the discovery, even in the midst of this world, of our true Home. The time is coming when the positive constructive element must dominate. It is inevitable that Man must ever build a state of society around him after the pattern and image of his own interior state. The whole futile and idiotic structure of commerce and industry in which we are now imprisoned springs from that falsehood of individualistic self-seeking which marks the second stage of human evolution. That stage is already tottering to its fall, destroyed by the very flood of egotistic passions and interests, of vanities, greeds, and cruelties, all warring with each other, which are the sure outcome and culmination of its operation. With the restoration of the sentiment of the Common Life, and the gradual growth of a mental attitude corresponding, there will emerge from the flood something like a solid earth—something on which it will be possible to build with good hope for the future. Schemes of reconstruction are well enough in their way, but if there is no ground of REAL HUMAN SOLIDARITY beneath, of what avail are they?

An industrial system which is no real industrial order, but only (on the part of the employers) a devil's device for securing private profit under the guise of public utility, and (on the part of the employed) a dismal and poor-spirited renunciation—for the sake of a bare living—of all real interest in life and work: such a 'system' must infallibly

pass away. It cannot in the nature of things be permanent. The first condition of social happiness and prosperity must be the sense of the Common Life. This sense, which instinctively underlay the whole Tribal order of the far past— which first came to consciousness in the worship of a thousand pagan divinities, and in the rituals of countless sacrifices, initiations, redemptions, love-feasts and communions, which inspired the dreams of the Golden Age, and flashed out for a time in the Communism of the early Christians and in their adorations of the risen Savior—must in the end be the creative condition of a new order: it must provide the material of which the Golden City waits to be built. The long travail of the World-religion will not have been in vain, which assures this consummation. What the signs and conditions of any general advance into this new order of life and consciousness will be, we know not. It may be that as to individuals the revelation of a new vision often comes quite suddenly, and GENERALLY perhaps after a period of great suffering, so to society at large a similar revelation will arrive—like “the lightning which cometh out of the East and shineth even unto the West”—with unexpected swiftness. On the other hand it would perhaps be wise not to count too much on any such sudden transformation. When we look abroad (and at home) in this year of grace and hoped-for peace, 1919, and see the spirits of rancour and revenge, the fears, the selfish blindness and the ignorance, which still hold in their paralyzing grasp huge classes and coteries in every country in the world, we see that the second stage of human development is by no means yet at its full term, and that, as in some vast chrysalis, for the liberation of the creature within still more and more terrible struggles MAY be necessary. We can only pray that such may not be the case. Anyhow, if we have followed the argument of this book we can hardly doubt that the destruction (which is going on everywhere) of the outer form of the present society marks the first stage of man’s final liberation; and that, sooner or later, and in its own good time, that further ‘divine event’ will surely be realized.

Nor need we fear that Humanity, when it has once entered into the great Deliverance, will be again overpowered by evil. From Knowledge back to Ignorance there is no complete return. The nations that have come to enlightenment need entertain no dread of those others (however hostile they appear) who are still plunging darkly in the troubled waters of self-greed. The dastardly Fears which inspire all brutishness and cruelty of warfare—whether of White against White or it may be of White against Yellow or Black—may be dismissed for good and all by that blest race which once shall have gained the shore—since from the very nature of the case those who are on dry land can fear nothing and need fear nothing from the unfortunates who are yet tossing in the welter and turmoil of the waves.

Dr. Frazer, in the conclusion of his great work *The Golden Bough*, bids farewell to his readers with the following words: “The laws of Nature are merely hypotheses devised to explain that ever-shifting phantasmagoria of thought which we dignify with the high-sounding names of the World and the Universe. In the last analysis magic, religion and science are nothing but theories [of thought]; and as Science has supplanted its predecessors so it may hereafter itself be superseded by some more perfect hypothesis, perhaps by some perfectly different way of looking at phenomena—of registering the

shadows on the screen—of which we in this generation can form no idea.” I imagine Dr. Frazer is right in thinking that “a way of looking at phenomena” different from the way of Science, may some day prevail. But I think this change will come, not so much by the growth of Science itself or the extension of its ‘hypotheses,’ as by a growth and expansion of the human HEART and a change in its psychology and powers of perception. Perhaps some of the preceding chapters will help to show how much the outlook of humanity on the world has been guided through the centuries by the slow evolution of its inner consciousness. Gradually, out of an infinite mass of folly and delusion, the human soul has in this way disentangled itself, and will in the future disentangle itself, to emerge at length in the light of true FREEDOM. All the taboos, the insane terrors, the fatuous forbiddals of this and that (with their consequent heart-searchings and distress) may perhaps have been in their way necessary, in order to rivet and define the meaning and the understanding of that word. To-day these taboos and terrors still linger, many of them, in the form of conventions of morality, uneasy strivings of conscience, doubts and desperations of religion; but ultimately Man will emerge from all these things, FREE—familiar, that is, with them all, making use of all, allowing generously for the values of all, but hampered and bound by NONE. He will realize the inner meaning of the creeds and rituals of the ancient religions, and will hail with joy the fulfilment of their far prophecy down the ages—finding after all the long-expected Saviour of the world within his own breast, and Paradise in the disclosure there of the everlasting peace of the soul.

APPENDIX

THE TEACHING OF THE UPANISHADS BEING THE SUBSTANCE OF TWO LECTURES TO POPULAR AUDIENCES

I. REST

II. THE NATURE OF THE SELF

I. REST

To some, in the present whirlpool of life and affairs it may seem almost an absurdity to talk about Rest. For long enough now rest has seemed a thing far off and unattainable. With the posts knocking at our doors ten or twelve times a day, with telegrams arriving every hour, and the telephone bell constantly ringing; with motors rushing wildly about the streets, and aeroplanes whizzing overhead, with work speeded up in every direction, and the drive in the workshops becoming more intolerable every day; with the pace of the walkers and the pace of the talkers from hour to hour insanely increasing—what room, it may well be asked, is there for Rest? And now the issues of war, redoubling the urgency of all questions, are on us.

The problem is obviously a serious one. So urgent is it that I think one may safely say the amount of insanity due to the pressure of daily life is increasing; nursing-homes have sprung up for the special purpose of treating such cases; and doctors are starting special courses of tuition in the art—now becoming very important—of systematically doing nothing! And yet it is difficult to see the outcome of it all. The clock of what is called Progress is not easily turned backward. We should not very readily agree nowadays to the abolition of telegrams or to a regulation compelling express trains to stop at every station! We can't ALL go to Nursing Homes, or afford to enjoy a winter's rest-cure in Egypt. And, if not, is the speeding-up process to go on indefinitely, incapable of being checked, and destined ultimately to land civilization in the mad-house?

