

# Lancet Letter Demolishes Vaccination

Says vaccination does not even slow down the pandemic

An amazing Lancet letter "[The epidemiological relevance of the COVID-19-vaccinated population is increasing](#)" was just published.

The largest significance is that the article WAS ALLOWED TO BE PUBLISHED BY LANCET. This means that the tide of scientists being scared by government/globalists/Big Pharma funding is turning, and the truth is coming out at the highest levels of science such as the Lancet.

The article is great, but the things it is saying are a regular subject of our discussion.

- In the UK it was described that secondary attack rates among household contacts exposed to fully vaccinated index cases was similar to household contacts exposed to unvaccinated index cases (25% for vaccinated vs 23% for unvaccinated).
- 12 of 31 infections in fully vaccinated household contacts (39%) arose from fully vaccinated epidemiologically linked index cases.
- Peak viral load did not differ by vaccination status or variant type

- In Germany, the rate of symptomatic COVID-19 cases among the fully vaccinated (“breakthrough infections”) is reported weekly since 21. July 2021 and was 16.9% at that time among patients of 60 years and older [[2]]. This proportion is increasing week by week and was 58.9% on 27.
- In Israel a nosocomial outbreak was reported involving 16 healthcare workers, 23 exposed patients and two family members. The source was a fully vaccinated COVID-19 patient. The vaccination rate was 96.2% among all exposed individuals (151 healthcare workers and 97 patients). Fourteen fully vaccinated patients became severely ill or died, the two unvaccinated patients developed mild disease
- US Centres for Disease Control and Prevention (CDC) identifies four of the top five counties with the highest percentage of fully vaccinated population (99.9–84.3%) as “high” transmission counties
- A similar situation was described for the UK. Between week 39 and 42, a total of 100.160 COVID-19 cases were reported among citizens of 60 years or older. 89.821 occurred among the fully vaccinated (89.7%), 3.395 among the unvaccinated (3.4%) [[3]].

This reinforces my opinion that the Covid Cult is coming apart at the seams and the failure of “Covid vaccines” is no longer a secret.

The key to any sort of narrative revolution of information warfare is NOT to convince your crazy Fauci-worshipping neighbor. The point of it is to convince decision makers and opinions makers that they are holding onto untenable positions.

Please spread this article, or the Lancet article with your own comments, as widely as possible. It will make it increasingly impossible to ignore.

People who profess how ”they believe in science” usually least understand science and can only understand Dr Leana Wen from CNN or Dr Fauci, so doubtfully they can even understand the text of the Lancet article. Please explain the meaning of this article to them. Tell them “the biggest medical science magazine just published an article saying vaccines are trash and do not even slow down the pandemic”.

If they show any interest, tell them that hundreds of thousands of terrified people are desperately seeking to get “un-vaccinated”. Ask them why do they want increasingly frequent boosters.

@justin\_hart

HAHAHAHAHAHA! We told you.

Boosters in the UK will now move from 6 months to 3 months.

The kill shot: "It appears to be grossly negligent to ignore the vaccinated population as a possible and relevant source of transmission when deciding about public health control measures."

therefore vax passports useless... and stupid... and moronic... and evil...

The vaccine is dead! Long live the vaccine!

Seriously, though, the psychos don't give a shit. It's long since had nothing to do with "stopping covid". That narrative died over the summer when the XiDC admitted that it wouldn't stop transmission at all.

It's taken on a life almost entirely separated from covid. Now it's all about raising vaccination rates for no other purpose than raising vaccination rates.
