Hi all,

Royden Saah (Island Conservation, visiting scientist with CSIRO) and Steve Henry (CSIRO) were involved in an interview for the Australian national broadcaster (ABC) program called Lateline (aired last night). This was part of his trip to the field where we are monitoring mouse populations in grain production areas for a project funded by the Grains Research and Development Corporation.

The link to the online story is below. At the bottom of the page is a clip of the program that aired last night.

Well done to Steve and Royden – I think it all came across very well.

Regards,

Peter.