It is, I say, a serious and an urgent problem. And it is, I think, forcing a certain answer on us—which I will now endeavor to explain.

If we cannot turn back and reverse this fatal onrush of modern life (and it is evident that we cannot do so in any very brief time—though of course ultimately we might succeed) then I think there are clearly only two alternatives left—either to go forward to general dislocation and madness, or—to learn to rest even in the very midst of the hurry and the scurry.

To explain what I mean, let me use an illustration. The typhoons and cyclones of the China Seas are some of the most formidable storms that ships can encounter. Their paths in the past have been strewn with wrecks and disaster. But now with increased knowledge much of their danger has been averted. It is known that they are CIRCULAR in character, and that though the wind on their outskirts often reaches a speed of 100 miles an hour, in the centre of the storm there is a space of complete calm—not a calm of the SEA certainly, but a complete absence of wind. The skilled navigator, if he cannot escape the storm, steers right into the heart of it, and rests there. Even in the midst of the clatter he finds a place of quiet where he can trim his sails and adjust his future course. He knows too from his position in what direction at every point around him the wind is moving and where it will strike him when at last his ship emerges from the charmed circle.

Is it not possible, we may ask, that in the very midst of the cyclone of daily life we may find a similar resting-place? If we can, our case is by no means hopeless. If we cannot, then indeed there is danger.

Looking back in History we seem to see that in old times people took life much more leisurely than they do now. The elder generations gave more scope in their customs and their religions for contentment and peace of mind. We associate a certain quietism and passivity with the thought of the Eastern peoples. But as civilization traveled Westward external activity and the pace of life increased—less and less time was left for meditation and repose—till with the rise of Western Europe and America, the dominant note of life seems to have simply become one of feverish and ceaseless activity—of activity merely for the sake of activity, without any clear idea of its own purpose or object.

Such a prospect does not at first seem very hopeful; but on second thoughts we see that we are not forced to draw any very pessimistic conclusion from it. The direction of human evolution need not remain always the same. The movement, in fact, of civilization from East to West has now clearly completed itself. The globe has been circled, and we cannot go any FARTHER to the West without coming round to the East again. It is a commonplace to say that our psychology, our philosophy and our religious sense are already taking on an Eastern color; nor is it difficult to imagine that with the end of the present dispensation a new era may perfectly naturally arrive in which the St. Vitus' dance of money-making and ambition will cease to be the chief end of existence.

In the history of nations as in the history of individuals there are periods when the formative ideals of life (through some hidden influence) change; and the mode of life and evolution in consequence changes also. I remember when I was a boy wishing—like many other boys—to go to sea. I wanted to join the Navy. It was not, I am sure, that I was so very anxious to defend my country. No, there was a much simpler and more prosaic motive than that. The ships of those days with their complex rigging suggested a perfect paradise of CLIMBING, and I know that it was the thought of THAT which influenced me. To be able to climb indefinitely among those ropes and spars!

How delightful! Of course I knew perfectly well that I should not always have free access to the rigging; but then—some day, no doubt, I should be an Admiral, and who then could prevent me? I remember seeing myself in my mind's eye, with cocked hat on my head and spy-glass under my arm, roaming at my own sweet will up aloft, regardless of the remonstrances which might reach me from below! Such was my childish ideal. But a time came—needless to say—when I conceived a different idea of the object of life.

It is said that John Tyndall, whose lectures on Science were so much sought after in their time, being on one occasion in New York was accosted after his discourse by a very successful American business man, who urged him to devote his scientific knowledge and ability to commercial pursuits, promising that if he did so, he, Tyndall, would easily make "a big pile." Tyndall very calmly replied, "Well, I myself thought of that once, but I soon abandoned the idea, having come to the conclusion that I had NO TIME TO WASTE IN MAKING MONEY." The man of dollars nearly sank into the ground. Such a conception of life had never entered his head before. But to Tyndall no doubt it was obvious that if he chained himself to the commercial ideal all the joy and glory of his days would be gone.

We sometimes hear of the awful doom of some of the Russian convicts in the quarries and mines of Siberia, who are (or were) chained permanently to their wheelbarrows. It is difficult to imagine a more dreadful fate: the despair, the disgust, the deadly loathing of the accursed thing from which there is no escape day or night—which is the companion not only of the prisoner's work but of his hours of rest—with which he has to sleep, to feed, to take his recreation if he has any, and to fulfil all the offices of nature. Could anything be more crushing? And yet, and yet . . . is it not true that we, most of us, in our various ways are chained to our wheelbarrows—is it not too often true that to these beggarly things we have for the most part chained OURSELVES?

Let me be understood. Of course we all have (or ought to have) our work to do. We have our living to get, our families to support, our trade, our art, our profession to pursue. In that sense no doubt we are tied; but I take it that these things are like the wheelbarrow which a man uses while he is at work. It may irk him at times, but he sticks to it with a good heart, and with a certain joy because it is the instrument of a noble purpose. That is all right. But to be chained to it, not to be able to leave it when the work of the day is done—that is indeed an ignoble slavery. I would say, then, take care that even with these things, these necessary arts of life, you preserve your independence, that even if to some degree they may confine your body they do not enslave your mind.

For it is the freedom of the mind which counts. We are all no doubt caught in the toils of the earth-life. One man is largely dominated by sensual indulgence, another by ambition, another by the pursuit of money. Well, these things are all right in themselves. Without the pleasures of the senses we should be dull mokes indeed; without ambition much of the zest and enterprise of life would be gone; gold, in the present

order of affairs, is a very useful servant. These things are right enough—but to be CHAINED to them, to be unable to think of anything else—what a fate! The subject reminds one of a not uncommon spectacle. It is a glorious day; the sun is bright, small white clouds float in the transparent blue—a day when you linger perforce on the road to enjoy the scene. But suddenly here comes a man painfully running all hot and dusty and mopping his head, and with no eye, clearly, for anything around him. What is the matter? He is absorbed by one idea. He is running to catch a train! And one cannot help wondering what EXCEEDINGLY important business it must be for which all this glory and beauty is sacrificed, and passed by as if it did not exist.

