History of Condition

On Arrival/HPC Free Text

Called to attend a gentleman who was reported to behaving strangely. Salivating profusely and making strange noises. Alerted on arrival that a female at this property today was taken to hospital in respiratory arrest due to unknown cause. ? Drug related.

Approached with caution and due to recent events within Salisbury and the nerve agent attack, crew decided to don PPE by way of suits, masks and shoe protection.

Steps 1-2-3 followed as per HAZMAT guidelines.

Arrived to find gentleman GCS 11, increased tone to upper limbs, making incomprehensible sounds, leaning up against a wall. Patient was not responding to commands, had pinpoint pupils, was sweating and salivating profusely. Initial observations were as recorded.

No drug paraphenalia present initially, drugs use was denied by the occupant.

EOC informed, HART requested. Critical care requested. Bronze Requested.

19:25 patient slowly collapsed to floor, became gcs 8.

Airway management and ventilatory support as noted. Naloxone given Intra-nasally. IV access attempted but failed. IO access achieved

A- Bilateral NP airways, Trismus present. Profuse salivation. Suctioning required.

B- Self ventilating, assisted at times. SPO2 and ETCO2 remained within safe limits at all times.

C- Haemodynamically stable. Nil acute ECG changes.

D- Pupils pinpoint and non reactive, upwards right gaze

E- Normothermic, normoglycaemic, No obvious signs of assault or acute head injury.

Treated such as a nerve agent incident with Atropen as charted.
