Dear Keith,
attached file contains results of analysis of anomalous rings in Yamal material for 100BC - 2000 AD.

I forgot to inform you about one more thing. We have organized data bank of Russian tree-ring chronologies. Unfortunately (for you), in Russian.
<http://ipae.uran.ru/dendrochronology/>
(and then click on the icon in the bottom (in center) of page).
This databank is made for archeologists and people that need to date woody constructions and etc. The aim is to give them information about where and what kind of chronologies there are in Russia. For some locations chronology is available or links to other databanks, for others - information only. Site is still filling up. If you are interested to see you can ask Vladimir Shishov to translate. By the way, you can remind him about my request to place chronologies of their lab in this bank.

Best regards

Rashit Hantemirov