Further we must remember that in our foolishness we very commonly chain ourselves, not only to things like sense- pleasures and ambitions which are on the edge, so to speak, of being vices; but also to other things which are accounted virtues, and which as far as I can see are just as bad, if we once become enslaved to them. I have known people who were so exceedingly 'spiritual' and 'good' that one really felt quite depressed in their company; I have known others whose sense of duty, dear things, was so strong that they seemed quite unable to REST, or even to allow their friends to rest; and I have wondered whether, after all, worrying about one's duty might not be as bad—as deteriorating to oneself, as distressing to one's friends—as sinning a good solid sin. No, in this respect virtues MAY be no better than vices; and to be chained to a wheelbarrow made of alabaster is no way preferable to being chained to one of wood. To sacrifice the immortal freedom of the mind in order to become a prey to self-regarding cares and anxieties, self-estimating virtues and vices, self-chaining duties and indulgences, is a mistake. And I warn you, it is quite useless. For the destiny of Freedom is ultimately upon every one, and if refusing it for a time you heap your life persistently upon one object—however blameless in itself that object may be—Beware! For one day—and when you least expect it—the gods will send a thunderbolt upon you. One day the thing for which you have toiled and spent laborious days and sleepless nights will lie broken before you—your reputation will be ruined, your ambition will be dashed, your savings of years will be lost—and for the moment you will be inclined to think that your life has been in vain. But presently you will wake up and find that something quite different has happened. You will find that the thunderbolt which you thought was your ruin has been your salvation—that it has broken the chain which bound you to your wheelbarrow, and that you are free!

I think you will now see what I mean by Rest. Rest is the loosing of the chains which bind us to the whirligig of the world, it is the passing into the centre of the Cyclone; it is the Stilling of Thought. For (with regard to this last) it is Thought, it is the Attachment of the Mind, which binds us to outer things. The outer things themselves are all right. It is only through our thoughts that they make slaves of us. Obtain power over your thoughts and you are free. You can then use the outer things or dismiss them at your pleasure.

There is nothing new of course in all this. It has been known for ages; and is part of the ancient philosophy of the world.

In the Katha Upanishad you will find these words (Max Muller's translation): "As rain-water that has fallen on a mountain ridge runs down on all sides, thus does he who sees a difference between qualities run after them on all sides." This is the figure of the man who does NOT rest. And it is a powerful likeness. The thunder shower descends on the mountain top; torrents of water pour down the crags in every direction. Imagine the state of mind of a man—however thirsty he may be—who endeavors to pursue and intercept all these streams!

But then the Upanishad goes on: "As pure water poured into pure water remains the same, thus, O Gautama, is the Self of a thinker who knows." What a perfect image of rest! Imagine a cistern before you with transparent glass sides and filled with pure water. And then imagine some one comes with a phial, also of pure water, and pours the contents gently into the cistern. What will happen? Almost nothing. The pure water will glide into the pure water—"remaining the same." There will be no dislocation, no discoloration (as might happen if MUDDY water were poured in); there will be only perfect harmony.

I imagine here that the meaning is something like this. The cistern is the great Reservoir of the Universe which contains the pure and perfect Spirit of all life. Each one of us, and every mortal creature, represents a drop from that reservoir—a drop indeed which is also pure and perfect (though the phial in which it is contained may not always be so). When we, each of us, descend into the world and meet the great Ocean of Life which dwells there behind all mortal forms, it is like the little phial being poured into the great reservoir. If the tiny canful which is our selves is pure and unsoiled, then when it meets the world it will blend with the Spirit which informs the world perfectly harmoniously, without distress or dislocation. It will pass through and be at one with it. How can one describe such a state of affairs? You will have the key to every person that you meet, because indeed you are conscious that the real essence of that person is the same as your own. You will have the solution of every event which happens. For every event is (and is felt to be) the touch of the great Spirit on yours. Can any description of Rest be more perfect than that? Pure water poured into pure water. . . . There is no need to hurry, for everything will come in its good time. There is no need to leave your place, for all you desire is close at hand.

Here is another verse (from the Vagasaneyi-Samhita Upanishad) embodying the same idea: "And he who beholds all beings in the Self, and the Self in all beings, he never turns away from It. When, to a man who understands, the Self has become all things, what sorrow, what trouble, can there be to him—having once beheld that Unity?"—What trouble, what sorrow, indeed, when the universe has become transparent with the presences of all we love, held firm in the One enfolding Presence?

But it will be said: "Our minds are NOT pure and transparent. More often they are muddy and soiled—soiled, if not in their real essence, yet by reason of the mortal phial in which they are contained." And that alas! is true. If you pour a phial of muddy water into that reservoir which we described—what will you see? You will see a queer and ugly cloud formed. And to how many of us, in our dealings with the world, does life take on just such a form—of a queer and ugly cloud?

Now not so very long after those Upanishads were written there lived in China that great Teacher, Lao-tze; and he too had considered these things. And he wrote—in the Tao-Teh-King—"Who is there who can make muddy water clear?" The question sounds like a conundrum. For a moment one hesitates to answer it. Lao-tze, however, has an answer ready. He says: "But if you LEAVE IT ALONE it will become clear of itself." That muddy water of the mind, muddied by all the foolish little thoughts which like a sediment infest it—but if you leave it alone it will become clear of itself. Sometimes walking along the common road after a shower you have seen pools of water lying here and there, dirty and unsightly with the mud stirred up by the hoofs of men and animals. And then returning some hours afterwards along the same road—in the evening and after the cessation of traffic—you have looked again, and lo! each pool has cleared itself to a perfect calm, and has become a lovely mirror reflecting the trees and the clouds and the sunset and the stars.

So this mirror of the mind. Leave it alone. Let the ugly sediment of tiresome thoughts and anxieties, and of fussing over one's self-importances and duties, settle down—and presently you will look on it, and see something there which you never knew or imagined before—something more beautiful than you ever yet beheld—a reflection of the real and eternal world such is only given to the mind that rests.

Do not recklessly spill the waters of your mind in this direction and in that, lest you become like a spring lost and dissipated in the desert.

But draw them together into a little compass, and hold them still, so still;

And let them become clear, so clear—so limpid, so mirror-like;

At last the mountains and the sky shall glass themselves in peaceful beauty,

And the antelope shall descend to drink, and the lion to quench his thirst,

And Love himself shall come and bend over, and catch his own likeness in you.

Yes, there is this priceless thing within us, but hoofing along the roads in the mud we fail to find it; there is this region of calm, but the cyclone of the world raging around guards us from entering it. Perhaps it is best so—best that the access to it should not be made too easy. One day, some time ago, in the course of conversation with Rabindranath Tagore in London, I asked him what impressed him most in visiting the

great city. He said, "The restless incessant movement of everybody." I said, "Yes, they seem as if they were all rushing about looking for something." He replied, "It is because each person does not know of the great treasure he has within himself."

