Hi Fred and John,

I have a question about the paper that Karl is writing. There is a statement regarding "Fixed Private Alleles". I remember a conversation regarding terminology of, "locally fixed alleles".

I think, knowing that this is a keystone aspect of gene drive safety and DARPA and others in the published literature have used 'spatially limited', what do you want to have in the paper:

1. Fixed Private Alleles
2. Locally Fixed Alleles
3. Spatially Fixed Alleles

Thanks for weighing in!

Regards,
rs
