

LOCKDOWN SCEPTICS

STAY SCEPTICAL. CONTROL THE HYSTERIA. SAVE LIVES.

Is Dr Geert Vanden Bossche Right That “Vaccination Amidst a Pandemic Creates an Irrepressible Monster”?

Dr Geert Vanden Bossche [describes himself](#) as an independent virologist and vaccine expert who was formerly employed at GAVI and the Bill and Melinda Gates Foundation.

This week he wrote an [open letter](#) appealing to “all authorities, scientists and experts around the world, to whom this concerns: the entire world population” to immediately halt mass Covid vaccination, claiming there is compelling evidence that the mass rollout will dramatically worsen the consequences of the pandemic.

Entitling his letter, “Why mass vaccination amidst a pandemic creates an irrepressible monster”, he writes:

Basically, we'll very soon be confronted with a super-infectious virus that completely resists our most precious defence mechanism: The human immune system.

From all of the above, it's becoming increasingly difficult to imagine how the consequences of the extensive and erroneous human intervention in this pandemic are not going to wipe out large parts of our human population. One could only think of very few other strategies to achieve the same level of efficiency in turning a relatively harmless virus into a bioweapon of mass destruction.

He concludes:

If we, human beings, are committed to perpetuating our species, we have no choice left but to eradicate these highly infectious viral variants. This will, indeed, require large vaccination campaigns. However, NK cell-based vaccines will primarily enable our natural immunity to be better prepared (memory!) and to induce herd immunity (which is exactly the opposite of what current COVID-19 vaccines do as those increasingly turn vaccine recipients into asymptomatic carriers who are shedding virus). So, there is not one second left for gears to be switched and to replace the current killer vaccines by life-saving vaccines.

*I am appealing to the WHO and all stakeholders involved, no matter their conviction, to immediately declare such action as **THE SINGLE MOST IMPORTANT PUBLIC HEALTH EMERGENCY OF INTERNATIONAL CONCERN.***

²⁴ Dr Bossche makes a number of dubious assumptions in his doom-laden prognosis and his solution (despite his striking confession that COVID-19 is a “a relatively harmless virus”) is yet more vaccines, just of a different kind. The Zero Covid-like aim is to “eradicate these highly infectious viral variants”.

Dr Clare Craig of [HART](#) comments:

Dr Bossche is wrong on vaccines driving variants that evade the natural immune response. I'm also yet to be convinced the Kent variant was any more infectious than the original. The ONS Survey had it falling before Lockdown 3 was announced. At peak cases ONS reckoned 61% of COVID cases in England were new variant, 33% in Northern Ireland, 22% in Scotland and only 5% in Wales – yet all had a winter wave.

We await detailed scientific rebuttals of the various claims in the paper. But the current feeling among a number of sceptical scientists we are in touch with is that the paper greatly exaggerates the capacity of viral variants to evade the human immune system. Upon encountering a virus like SARS-CoV-2, a large repertoire of [T-cell epitopes](#) is [produced](#) which are capable of dealing with most variants.

There is also the question of some vaccines (*cough*) making the recipient more susceptible to “cytokine storm” reactions to the wild virus.

Really don't like the new format for comments on here. Feels like we are all in separate rooms and as such, loses the collective feel.

I did think of the forums but it will be the same. Why don't we just colonise one of the articles and use it as a comment page for the day?

I guess what will happen is water will find its natural level and you find that some articles will attract more attention.Don't forget when the number of comments went past 2000 it became hard to navigate.