How then are we to reach this treasure and make it our own? How are we to attain to this Stilling of the Mind, which is the secret of all power and possession? The thing is difficult, no doubt; yet as I tried to show at the outset of this discourse, we Moderns MUST reach it; we have got to attain to it—for the penalty of failure is and must be widespread Madness.

The power to still the mind—to be ABLE, mark you, when you want, to enter into the region of Rest, and to dismiss or command your Thoughts—is a condition of Health; it is a condition of all Power and Energy. For all health, whether of mind or body, resides in one's relation to the central Life within. If one cannot get into touch with THAT, then the life-forces cannot flow down into the organism. Most, perhaps all, disease arises from the disturbance of this connection. All mere hurry, all mere running after external things (as of the man after the water-streams on the mountain-top), inevitably breaks it. Let a pond be allowed calmly under the influence of frost to crystallize, and most beautiful flowers and spears of ice will be formed, but keep stirring the water all the time with a stick or a pole and nothing will result but an ugly brash of half-frozen stuff. The condition of the exercise of power and energy is that it should proceed from a center of Rest within one. So convinced am I of this, that whenever I find myself hurrying over my work, I pause and say, "Now you are not producing anything good!" and I generally find that that is true. It is curious, but I think very noticeable, that the places where people hurry most—as for instance the City of London or Wall Street, New York—are just the places where the work being done is of LEAST importance (being mostly money-gambling); whereas if you go and look at a ploughman ploughing—doing perhaps the most important of human work—you find all his movements most deliberate and leisurely, as if indeed he had infinite time at command; the truth being that in dealing (like a ploughman) with the earth and the horses and the weather and the things of Nature generally you can no more hurry than Nature herself hurries.

Following this line of thought it might seem that one would arrive at a hopeless paradox. If it be true that the less one hurries the better the work resulting, then it might seem that by sitting still and merely twirling one's thumbs one would arrive at the very greatest activity and efficiency! And indeed (if understood aright) there is a truth even in this, which—like the other points I have mentioned—has been known and taught long ages ago. Says that humorous old sage, Lao-tze, whom I have already quoted: "By non-action there is nothing that cannot be done." At first this sounds like mere foolery or worse; but afterwards thinking on it one sees there is a meaning hidden. There is a secret by which Nature and the powers of the universal life will do all for you. The Bhagavat Gita also says, "He who discovers inaction in action and action in inaction is wise among mortals."

It is worth while dwelling for a moment on these texts. We are all—as I said earlier on—involved in work belonging to our place and station; we are tied to some degree in the bonds of action. But that fact need not imprison our inner minds. While acting even with keenness and energy along the external and necessary path before us, it is perfectly possible to hold the mind free and untied—so that the RESULT of our action (which of course is not ours to command) shall remain indifferent and incapable of unduly affecting us. Similarly, when it is our part to remain externally INACTIVE, we may discover that underneath this apparent inaction we may be taking part in the currents of a deeper life which are moving on to a definite end, to an end or object which in a sense is ours and in a sense is NOT ours.

The lighthouse beam flies over land and sea with incredible velocity, and you think the light itself must be in swiftest movement; but when you climb up thither you find the lamp absolutely stationary. It is only the reflection that is moving. The rider on horseback may gallop to and fro wherever he will, but it is hard to say that HE is acting. The horse guided by the slightest indication of the man's will performs the action that is needed. If we can get into right touch with the immense, the incalculable powers of Nature, is there anything which we may not be able to do?" If a man worship the Self only as his true state," says the Brihad-aranyaka Upanishad, "his work cannot fail, for whatever he desires, that he obtains from the Self." What a wonderful saying, and how infallibly true! For obviously if you succeed in identifying your true being with the great Self of the universe, then whatever you desire the great Self will also desire, and therefore every power of Nature will be at your service and will conspire to fulfil your need.

There are marvelous things here "well wrapped up"—difficult to describe, yet not impossible to experience. And they all depend upon that power of stilling Thought, that ability to pass unharmed and undismayed through the grinning legions of the lower mind into the very heart of Paradise.

The question inevitably arises, How can this power be obtained? And there is only one answer—the same answer which has to be given for the attainment of ANY power or faculty. There is no royal road. The only way is (however imperfectly) to DO the thing in question, to practice it. If you would learn to play cricket, the only way is to play cricket; if you would be able to speak a language, the only way is to speak it. If you would learn to swim, the only way is to practice swimming. Or would you wish to be like the man who when his companions were bathing and bidding him come and join them, said: "Yes, I am longing to join you, but I am not going to be such a fool as to go into the water TILL I KNOW HOW TO SWIM!"

There is nothing but practice. If you want to obtain that priceless power of commanding Thought—of using it or dismissing it (for the two things go together) at will—there is no way but practice. And the practice consists in two exercises: (a) that of concentration—in holding the thought steadily for a time on one subject, or point of a subject; and (b) that of effacement—in effacing any given thought from the mind, and determining NOT to entertain it for such and such a time. Both these exercises are difficult. Failure in

practicing them is certain —and may even extend over years. But the power equally certainly grows WITH practice. And ultimately there may come a time when the learner is not only able to efface from his mind any given thought (however importunate), but may even succeed in effacing, during short periods, ALL thought of any kind. When this stage is reached, the veil of illusion which surrounds all mortal things is pierced, and the entrance to the Paradise of Rest (and of universal power and knowledge) is found.

Of indirect or auxiliary methods of reaching this great conclusion, there are more than one. I think of life in the open air, if not absolutely necessary, at least most important. The gods—though sometimes out of compassion they visit the interiors of houses—are not fond of such places and the evil effluvium they find there, and avoid them as much as they can. It is not merely a question of breathing oxygen instead of carbonic acid. There is a presence and an influence in Nature and the Open which expands the mind and causes brigand cares and worries to drop off—whereas in confined places foolish and futile thoughts of all kinds swarm like microbes and cloud and conceal the soul. *Experto Crede*. It is only necessary to try this experiment in order to prove its truth.

Another thing which corresponds in some degree to living physically in the open air, is the living mentally and emotionally in the atmosphere of love. A large charity of mind, which refuses absolutely to shut itself in little secluded places of prejudice, bigotry and contempt for others, and which attains to a great and universal sympathy, helps, most obviously, to open the way to that region of calm and freedom of which we have spoken, while conversely all petty enmity, meanness and spite, conspire to imprison the soul and make its deliverance more difficult.

