

!! Air defense missile hits Konstantinovka, short video analysis

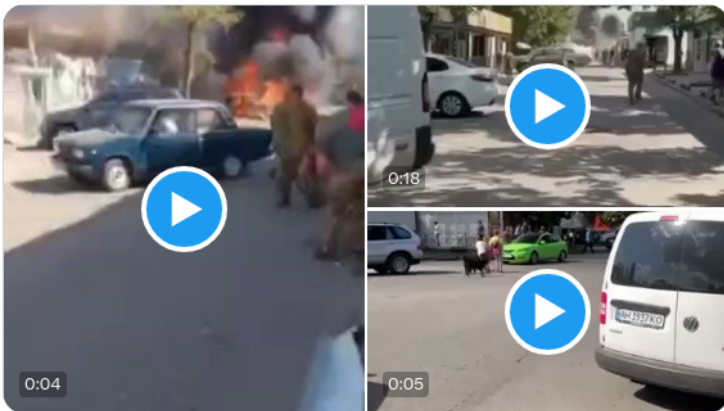

A tragedy, RIP to the dead. There were at least 3 people under the explosion, that had no chance. Poor souls.

1/

Aftermath ...

2/

Now it is known about 20 wounded and 16 dead, including 1 child, said the Prime Minister of Ukraine Shmygal.

Tragedy ... RIP

3/

aftermath of the tragedy ...

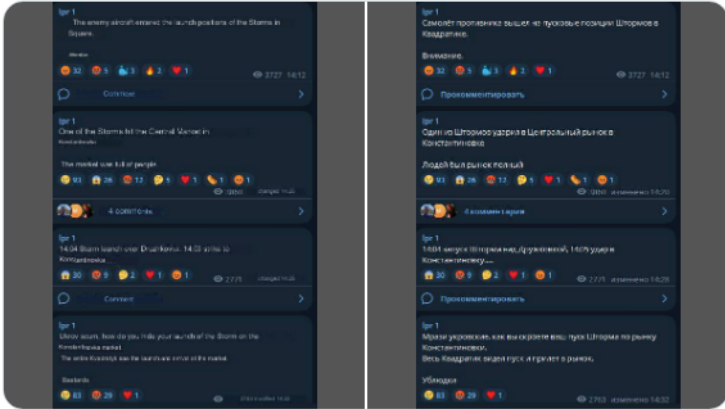

4/

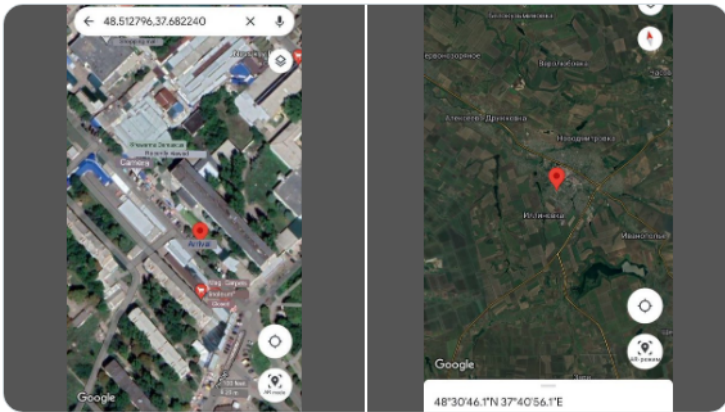

Luhansk TG channels say, it was a misfired Storm Shadow and everybody saw it. 🤖

5/

The people saw it

!! 🚨 People look towards the sound of launch.

You can hear it 2 seconds before impact.

It came from the Ukrainian side. ...

Why did Zelensky publish the video from Konstantinovka, which proves that it was friendly fire?

The Ukrainian media and popular blogs somehow missed the sound of the rocket launch in the video from Konstantinovka posted by Zelensky.

Because Zelensky was in hurry to the joint press conference with the Prime Minister of Denmark and then a meeting with the US Secretary of State.

Perfect opportunity to accuse Russia of terrorism and get more aid.

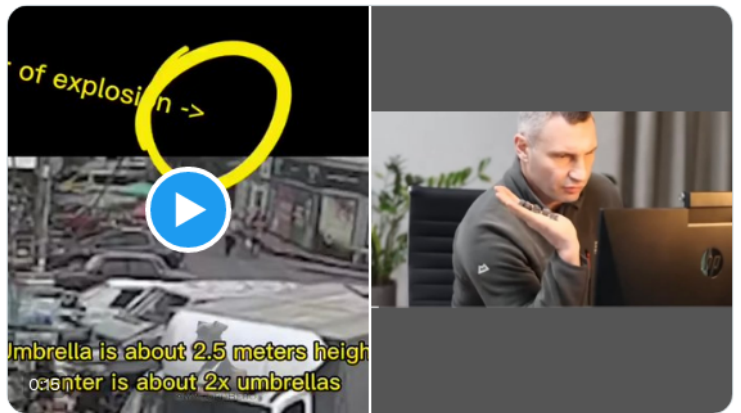

7/

Due to the pallets pattern, which are typical for an air defense missiles, I think it was an air defense missile.

Note, other sources claim it was a Storm Shadow. But why would they launch it so close to the border and risk losing a jet?

Center of explosion was roughly 5m/16 ft

Folks if this does not convince you, nothing will.

Instead of screaming slogans provide an argument.

"Milinfoive" investigation into the explosion in Konstantinovka:

Judging by the generously published footage, the arrival through the market fell on the area of the jewelry store "Zolotiy Vik" (Golden Age, marked in blue). Next to it is now the Smart mobile accessories store (marked in yellow). Also important for georeferencing the area is the Kapital pawnshop, located at the corner of the T-junction, opposite the Golden Age (marked in red).

As you can see in the video, a second before arrival, local residents look into the sky in the direction of Druzhkovka controlled by the AFU (marked in green), from where the object flies (marked in orange), after which an air explosion occurs near the Golden Age, which is not typical for a conventional rocket, projectile or air bombs, but characteristic of an anti-aircraft or anti-radar missile.

In the local chats of the residents of Druzhkovka and Kramatorsk, there were also reports of the presence of aircraft in the air, which obviously cannot be Russian, since the distance to the front line is more than 30 km. In addition, the aircraft of the AFU have already carried out unsuccessful launches of AGM-88 HARM missiles at Konstantinovka.

Thus, a Ukrainian missile, most likely launched from an aircraft, flew from UAF-controlled Druzhkovka along Tsiolkovsky Street in Konstantinovka and exploded above the ground near the Golden Age jewelry store.

Your favorite Bild journalist says the same ...

#NewsMap

Judging from where people look (hearing the sound from) before the impact and a likely reflection of the incoming projectile on a car, the rocket that hit #Kostyantynivka came from the North West.

Hope, its is possible to state that fact without being called names.