It is not necessary to labor these points. As we said, the way to attain is to sincerely TRY to attain, to consistently PRACTICE attainment. Whoever does this will find that the way will open out by degrees, as of one emerging from a vast and gloomy forest, till out of darkness the path becomes clear. For whomsoever really TRIES there is no failure; for every effort in that region is success, and every onward push, however small, and however little result it may show, is really a move forward, and one step nearer the light.

II. THE NATURE OF THE SELF

The true nature of the Self is a matter by no means easy to compass. We have all probably at some time or other attempted to fathom the deeps of personality, and been baffled. Some people say they can quite distinctly remember a moment in early childhood, about the age of THREE (though the exact period is of course only approximate) when self-consciousness—the awareness of being a little separate Self—first dawned in the mind. It was generally at some moment of childish tension—alone perhaps in a garden, or lost from the mother's protecting hand—that this happened; and it was the beginning of a whole range of new experience. Before some such period there is in childhood strictly speaking no distinct self-consciousness. As Tennyson says (In Memoriam xlv):

The baby new to earth and sky,
What time his tender palm is prest
Against the circle of the breast,
Hath never thought that "This is I."

It has consciousness truly, but no distinctive self-consciousness. It is this absence or deficiency which explains many things which at first sight seem obscure in the psychology of children and of animals. The baby (it has often been noticed) experiences little or no sense of FEAR. It does not know enough to be afraid; it has never formed any image of itself, as of a thing which might be injured. It may shrink from actual pain or discomfort, but it does not LOOK FORWARD—which is of the essence of fear—to pain in the future. Fear and self-consciousness are closely interlinked. Similarly with animals, we often wonder how a horse or a cow can endure to stand out in a field all night, exposed to cold and rain, in the lethargic patient way that they exhibit. It is not that they do not FEEL the discomfort, but it is that they do not envisage THEMSELVES as enduring this pain and suffering for all those coming hours; and as we know with ourselves that nine-tenths of our miseries really consist in looking forward to future miseries, so we understand that the absence or at any rate slight prevalence of self-consciousness in animals enables them to endure forms of distress which would drive us mad.

In time then the babe arrives at self-consciousness; and, as one might expect, the growing boy or girl often becomes intensely aware of Self. His or her self-consciousness is crude, no doubt, but it has very little misgiving. If the question of the nature of the Self is propounded to the boy as a problem he has no difficulty in solving it. He says "I know well enough who I am: I am the boy with red hair what gave Jimmy Brown such a jolly good licking last Monday week." He knows well enough—or thinks he knows—who he is. And at a later age, though his definition may change and he may describe himself chiefly as a good cricketer or successful in certain examinations, his method is practically the same. He fixes his mind on a certain bundle of qualities and capacities which he is supposed to possess, and calls that bundle Himself. And in a more elaborate way we most of us, I imagine, do the same.

Presently, however, with more careful thought, we begin to see difficulties in this view. I see that directly I think of myself as a certain bundle of qualities—and for that matter it is of no account whether the qualities are good or bad, or in what sort of charming confusion they are mixed—I see at once that I am merely looking at a bundle of qualities: and that the real “I,” the Self, is not that bundle, but is the being INSPECTING the same—something beyond and behind, as it were. So I now concentrate my thoughts upon that inner Something, in order to find out what it really is. I imagine perhaps an inner being, of ‘astral’ or ethereal nature, and possessing a new range of much finer and more subtle qualities than the body—a being inhabiting the body and perceiving through its senses, but quite capable of surviving the tenement in which it dwells and I think of that as the Self. But no sooner have I taken this step than I perceive that I am committing the same mistake as before. I am only contemplating a new image or picture, and “I” still remain beyond and behind that which I contemplate. No sooner do I turn my attention on the subjective being than it becomes OBJECTIVE, and the real subject retires into the background. And so on indefinitely. I am baffled; and unable to say positively what the Self is.

Meanwhile there are people who look upon the foregoing speculations about an interior Self as merely unpractical. Being perhaps of a more materialistic type of mind they fix their attention on the body. Frankly they try to define the Self by the body and all that is connected therewith—that is by the mental as well as corporeal qualities which exhibit themselves in that connection; and they say, “At any rate the Self—whatever it may be—is in some way limited by the body; each person studies the interest of his body and of the feelings, emotions and mentality directly associated with it, and you cannot get beyond that; it isn’t in human nature to do so. The Self is limited by this corporeal phenomenon and doubtless it perishes when the body perishes.” But here again the conclusion, though specious at first, soon appears to be quite inadequate. For though it is possibly true that a man, if left alone in a Robinson Crusoe life on a desert island, might ultimately subside into a mere gratification of his corporeal needs and of those mental needs which were directly concerned with the body, yet we know that such a case would by no means be representative. On the contrary we know that vast numbers of people spend their lives in considering other people, and often so far as to sacrifice their own bodily and mental comfort and well-being. The mother spends her life thinking almost day and night about her babe and the other children—spending all her thoughts and efforts on them. You may call her selfish if you will, but her selfishness clearly extends beyond her personal body and mind, and extends to the personalities of her children around her; her “body”—if you insist on your definition—must be held to include the bodies of all her children. And again, the husband who is toiling for the support of the family, he is thinking and working and toiling and suffering for a ‘self’ which includes his wife and children. Do you mean that the whole family is his “body”? Or a man belongs to some society, to a church or to a social league of some kind, and his activities are largely ruled by the interests of this larger group. Or he sacrifices his life—as many have been doing of late—with extraordinary bravery and heroism for the sake of the nation to which he belongs. Must we say then that the whole nation is real-

ly a part of the man's body? Or again, he gives his life and goes to the stake for his religion. Whether his religion is right or wrong does not matter, the point is that there is that in him which can carry him far beyond his local self and the ordinary instincts of his physical organism, to dedicate his life and powers to a something of far wider circumference and scope.

Thus in the FIRST of these two examples of a search for the nature of the Self we are led INWARDS from point to point, into interior and ever subtler regions of our being, and still in the end are baffled; while in the SECOND we are carried outwards into an ever wider and wider circumference in our quest of the Ego, and still feel that we have failed to reach its ultimate nature. We are driven in fact by these two arguments to the conclusion that that which we are seeking is indeed something very vast—something far extending around, yet also buried deep in the hidden recesses of our minds. How far, how deep, we do not know. We can only say that as far as the indications point the true self is profounder and more far-reaching than anything we have yet fathomed.

In the ordinary commonplace life we shrink to ordinary commonplace selves, but it is one of the blessings of great experiences, even though they are tragic or painful, that they throw us out into that enormously greater self to which we belong. Sometimes, in moments of inspiration, of intense enthusiasm, of revelation, such as a man feels in the midst of a battle, in moments of love and dedication to another person, and in moments of religious ecstasy, an immense world is opened up to the astonished gaze of the inner man, who sees disclosed a self stretched far beyond anything he had ever imagined. We have all had experiences more or less of that kind. I have known quite a few people, and most of you have known some, who at some time, even if only once in their lives, have experienced such an extraordinary lifting of the veil, an opening out of the back of their minds as it were, and have had such a vision of the world, that they have never afterwards forgotten it. They have seen into the heart of creation, and have perceived their union with the rest of mankind. They have had glimpses of a strange immortality belonging to them, a glimpse of their belonging to a far greater being than they have ever imagined. Just once—and a man has never forgotten it, and even if it has not recurred it has colored all the rest of his life.

Now, this subject has been thought about—since the beginning of the world, I was going to say—but it has been thought about since the beginnings of history. Some three thousand years ago certain groups of—I hardly like to call them philosophers—but, let us say, people who were meditating and thinking upon these problems, were in the habit of locating themselves in the forests of Northern India; and schools arose there. In the case of each school some teacher went into the woods and collected groups of disciples around him, who lived there in his company and listened to his words. Such schools were formed in very considerable numbers, and the doctrines of these teachers were gathered together, generally by their disciples, in notes, which notes were brought together into little pamphlets or tracts, forming the books which are called the 'Upanishads' of the Indian sages. They contain some extraordinary words of wisdom, some of which I want to bring before you. The conclusions arrived at were not

so much what we should call philosophy in the modern sense. They were not so much the result of the analysis of the mind and the following out of concatenations of strict argument; but they were flashes of intuition and experience, and all through the 'Upanishads' you find these extraordinary flashes embedded in the midst of a great deal of what we should call a rather rubbishy kind of argument, and a good deal of merely conventional Brahmanical talk of those days. But the people who wrote and spoke thus had an intuition into the heart of things which I make bold to say very few people in modern life have. These 'Upanishads,' however various their subject, practically agree on one point—in the definition of the "self." They agree in saying: that the self of each man is continuous with and in a sense identical with the Self of the universe. Now that seems an extraordinary conclusion, and one which almost staggers the modern mind to conceive of. But that is the conclusion, that is the thread which runs all through the 'Upanishads'—the identity of the self of each individual with the self of every other individual throughout mankind, and even with the selves of the animals and other creatures.

Those who have read the Khandogya Upanishad remember how in that treatise the father instructs his son Svetaketu on this very subject—pointing him out in succession the objects of Nature and on each occasion exhorting him to realize his identity with the very essence of the object—"Tat twam asi, THAT thou art." He calls Svetaketu's attention to a tree. What is the ESSENCE of the tree? When they have rejected the external characteristics—the leaves, the branches, etc.—and agreed that the SAP is the essence, then the father says, "TAT TWAM ASI—THAT thou art." He gives his son a crystal of salt, and asks him what is the essence of that. The son is puzzled. Clearly neither the form nor the transparent quality are essential. The father says, "Put the crystal in water." Then when it is melted he says, "Where is the crystal?" The son replies, "I do not know." "Dip your finger in the bowl," says the father, "and taste." Then Svetaketu dips here and there, and everywhere there is a salt flavor. They agree that THAT is the essence of salt; and the father says again, "TAT twam asi." I am of course neither defending nor criticizing the scientific attitude here adopted. I am only pointing out that this psychological identification of the observer with the object observed runs through the Upanishads, and is I think worthy of the deepest consideration.

In the 'Bhagavat Gita,' which is a later book, the author speaks of "him whose soul is purified, whose self is the Self of all creatures." A phrase like that challenges opposition. It is so bold, so sweeping, and so immense, that we hesitate to give our adhesion to what it implies. But what does it mean—"whose soul is purified"? I believe that it means this, that with most of us our souls are anything but clean or purified, they are by no means transparent, so that all the time we are continually deceiving ourselves and making clouds between us and others. We are all the time grasping things from other people, and, if not in words, are mentally boasting ourselves against others, trying to think of our own superiority to the rest of the people around us. Sometimes we try to run our neighbors down a little, just to show that they are not quite equal to our level. We try to snatch from others some things which belong to them, or take credit to ourselves for things to which we are not fairly entitled. But all the time we are acting so

it is perfectly obvious that we are weaving veils between ourselves and others. You cannot have dealings with another person in a purely truthful way, and be continually trying to cheat that person out of money, or out of his good name and reputation. If you are doing that, however much in the background you may be doing it, you are not looking the person fairly in the face—there is a cloud between you all the time. So long as your soul is not purified from all these really absurd and ridiculous little desires and superiorities and self-satisfactions, which make up so much of our lives, just so long as that happens you do not and you cannot see the truth. But when it happens to a person, as it does happen in times of great and deep and bitter experience; when it happens that all these trumpery little objects of life are swept away; then occasionally, with astonishment, the soul sees that. It is also the soul of the others around. Even if it does not become aware of an absolute identity, it perceives that there is a deep relationship and communion between itself and others, and it comes to understand how it may really be true that to him whose soul is purified the self is literally the Self of all creatures.

Ordinary men and those who go on more intellectual and less intuitional lines will say that these ideas are really contrary to human nature and to nature generally. Yet I think that those people who say this in the name of Science are extremely unscientific, because a very superficial glance at nature reveals that the very same thing is taking place throughout nature. Consider the madrepores, corallines, or sponges. You find, for instance, that constantly the little self of the coralline or sponge is functioning at the end of a stem and casting forth its tentacles into the water to gain food and to breathe the air out of the water. That little animalcule there, which is living in that way, imagines no doubt that it is working all for itself, and yet it is united down the stem at whose extremity it stands, with the life of the whole madrepores or sponge to which it belongs. There is the common life of the whole and the individual life of each, and while the little creature at the end of the stem is thinking (if it is conscious at all) that its whole energies are absorbed in its own maintenance, it really is feeding the common life through the stem to which it belongs, and in its turn it is being fed by that common life.

You have only to look at an ordinary tree to see the same thing going on. Each little leaf on a tree may very naturally have sufficient consciousness to believe that it is an entirely separate being maintaining itself in the sunlight and the air, withering away and dying when the winter comes on—and there is an end of it. It probably does not realize that all the time it is being supported by the sap which flows from the trunk of the tree, and that in its turn it is feeding the tree, too—that its self is the self of the whole tree. If the leaf could really understand itself, it would see that its self was deeply, intimately connected, practically one with the life of the whole tree. Therefore, I say that this Indian view is not unscientific. On the contrary, I am sure that it is thoroughly scientific.

Let us take another passage, out of the 'Svetasvatara Upanishad,' which, speaking of the self says: "He is the one God, hidden in all creatures, all pervading, the self within all, watching over all works, shadowing all creatures, the witness, the perceiver, the only one free from qualities."

And now we can return to the point where we left the argument at the beginning of this discourse. We said, you remember, that the Self is certainly no mere bundle of qualities—that the very nature of the mind forbids us thinking that. For however fine and subtle any quality or group of qualities may be, we are irresistibly compelled by the nature of the mind itself to look for the Self, not in any quality or qualities, but in the being that PERCEIVES those qualities. The passage I have just quoted says that being is “The one God, hidden in all creatures, all pervading, the self within all . . . the witness, the perceiver, the only one free from qualities.” And the more you think about it the clearer I think you will see that this passage is correct—that there can be only ONE witness, ONE perceiver, and that is the one God hidden in all creatures, “Sarva Sakshi,” the Universal Witness.

Have you ever had that curious feeling, not uncommon, especially in moments of vivid experience and emotion, that there was at the back of your mind a witness, watching everything that was going on, yet too deep for your ordinary thought to grasp? Has it not occurred to you—in a moment say of great danger when the mind was agitated to the last degree by fears and anxieties—suddenly to become perfectly calm and collected, to realize that NOTHING can harm you, that you are identified with some great and universal being lifted far over this mortal world and unaffected by its storms? Is it not obvious that the real Self MUST be something of this nature, a being perceiving all, but itself remaining unperceived? For indeed if it were perceived it would fall under the head of some definable quality, and so becoming the object of thought would cease to be the subject, would cease to be the Self.

The witness is and must be “free from qualities.” For since it is capable of perceiving ALL qualities it must obviously not be itself imprisoned or tied in any quality—it must either be entirely without quality, or if it have the potentiality of quality in it, it must have the potentiality of EVERY quality; but in either case it cannot be in bondage to any quality, and in either case it would appear that there can be only ONE such ultimate Witness in the universe. For if there were two or more such Witnesses, then we should be compelled to suppose them distinguished from one another by something, and that something could only be a difference of qualities, which would be contrary to our conclusion that such a Witness cannot be in bondage to any quality.

There is then I take it—as the text in question says—only one Witness, one Self, throughout the universe. It is hidden in all living things, men and animals and plants; it pervades all creation. In every thing that has consciousness it is the Self; it watches over all operations, it overshadows all creatures, it moves in the depths of our hearts, the perceiver, the only being that is cognizant of all and yet free from all.

Once you really appropriate this truth, and assimilate it in the depths of your mind, a vast change (you can easily imagine) will take place within you. The whole world will be transformed, and every thought and act of which you are capable will take on a different color and complexion. Indeed the revolution will be so vast that it would be quite

impossible for me within the limits of this discourse to describe it. I will, however, occupy the rest of my time in dealing with some points and conclusions, and some mental changes which will flow perfectly naturally from this axiomatic change taking place at the very root of life.

“Free from qualities.” We generally pride ourselves a little on our qualities. Some of us think a great deal of our good qualities, and some of us are rather ashamed of our bad ones! I would say: “Do not trouble very much about all that. What good qualities you have—well you may be quite sure they do not really amount to much; and what bad qualities, you may be sure they are not very important! Do not make too much fuss about either. Do you see? The thing is that you, you yourself, are not ANY of your qualities—you are the being that perceives them. The thing to see to is that they should not confuse you, bamboozle you, and hide you from the knowledge of yourself—that they should not be erected into a screen, to hide you from others, or the others from you. If you cease from running after qualities, then after a little time your soul will become purified, and you will KNOW that your self is the Self of all creatures; and when you can feel that you will know that the other things do not much matter.

Sometimes people are so awfully good that their very goodness hides them from other people. They really cannot be on a level with others, and they feel that the others are far below them. Consequently their ‘selves’ are blinded or hidden by their ‘goodness.’ It is a sad end to come to! And sometimes it happens that very ‘bad’ people—just because they are so bad—do not erect any screens or veils between themselves and others. Indeed they are only too glad if others will recognize them, or if they may be allowed to recognize others. And so, after all, they come nearer the truth than the very good people.

“The Self is free from qualities.” That thing which is so deep, which belongs to all, it either—as I have already said—has ALL qualities, or it has none. You, to whom I am speaking now, your qualities, good and bad, are all mine. I am perfectly willing to accept them. They are all right enough and in place—if one can only find the places for them. But I know that in most cases they have got so confused and mixed up that they cause great conflict and pain in the souls that harbor them. If you attain to knowing yourself to be other than and separate from the qualities, then you will pass below and beyond them all. You will be able to accept ALL your qualities and harmonize them, and your soul will be at peace. You will be free from the domination of qualities then because you will know that among all the multitudes of them there are none of any importance!

If you should happen some day to reach that state of mind in connection with which this revelation comes, then you will find the experience a most extraordinary one. You will become conscious that there is no barrier in your path; that the way is open in all directions; that all men and women belong to you, are part of you. You will feel that there is a great open immense world around, which you had never suspected before, which belongs to you, and the riches of which are all yours, waiting for you. It may, of

course, take centuries and thousands of years to realize this thoroughly, but there it is. You are just at the threshold, peeping in at the door. What did Shakespeare say? “To thine own self be true, and it must follow as the night the day, thou can’st not then be false to any man.” What a profound bit of philosophy in three lines! I doubt if anywhere the basis of all human life has been expressed more perfectly and tersely.

One of the Upanishads (the Maitrayana-Brahmana) says: “The happiness belonging to a mind, which through deep inwardness (or understanding) has been washed clean and has entered into the Self, is a thing beyond the power of words to describe: it can only be perceived by an inner faculty.” Observe the conviction, the intensity with which this joy, this happiness is described, which comes to those whose minds have been washed clean (from all the silly trumpery sediment of self-thought) and have become transparent, so that the great universal Being residing there in the depths can be perceived. What sorrow indeed, what, grief, can come to such an one who has seen this vision? It is truly a thing beyond the power of words to describe: it can only be PERCEIVED—and that by an inner faculty. The external apparatus of thought is of no use. Argument is of no use. But experience and direct perception are possible; and probably all the experiences of life and of mankind through the ages are gradually deepening our powers of perception to that point where the vision will at last rise upon the inward eye.

Another text, from the Brihad-Aranyaka Upanishad (which I have already quoted in the paper on “Rest”), says: “If a man worship the Self only as his true state, his work cannot fail, for whatever he desires, that he obtains from the Self.” Is that not magnificent? If you truly realize your identity and union with the great Self who inspires and informs the world, then obviously whatever you desire the great Self will desire, and the whole world will conspire to bring it to you. “He maketh the winds his angels, and the flaming fires his ministers.” [I need not say that I am not asking you to try and identify yourself with the great Self universal IN ORDER to get riches, “opulence,” and other things of that kind which you desire; because in that quest you will probably not succeed. The Great Self is not such a fool as to be taken in in that way. It may be true—and it is true—that if ye seek FIRST the Kingdom of Heaven all these things shall be added unto you; but you must seek it first, not second.]

Here is a passage from Towards Democracy: “As space spreads everywhere, and all things move and change within it, but it moves not nor changes,

“So I am the space within the soul, of which the space without is but the similitude and mental image;

“Comest thou to inhabit me, thou hast the entrance to all life—death shall no longer divide thee from whom thou lovest.

“I am the Sun that shines upon all creatures from within— gazest thou upon me, thou shalt be filled with joy eternal.”

Yes, this great sun is there, always shining, but most of the time it is hidden from us by the clouds of which I have spoken, and we fail to see it. We complain of being out in the cold; and in the cold, for the time being, no doubt we are; but our return to the warmth and the light has now become possible.

Thus at last the Ego, the mortal immortal self—disclosed at first in darkness and fear and ignorance in the growing babe—FINDS ITS TRUE IDENTITY. For a long period it is baffled in trying to understand what it is. It goes through a vast experience. It is tormented by the sense of separation and alienation—alienation from other people, and persecution by all the great powers and forces of the universe; and it is pursued by a sense of its own doom. Its doom truly is irrevocable. The hour of fulfilment approaches, the veil lifts, and the soul beholds at last ITS OWN TRUE BEING.

We are accustomed to think of the external world around us as a nasty tiresome old thing of which all we can say for certain is that it works by a “law of cussedness”—so that, whichever way we want to go, that way seems always barred, and we only bump against blind walls without making any progress. But that uncomfortable state of affairs arises from ourselves. Once we have passed a certain barrier, which at present looks so frowning and impossible, but which fades into nothing immediately we have passed it—once we have found the open secret of identity—then the way is indeed open in every direction.

The world in which we live—the world into which we are tumbled as children at the first onset of self-consciousness—denies this great fact of unity. It is a world in which the principle of separation rules. Instead of a common life and union with each other, the contrary principle (especially in the later civilizations) has been the one recognized—and to such an extent that always there prevails the obsession of separation, and the conviction that each person is an isolated unit. The whole of our modern society has been founded on this delusive idea, WHICH IS FALSE. You go into the markets, and every man’s hand is against the others—that is the ruling principle. You go into the Law Courts where justice is, or should be, administered, and you find that the principle which denies unity is the one that prevails. The criminal (whose actions have really been determined by the society around him) is cast out, disacknowledged, and condemned to further isolation in a prison cell. ‘Property’ again is the principle which rules and determines our modern civilization—namely that which is proper to, or can be appropriated by, each person, as AGAINST the others.

In the moral world the doom of separation comes to us in the shape of the sense of sin. For sin is separation. Sin is actually (and that is its only real meaning) the separation from others, and the non-acknowledgment of unity. And so it has come about that during all this civilization-period the sense of sin has ruled and ranged to such an extraordinary degree. Society has been built on a false base, not true to fact or life—and has had a dim uneasy consciousness of its falseness. Meanwhile at the heart of it all—and within all the frantic external strife and warfare—there is all the time this real great life brooding. The kingdom of Heaven, as we said before, is still within.

The word Democracy indicates something of the kind—the rule of the Demos, that is of the common life. The coming of that will transform, not only our Markets and our Law Courts and our sense of Property, and other institutions, into something really great and glorious instead of the dismal masses of rubbish which they at present are; but it will transform our sense of Morality.

Our Morality at present consists in the idea of self-goodness—one of the most pernicious and disgusting ideas which has ever infested the human brain. If any one should follow and assimilate what I have just said about the true nature of the Self he will realize that it will never again be possible for him to congratulate himself on his own goodness or morality or superiority; for the moment he does so he will separate himself from the universal life, and proclaim the sin of his own separation. I agree that this conclusion is for some people a most sad and disheartening one—but it cannot be helped! A man may truly be 'good' and 'moral' in some real sense; but only on the condition that he is not aware of it. He can only BE good when not thinking about the matter; to be conscious of one's own goodness is already to have fallen!

We began by thinking of the self as just a little local self; then we extended it to the family, the cause, the nation—ever to a larger and vaster being. At last there comes a time when we recognize—or see that we SHALL have to recognize—an inner Equality between ourselves and all others; not of course an external equality—for that would be absurd and impossible—but an inner and profound and universal Equality. And so we come again to the mystic root-conception of Democracy.

And now it will be said: "But after all this talk you have not defined the Self, or given us any intellectual outline of what you mean by the word." No—and I do not intend to. If I could, by any sort of copybook definition, describe and show the boundaries of myself, I should obviously lose all interest in the subject. Nothing more dull could be imagined. I may be able to define and describe fairly exhaustively this inkpot on the table; but for you or for me to give the limits and boundaries of ourselves is, I am glad to say, impossible. That does not, however, mean that we cannot FEEL and be CONSCIOUS of ourselves, and of our relations to other selves, and to the great Whole. On the contrary I think it is clear that the more vividly we feel our organic unity with the whole, the less shall we be able to separate off the local self and enclose it within any definition. I take it that we can and do become ever more vividly conscious of our true Self, but that the mental statement of it always does and probably always will lie beyond us. All life and

all our action and experience consist in the gradual manifestation of that which is within us—of our inner being. In that sense—and reading its handwriting on the outer world—we come to know the soul's true nature more and more intimately; we enter into the mind of that great artist who beholds himself in his own creation.

END
